**Danger Tree Abatement Plan**  
**McKinney Fire**  
**Klamath National Forest**  
**Happy Camp/Oak Knoll Ranger District & Salmon-Scott River Ranger District**

Fell danger trees in areas where suppression activities created hazard trees that would hit designated travel routes. Danger trees can be abated (felled) near designated features to provide for immediate firefighter and/or public safety. If after felling, downed trees pose a threat to firefighter and/or public safety, then remove and deck these trees in a location that does not pose a threat to firefighter and/or public safety. All work will be done only on National Forest System lands. Distances from the target feature are based on the following priorities:

**Priority 1 Features**

<u>Size Class</u>	<u>Size Class Definition</u>	<u>Baseline Slope Distance (feet above/flat/below road)*</u>	<u>Maximum Slope Distance (feet above/flat/below road)*</u>	<u>Minimum Slope Distance (feet above/flat/below road)*</u>
Small	Less than 14.0 inches stump diameter	100/100/75	200/200/150	75/75/50
Large	Greater than or equal to 14.0 inches stump diameter	200/150/150	250/250/200	125/125/75

\*Distances shown above are approximately 1 ½ times the tree height from the target feature that is at risk above the road and on flat ground and one times the tree height below the road.

**Priority 2 Features**

<u>Size Class</u>	<u>Size Class Definition</u>	<u>Baseline Slope Distance (feet above/flat/below road)**</u>	<u>Maximum Slope Distance (feet above/flat/below road)**</u>	<u>Minimum Slope Distance (feet above/flat/below road)**</u>
Small	Less than 14.0 inches stump diameter	75/100/75	200/200/150	75/75/50
Large	Greater than or equal to 14.0 inches stump diameter	150/100/100	200/200/150	100/100/75

\*\*Distances shown above are approximately one times the tree height above and below the Feature and in flat areas.

In addition, material meeting the following utilization and processing specifications will be skidded to, processed, and decked at pre-approved decking locations.

**Utilization and Processing Specifications**

Product and Species	Merchantable Tree		Minimum Piece Requirements	
	Minimum DBH (inches)	Number of Minimum Pieces Per Tree	Length (Feet)	Diameter Inside Bark Small End (inches)
ALL	10.0	1	10	8.0

**Slash:**

- a.) Slash will be (in order of preference): chipped, lopped and scattered, or piled in a manner that will not impact man-made structures including but not limited to water tanks, water lines, irrigation ditches, roads, road borrow ditches, and water diversion structures.
- b.) Material extending three (3) feet or more outside the edge of a pile will be trimmed.
- c.) An eight (8) foot slash bay will be cleared of all but fine material around each machine pile and
- d.) When needed, an appropriate fire line will be cleared to mineral soil around the outer ring of the slash bay.
- e.) When lopped and scattered, all branches must be cut from main stem when main stem exceeds three (3) inches in diameter
- f.) Slash or chips must be spread to a height of not more than one (1) foot. Tree stems will be bucked, as necessary, to meet this height requirement and to avoid "jack-strawing" trees on top of one another.
- g.) All piles will be reasonably compact and free of soil to facilitate burning and will be constructed of such size and at such distance from trees so that burning will not result in unnecessary damage to residual timber.

**Stump Height:**

Stumps will be cut to a height of not more than 12 inches from the high side of the stump, unless approved in writing by the Agency Administrator Representative or their designee.

# HEALTH AND SAFETY MESSAGE

REMEMBER-Everyone is considered a Safety Officer

You are responsible for your own actions!!!

INCIDENT: McKinney Fire

DATE: 09/30-10/1/2022 TIME: 0700-1900

**S**tep Back  
**T**hink  
**O**rganize  
**P**roceed

The cornerstone of safety is to take time to assess the job and its environment. In order to encourage this principle, please consider using the “STOP” acronym to act as a reminder to pursue all jobs in a safe manner

## Situational Awareness

Situation awareness involves being aware of what is happening in the vicinity to understand how information, events, and one's own actions will impact goals and objectives, both immediately and in the near future.

### **Risk Management**

Identify known hazards and risks

### **Communication Tips**

- Put more emphasis on eye-to-eye communication. Delivering messages or information orally is the best way to ensure a complete understanding of the material.
- What? Speak up! Most people need to speak louder.
- Question whether what you are saying is understandable or if it can be made clearer. Many miscommunications are a result of vagueness or ambiguity.
- Listen to comments or questions co-workers may have.
- Giving correct answers to these questions often provides a greater sense of understanding and can increase productivity and dedication.

## **Communication Responsibilities**

- **Briefings** – All resources require briefings, use the briefing checklist on the back page of the IRPG
- **Debrief Actions** – Conduct AAR's to identify lessons learned
- **Communicate Hazards to others**
- **Acknowledge Messages**
- **Ask if you do not know** – Ask questions in unfamiliar situations
