FIRE BEHAVIOR

GENERAL:

Heat remains isolated to mainly burning stumps and heavy ground fuel well interior with limited threat to the control lines. Be heads up with forecasted increase in winds this afternoon, low RH's and fuels that are returning to critical dryness.

Fuels: Several years of persistent drought and a water year which has received less than 50% of normal rainfall, has the fire footprint within an area identified as "Extreme Drought." Fuels and fire danger are moving toward critical levels as we remain in what is historically the peak of fire season for northern California.

Energy Release Component (Oak Knoll): is **above the 90th** percentile at 64 (Fuel Model Y 90th percentile is 61)

1HR fuel moisture: 6% (-2) 10HR moisture: 8%(-1) 100 HR moisture 10%(-2) 1000 HR: 10% (-1)
Energy Release Component: 64 (+2) Burning Index: 42(+1) Probability of Ignition (PIG) <92%

Local Watchout Thresholds: 20' winds: 4< mph RH: <40% Temp: 75+ deg 1000hr moisture: <13%

Expected Surface Fire Behavior: (assumes 8 mph eye level wind and 50% slope)

Timber Understory (TU5) Timber with branches, shrubs:
Grass, Brush (2,SH7)

Flame length 8-9' and ROS 10-12 ch/hr head
Flame length 6-15 and ROS 28-47 ch/hr (GS2/SH7)

SPECIFIC:

McKinney Fire: The fire has not experienced perimeter growth for several weeks with the control lines being tested by hot, dry, and windy conditions during that timeframe. Infrared showing the amount of interior heat is diminishing but still present.

Initial Attack: Temperatures have warmed back-up to where any new starts have will likely pose suppression difficulty. Local knowledge is critical to navigate the network of roads to make access to any new fires and links to local pocket cards are provided below. Fuels, Weather and Topography are aligning to support rapid large fire growth on any new starts.

AIR OPERATIONS:

Weak mid-slope inversion mixing out by 1100.
Sunrise: 0626 Sunset: 1959

Know your local thresholds, forecasted weather, and see how they relate to local pocket cards.

Hazards & Risks

Is your truck S.E.C.U.R.E.?

- S**et parking brake
- E**nvironmental hazards mitigated
- C**hock the wheels
- U**nder carriage inspected
- R**oll up windows
- E**nsure equipment is safe to leave

What do you look for in a fireline parking spot? Look up, look down, look all around.

- Look for cold black, bare soil, sparsely vegetated areas, plowed fields, or other natural or humanmade barriers.
- Be careful to not get stuck in soft soils.
- Complete a walk around looking for ash pits, penetrating stobs, unburned adjacent fuel, snags, or other hazards that may damage the apparatus.
- Do not block the access or egress of others. Be careful to not block dozer lines, safety zones, or helispots.
- Back in and face your danger when turning around.
- Chock your tires.

Human Factor Barriers to SA: To date, it has been a demanding fire season with tough assignments, long road trips and extended times away from home, with little time to fully rest and recuperate. This can lead to distractions to our situational awareness and impede our decision-making and stress our relationships with coworkers. Some factors to consider:

- Inexperience level with local factors
- Distractions from primary task
- Fatigue
- Stress reactions
- Hazardous attitudes
- Review your IRPG for more information on these factors

COVID-19 PREVENTION INFORMATION

MAINTAINING A HEALTHY WORKFORCE

from the COVID Advisor Team

All fire personnel are susceptible to contracting COVID-19. The health and well-being of all personnel must be a priority throughout the fire season. **Mask use, social distancing, and good hygiene** will support the health of fire personnel and are important ways to **prevent the spread of COVID-19** and **maintain the health of all fire personnel**.

Self-Awareness/ Daily Health Screening

Separate yourself from others and notify your supervisor if you experience COVID-19 related symptoms (fever or chills, cough – more than expected, shortness of breath or difficulty breathing, fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, congestion or runny nose, nausea or vomiting, diarrhea). Supervisors will use COVID precautions and facilitate COVID testing at the identified COVID testing locations.

COVID-19 Testing availability – (2) locations

McKinney Base Camp (430 E. Prather St.) - **Adventure Medics**

Klamath River Spike Camp (28017 Hwy 96) - **Mountain Medics**

Priorities for testing will be for those with COVID-related symptoms and those with COVID exposure.

Sanitary and Personal Hygiene Practices

Rigorous sanitary practices are important for reducing the transmission of infectious diseases. All personnel should cover their coughs and sneezes. Perform proper hand hygiene including handwashing or hand sanitizer use after touching potentially contaminated surfaces, removing face coverings, after using the restroom, and before eating or putting anything in their mouth.

Mask Wearing

Mask wearing will be required when Siskiyou County community level is high. The Siskiyou County community level for the week of August 15, 2022 – August 21, 2022 is **Medium**.

Local Government Resources on CFAA

If you are demobing and there is no OES AREP there:

- Have the FSC or IC review and sign your 42s
 - You give the incident the pink copy
 - You keep the gold copy
- You mail the white and green (if it has a green) to OES Headquarters per the instructions on the 42

The Five-D System for Effective Fireline Waterbars

To make effective waterbars, use the 5-D System: **D**istance, **D**iagonal, **D**ivert, **D**ischarge, and **D**issipate.

Distance: Waterbars must be placed the proper distance apart, based on slope. This keeps the area that accumulates runoff small enough to prevent damage. The table below gives the maximum distance between waterbars, or between a waterbar and the next upslope drainage break.

Diagonal: Don't bully the flow, lead it. Waterbars built directly across a fireline tend to fail. Waterbars built diagonal to the fireline lead the water off and work better. A simple rule is to build them at 30 degrees off perpendicular (see the illustration below).

Divert: A good waterbar will divert the water off the fireline. To do this the waterbar must be deep enough to handle all the flow for as long as it's needed. Excavation is much better than fill in making a durable and effective waterbar (a ditch or a dip beats a dike).

Discharge: Another feature of a good waterbar is that it will discharge the flow. A good waterbar is not a dam, it must have an open outlet.

Dissipate: Finally, a good waterbar should dissipate the flow just below the outlet to exhaust its eroding power and cause it to filter into the soil. This may require placing slash, rock, or debris below the outlet.

Fireline slope %	Maximum Distance Apart (feet)	<i>Recommended spacing for waterbars on firelines. Waterbars should be no further apart than this, but they may be closer. When in doubt, put in more. From: UDSA-Forest Service, "Sale Administrator's Handbook"</i>
