## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 10	<b>TYPE OF FIRE:</b> Wildfire

### OUTPUTS

#### FIRE BEHAVIOR

##### GENERAL:

No forward fire progression is expected on the fire. Interior islands will continue to burn out most are well in the interior. Identify areas where there is a potential for reburn near containment lines. Expect large dust devils to develop on south and west facing slopes, these have the potential to carry hot embers across the lines. Make sure lookouts have a good view of the fire, especially since the smoke may limit visibility early in the day.  
With these dry fuels, spotting will be problematic and should be short range (100-300 ft) for the most part and from rollout. Several torching trees on a ridge top can spot up to 0.3 miles. The Probability of Ignition is 90%  
Minimal fire activity is expected at night.

##### SPECIFIC:

**Branch I:** No forward progression is expected. With the deep mop up the chances of the fire becoming established outside of the lines has been greatly reduced.

**Branch V:** No forward fire progression is expected. There is some heat on the IR close to the lines mainly in Div. Z. Identify areas of continuous fuels near the lines as this would be the most likely avenue for an escape fire. With the wind direction any escape will be aligned with the wind

**Branch X:** No forward fire progression is expected. The potential for reburn is still present in Div. D however, with the predicted winds the fire should burn back on itself. With the abundant timber throughout the Branch torching trees near the line will continue to be problematic.

**Branch XX:** No forward fire progression is expected. Interior fuels will continue to burn out. With the wind alignment any fire that becomes established outside the lines will actively back and flank.

**IA:** With the state of the fuels, expect any new start to be resistant to control. For fire aligned with slope and wind, expect rapid rates of spread with the potential for crown runs where dense canopies are present.

**AIR OPERATIONS:** Limited smoke production on the fire minimal impacts to air operations.

### SAFETY

Have Lookouts posted in places where they can see fuels and fire below crews, even in smoky conditions.  
Do not become complacent because we are in mop up, fire behavior potential is bordering on extreme.

**Operation Period: 8/10/22 to 8/11/22 Shift: 0700-0700**

**Safety Message**

**Complacency is a Hazardous Attitude... Don't go there!**

**With many portions of the fire reaching containment, some of our assignments and tactics are changing.**

*As we move from suppression > mop-up > patrol > suppression repair, we need to assure that we are adhering to the 10 and 18s!*

Pay specific attention to:

- Order #7- Maintain prompt communications with your forces, your supervisor, and adjoining forces.
- Order #8- Give clear instructions and be sure they are understood.
- Watch out #5- Uninformed on strategy, tactics, and hazards.
- Watch out #6- Instructions and assignments not clear.
- Watch out #17- Terrain and fuels make escape to safety zones difficult.

**Safely Working With Heavy Equipment**

*IRPG page 85*

- Maintain your distance from active heavy equipment. *Stay at least 100 feet in front and 50 feet behind the equipment.*
- Only the operator can ride on the equipment.
- Never approach the equipment until you have eye contact with the operator, all implements have been lowered to the ground, and equipment has been idled down!
- Avoid working downhill from equipment where rolling material could jeopardize your safety.
- Night work is more dangerous due to reduced visibility. Use headlamps so operator can see you.
- Establish visual and radio communication methods prior to engaging.
- Communicate all hazards to the operator.
- Equipment operators have difficulty seeing ground personnel; take responsibility for your safety and all those around you.

**Powerline Safety**

*IRPG page 22-23*

- ✓ Communicate: Notify all responders of down electrical lines.
- ✓ Identify: Determine entire extent of hazard by visually tracking all lines; two poles in each direction, from the downed wire.
- ✓ Isolate: Flag and mark area around down wire hazards; post guards.
- ✓ Deny entry: Delay firefighting actions until hazard identification and flagging are complete, and/or confine actions to safe areas.
- ✓ Downed line on vehicle: Stay in vehicle until power company arrives. If vehicle is on fire, jump out with both feet together. Do not touch the vehicle. Keep feet together and shuffle or hop away.

*There are many down and damaged power lines in the Highway 96 and Klamath River Corridor.*

**Always treat downed wires as energized!**

# **COVID-19 PREVENTION INFORMATION**

## **MAINTAINING A HEALTHY WORKFORCE**

from the COVID Advisor Team

All fire personnel are susceptible to contracting COVID-19. The health and well-being of all personnel must be a priority throughout the fire season. **Mask use, social distancing, and good hygiene** will support the health of fire personnel and are important ways to **prevent the spread of COVID-19 and maintain the health of all fire personnel.**

### **Self-Awareness/ Daily Health Screening**

**Separate yourself from others and notify your supervisor if you experience COVID-19 related symptoms** (fever or chills, cough – more than expected, shortness of breath or difficulty breathing, fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, congestion or runny nose, nausea or vomiting, diarrhea). Supervisors will use COVID precautions and facilitate COVID testing at the identified COVID testing locations.

### **COVID-19 Testing availability – (2) locations**

**McKinney Base Camp** (430 E. Prather St.) - **Adventure Medics**

**Klamath River Spike Camp** (28017 Hwy 96) - **Mountain Medics.**

Priorities for testing will be for those with COVID-related symptoms and potential exposures to COVID-positive individuals.

**Federal employees** enrolled in the **Screening Testing Program** can also access the identified testing location to meet their testing requirements. **Screening Testing is required weekly for federal employees in the program when the Community Levels are Medium or High.**

### **Sanitary and Personal Hygiene Practices**

Rigorous sanitary practices are important for reducing the transmission of infectious diseases. All personnel should cover their coughs and sneezes. Perform proper hand hygiene including handwashing or hand sanitizer use after touching potentially contaminated surfaces, removing face coverings, after using the restroom, and before eating or putting anything in their mouth.

### **Social Distancing and Mask Wearing**

Individuals should practice and remind others of social distancing of at least six feet apart. When social distancing is not possible, masks use is recommended. **Modules should limit close contact with other resources to insulate their module from potential exposures.**

**Current Community Level for Siskiyou County is Medium so mask wearing is optional unless social distancing cannot be maintained.** Community Levels are updated weekly by CDC.

## Human Resource Message

### Check your Temperature Gauge

For a lot of you here on the McKinney, fire fatigue, heat exhaustion, and troubles sleeping may be starting to wear on you. With the hard work and the long hours, you've been putting in, it is easy to get on edge and "on the edge" with each other. Let's guard against that by recognizing when our temperature gauge is reaching a critical point and take a 15-minute cooldown before we do something that's out of character that might have lingering repercussions.

Feel free to call/text or come by any time if you have questions, concerns, or just want to chat.

## The Five-D System for Effective Fireline Waterbars

To make effective waterbars, use the 5-D System: **D**istance, **D**iagonal, **D**ivert, **D**ischarge, and **D**issipate.

**Distance:** Waterbars must be placed the proper distance apart, based on slope. This keeps the area that accumulates runoff small enough to prevent damage. The table below gives the maximum distance between waterbars, or between a waterbar and the next upslope drainage break.

**Diagonal:** Don't bully the flow, lead it. Waterbars built directly across a fireline tend to fail. Waterbars built diagonal to the fireline lead the water off and work better. A simple rule is to build them at 30 degrees off perpendicular (see the illustration below).

**Divert:** A good waterbar will divert the water off the fireline. To do this the waterbar must be deep enough to handle all the flow for as long as it's needed. Excavation is much better than fill in making a durable and effective waterbar (a ditch or a dip beats a dike).

**Discharge:** Another feature of a good waterbar is that it will discharge the flow. A good waterbar is not a dam, it must have an open outlet.

**Dissipate:** Finally, a good waterbar should dissipate the flow just below the outlet to exhaust its eroding power and cause it to filter into the soil. This may require placing slash, rock, or debris below the outlet.

Fireline slope %	Maximum Distance Apart (feet)	<i>Recommended spacing for waterbars on firelines. Waterbars should be no further apart than this, but they may be closer. When in doubt, put in more. From: USDA-Forest Service, "Sale Administrator's Handbook"</i>

- Material in piles shall be cut <4' per individual piece.
- Maximum piles size 6' in diameter and 6' in height and minimum pile size shall be 4' in diameter and 4' in height.
- Piles shall be distinct and separate from each other allowing at least 6' between each pile
- Piles shall be placed to limit scorch potential to leave trees, not in contact with leave trees and built up slope from leave trees when possible
- At least 50% of material in the lower third of the piles shall be composed of small diameter material and attached fines to create a kindling core.
- All piles shall be covered with Kraft type wax paper (wax side up).
- Pile covering sheet shall be placed to cover the bottom 2/3 of the pile and cover 50% of the surface area of the pile at this level. The remaining 1/3 of the pile shall be placed over the cover sheeting anchoring all four corners and the middle of the cover sheeting securely.
- No piles shall be built on, or in contact with any tree stumps >10" diameter.
- Piles created on downed logs, the log in contact with any pile shall be bucked to create a 4' separation in the log (to break the continuity and limit fire spread if the log should be ignited).
- logs over 8" diameter generated from thinning shall be limbed with limb wood added to piles, cut to 4' lengths and dispersed a minimum of 6' separation from downed logs, leave trees and stumps.
- In some units specific pile placement will be required to avoid damage to sensitive plant colonies, maps with exclusion areas will be included, the exclusion areas will be clearly marked and defined by the COR before work takes place. Any piles constructed in exclusion areas will be moved by the contractor.

## FIRE SUPPRESSION REPAIR MESSAGE

Berms and push-piles should be spread to the extent feasible by back-blading with a tractor or with an excavator. Debris piled against standing timber should be pulled back while taking care not to damage growing stock with the tractor blade or an excavator bucket and thumb. At helispots, staging areas, and safety zones remove and/or breach berms so that runoff can be dissipated. Cross-drain these areas to effectively dissipate water as necessary.

Waterbreaks should be constructed at an approximately 45° angle at a minimum depth of 10” from the bottom of the cut to the top of the berm. Where possible, the discharge from the waterbreaks should be directed into vegetated areas to minimize erosive forces. Where dozerline or handline has crossed a watercourse, the channel should be cleared of soil and debris to re-establish the channel. Waterbreaks on handlines should be installed every 50’ or closer as needed.

Waterbreak maximum spacing:	Grade	0-10%	11-25%	26-50%	>50%
	Spacing	0-200'	150'	100'	75'

Roads used in fire suppression activities should be left in at least as good a condition as they were found. Gravel and soil surface roads should be watered to prevent excessive dust formation. Where suppression activities have damaged or rendered road drainage facilities non-functional, waterbreaks or drivable drainage dips should be installed for drainage. Inside ditches damaged from suppression activities should be cleaned and left unobstructed.

If any archaeological resources are located during suppression repair activities, work will stop in that location and the Suppression Repair Lead will be notified.
