Roadside Danger Tree Abatement Plan
McKinney Fire
Klamath National Forest
Happy Camp/Oak Knoll and Salmon-Scott River Ranger District

Fell danger trees in areas where suppression activities created hazard trees that would hit designated travel routes. Danger trees can be abated (felled) near designated features to provide for immediate firefighter and/or public safety. If after felling, downed trees pose a threat to firefighter and/or public safety, then remove and deck these trees in a location that does not pose a threat to firefighter and/or public safety. All work will be done only on National Forest System lands. Distances from the target feature are based on the following priorities:

Priority 1 features:

<u>Size Class</u>	<u>Size Class Definition</u>	<u>Baseline Slope Distance (feet above/flat/below road)*</u>	<u>Maximum Slope Distance (feet above/flat/below road)*</u>	<u>Minimum Slope Distance (feet above/flat/below road)*</u>
Small	less than 14.0 inches stump diameter	100/100/75	200/200/150	75/75/50
Large	Greater than or equal to 14.0 inches stump diameter	200/150/150	250/250/200	125/125/75

*Distances shown above are generally 1 ½ of the tree height from the target road that is at risk above the road and on flat ground and one times the tree height below the road.

Priority 2 features:

<u>Size Class</u>	<u>Size Class Definition</u>	<u>Baseline Slope Distance (feet above/flat/below road)**</u>	<u>Maximum Slope Distance (feet above/flat/below road)**</u>	<u>Minimum Slope Distance (feet above/flat/below road)**</u>
Small	less than 14.0 inches stump diameter	75/100/75	200/200/150	75/75/50
Large	Greater than or equal to 14.0 inches stump diameter	150/100/100	250/200/150	100/100/75

**Distances shown above are approximately one times the tree height above and below the feature and in flat areas.

In addition, material meeting the following utilization and processing specifications shall be skidded to, processed, and decked at pre-approved decking locations.

Stump Height:

Stumps shall be cut to a height of not more than 12 inches from the high side of the stump, unless approved in writing by the Agency Administrator Representative.

Danger Tree Abatement Slash Plan

1. Process and deck logs that meet Utilization specifications pursuant to the Tree Abatement Plan: Douglas-Fir and other Coniferous species over 10" DBH to 8" small end 10 feet in length.
2. Where practical. All species of logs 4"- 8" DBH, stack in a separate pile for firewood, ~~except for Pine and Alder.~~
3. Mechanically pile remaining slash (tops and limbs) as compact as possible as described in the Tree Abatement Plan. Cover pile with polyethylene to cover approximately 4' X 4'. Pile locations will be inventoried and communicated to the forest to be burned.

Repair Group Slash Plan –

1. In order of precedence: chip, lop, and scatter mMechanically piled slash pursuant to the Tree Abatement Plan.

SLASH TREATMENT SPECIFICATIONS

"Stack"

Logging slash which does not meet Utilization Standards, is greater than four inches diameter (large end), and ten feet or more in length shall be STACKED along and be accessible from the roadside for disposal by Forest Service. Stacks shall not be placed against Residual live trees or Protected Improvements, such as ditches, drainage structures, or on slopes which exceed 65%. Alder and Pine shall not be included in stacks.

"Machine Pile"

In areas less than 30% slope and where concentrations of slash exceed 60% ground cover and 12" depth, logging slash which does not meet Utilization Standards or "Stack" standards shall be limbed and bucked to lengths no greater than 10 feet and Machine piled. Machine piles shall be piled as compact as possible, reasonably free of soil, and to facilitate burning.

"Chip"

Chip Mechanically piled slash and spread to a height not more than 4-6 inches. Chips shall be scattered on landings or skid trails adjacent to Forest Service system roads. Chips shall not be located on or in improvements, such as ditches or culverts. Excessive quantities of chips will be dispersed at locations identified on the repair map and spread out to a depth of 4 inches deep or less.

"Scatter"

Slash shall be lopped and scattered to provide up to 60% ground cover and reduce heavy slash concentrations. Slash shall not exceed a depth of 12 inches. Slash shall not be scattered against residual trees, or on or against protected improvements.

Fatigue and Stress

Accumulated (**Chronic**) Fatigue is defined as fatigue from which normal rest does not produce recovery. Accumulated fatigue is often caused by extended periods of stress with inadequate recovery periods, which results in:

- *decreased productivity

Behavioral indicators:

Physiological indicators: confused, poor problem solving, poor abstract thinking poor attention/decisions poor concentration/memory extreme.

Recommendations for chronic fatigue/stress are: Take longer periods of rest/recovery, ensure workers are adequately rested before they begin work shifts. Provide periodic rest breaks to allow physical and mental recovery. Alternate between heavy and light tasks, eat well-balanced meals regularly, with energy supplements during periods of high exertion. Maintain hydration and ensure workers maintain good personal hygiene. Maintain high standards of physical fitness and work capacity.
