LCES                      INCIDENT RESPONSE GUIDE                      WORK-REST GUIDELINES

**SAFETY THOUGHT**

**75% of Americans are chronically dehydrated. At 2% dehydration, performance will fall off by 10-20% and is the #1 trigger of daytime fatigue.**

**MAJOR HAZARDS AND RISKS**

A - Driving, narrow mountainous roads	D - Fire Repair Equipment	G - Public (hunting, shooting, etc.)
B - Steep Slopes	E - Hazard Trees	H - Communications
C - Dehydration	F - Fatigue	I - Complacency

**USE THE INCIDENT RESPONSE POCKET GUIDE DAILY**

**Assess The Situation                      Identify Hazards                      Determine Hazard Controls**

**PROCEDURAL APPROACH TO SAFETY**

- In a fire situation there are subjective hazards that we as firefighters create, and there are objective hazards such as fire entrapment, snags, rolling debris, and terrain that are inherent to firefighting. The subjective hazards we have control over just by using our attitudes and abilities. The objective hazards we cannot eliminate. The possibility of injury or entrapment is always there, the probability may be large or small. We must take steps to reduce the risks associated with our actions. By using a set procedure each operational period, we can minimize exposure to hazards and better ensure our safety by taking the following steps:
- Determine what the assignment is
- Identify the hazards
- Analyze the risks
- Implement steps to ensure safety
- Re-analyze the situation as it changes
