

# 2022 SRF Lightning Complex

## Structure Triage Guide

California Interagency Incident Management Team 15 collected, combined, and validated data compiled during this and other local incidents over the last 3 years to create a Structure Triage Guide for the residential communities in the general area of the Humboldt and Trinity County line near Highway 299 and in the New River drainage.

4 printed copies have been created and provided for the Six Rivers NF Lower Trinity Ranger District (2), the Shasta Trinity NF Trinity River Management Unit, and for the Hawkins Bar Volunteer Fire Department.

CAIIMT 15 GIS personnel created an ArcGIS WebMap, available using the QR below and on the printed document. Currently a NIFC ArcGIS Online account is required to view the WebMap. Forest GIS staff have the ability to edit access permissions.

Operations staff created 2 separate digital products, with each product having a large and reduced file size option. Reduced file sizes are best for field downloading. To save printing costs, the print versions have 2 individual properties on one page. The files that do not have "Print" in their filename are 1 property per page and easier to view without zooming. All 4 products are available on the incident ftp site, in the GIS/QR/Structure\_Triage\_Guide folder. It is also available through the QR below and on the printed document. The digital products are password protected, with the password embedded in the filename. All files share the password "Trinity22".
