FIRE BEHAVIOR

GENERAL:

Heat remains isolated to mainly burning stumps and heavy ground fuel well interior with limited threat to the control lines. Be heads up with forecasted increase in winds this afternoon, low RH's and fuels that are returning to critical dryness.

Fuels: Several years of persistent drought and a water year which has received less than 50% of normal rainfall, has the fire footprint within an area identified as "Extreme Drought." Fuels and fire danger are moving toward critical levels as we remain in what is historically the peak of fire season for northern California.

Energy Release Component (Oak Knoll): is **above the 90th** percentile at 65 (Fuel Model Y 90th percentile is 61)

1HR fuel moisture: 8% (+2) **10HR moisture:** 13%(-5) **100 HR moisture** 11%(-3) **1000 HR:** 9% (same)
Energy Release Component: 65 (+1) **Burning Index:** 42(+1) **Probability of Ignition (PIG)** <92%

Local Watchout Thresholds: 20' winds: 4< mph RH: <40% Temp: 75+ deg 1000hr moisture: <13%

Expected Surface Fire Behavior: (assumes 5 mph eye level wind and 50% slope)

Timber Understory (TU5) Timber with branches, shrubs:

Flame length 9-10' and ROS 14-17 ch/hr head

Grass, Brush (2,SH7)

Flame length 7-17 and ROS 42-66 ch/hr (GS2/SH7)

SPECIFIC:

McKinney Fire: The fire has not experienced perimeter growth for several weeks with the control lines being tested by hot, dry, and windy conditions during that timeframe. Infrared showing the amount of interior heat is diminishing but still present.

Initial Attack: Temperatures have warmed back-up to where any new starts have will likely pose suppression difficulty. Local knowledge is critical to navigate the network of roads to make access to any new fires and links to local pocket cards are provided below. Fuels, Weather and Topography are aligning to support rapid large fire growth on any new starts.

Expected flame lengths and rates of spread could mean direct attack with ground resources will not be effective, don't hesitate to order the resources that can be effective.

AIR OPERATIONS:

Weak mid-slope inversion mixing out by 1300.

Sunrise: 0627 Sunset: 1957

Know your local thresholds, forecasted weather, and see how they relate to local pocket cards.

Hazards & Risks

Hazard Tree Removal: When working in a Hazard Tree area there are increased risk for you, or your vehicle being struck by a falling tree. Select a safe spot to park your vehicle. Some environmental conditions that increase risks of working in these areas are strong or gusty winds, steep slopes, and fire weakened timber. Mitigation measures to discuss with your Modules. Minimize exposure by limiting the amount of time you are in the area or staying out of the area all together. Use heavy equipment when possible. Use lookouts and maintain communications with lookouts. Always have a medical plan in place for the worst-case scenario.

Working around and with Heavy Equipment: Remember the limited visibility of the operator. If you can't see his or her face, chances are they can't see you. When working directly with Heavy Equipment maintain a safe distance and eye contact with the operator. If you are just in the area of Heavy Equipment that is working, just keep eyes on them and maintain a safe distance. Sometimes radio communications can be challenging, with the noise levels in the area so talk with the operator before they start working and have a plan.

Heat Related Illness: Extremely high temperatures are forecast for the fire. Know the signs and symptoms of heat related stress. Staying well hydrated throughout your entire shift is essential. Good nutrition, fitness level and drinking plenty of electrolyte-replacing fluids along with frequent rest breaks will help reduce the chances of becoming sick.

- **Understand that heat stroke is a life-threatening condition!**
- Review the signs & symptoms and patient treatment guidelines found in the IRPG.

Stay Hydrated and take frequent breaks!

COVID-19 PREVENTION INFORMATION

MAINTAINING A HEALTHY WORKFORCE

from the COVID Advisor Team

All fire personnel are susceptible to contracting COVID-19. The health and well-being of all personnel must be a priority throughout the fire season. **Mask use, social distancing, and good hygiene** will support the health of fire personnel and are important ways to **prevent the spread of COVID-19** and **maintain the health of all fire personnel**.

Self-Awareness/ Daily Health Screening

Separate yourself from others and notify your supervisor if you experience COVID-19 related symptoms (fever or chills, cough – more than expected, shortness of breath or difficulty breathing, fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, congestion or runny nose, nausea or vomiting, diarrhea). Supervisors will use COVID precautions and facilitate COVID testing at the identified COVID testing locations.

COVID-19 Testing availability – (2) locations

McKinney Base Camp (430 E. Prather St.) - **Adventure Medics**

Klamath River Spike Camp (28017 Hwy 96) - **Mountain Medics**

Priorities for testing will be for those with COVID-related symptoms and those with COVID exposure.

Sanitary and Personal Hygiene Practices

Rigorous sanitary practices are important for reducing the transmission of infectious diseases. All personnel should cover their coughs and sneezes. Perform proper hand hygiene including handwashing or hand sanitizer use after touching potentially contaminated surfaces, removing face coverings, after using the restroom, and before eating or putting anything in their mouth.

Mask Wearing

Mask wearing will be required when Siskiyou County community level is high. The Siskiyou County community level for the week of August 22, 2022 – August 28, 2022 is **Medium**.

Local Government Resources on CFAA

If you are demobing and there is no OES AREP there:

- Have the FSC or IC review and sign your 42s
 - You give the incident the pink copy
 - You keep the gold copy
- You mail the white and green (if it has a green) to OES Headquarters per the instructions on the 42

The Five-D System for Effective Fireline Waterbars

To make effective waterbars, use the 5-D System: **Distance**, **Diagonal**, **Divert**, **Discharge**, and **Dissipate**.

Distance: Waterbars must be placed the proper distance apart, based on slope. This keeps the area that accumulates runoff small enough to prevent damage. The table below gives the maximum distance between waterbars, or between a waterbar and the next upslope drainage break.

Diagonal: Don't bully the flow, lead it. Waterbars built directly across a fireline tend to fail. Waterbars built diagonal to the fireline lead the water off and work better. A simple rule is to build them at 30 degrees off perpendicular (see the illustration below).

Divert: A good waterbar will divert the water off the fireline. To do this the waterbar must be deep enough to handle all the flow for as long as it's needed. Excavation is much better than fill in making a durable and effective waterbar (a ditch or a dip beats a dike).

Discharge: Another feature of a good waterbar is that it will discharge the flow. A good waterbar is not a dam, it must have an open outlet.

Dissipate: Finally, a good waterbar should dissipate the flow just below the outlet to exhaust its eroding power and cause it to filter into the soil. This may require placing slash, rock, or debris below the outlet.

Fireline slope %	Maximum Distance Apart (feet)	<i>Recommended spacing for waterbars on firelines. Waterbars should be no further apart than this, but they may be closer. When in doubt, put in more. From: UDSA-Forest Service, "Sale Administrator's Handbook"</i>
