High pressure will begin to build back in again on Wednesday which will transition the pattern into a warming and further drying trend. Still expecting overnight easterly winds with onshore flow in the afternoons.

WEATHER FORECAST FOR TUESDAY:

WEATHER: Smoke in the morning, clearing Branch I by midday as west winds develop.

RIDGETOP - Northeast 2-5 mph in the morning becoming West and Northwest 5-10 mph gusts to 15 mph during the afternoon hours.

INVERSIONS/STABILITY: Weak to moderate morning inversion around 3000 feet eroding by 1200-1300 hours.

WEATHER FORECAST FOR TUESDAY NIGHT:

WEATHER: Smoke and haze through sunset then smoke settling across the fire overnight and ICP toward morning.

MINIMUM TEMPERATURES: 58-64 thermal belts above 2000 ft. 52-56 lower slopes. **24 HR Trend:** down 3-5 degrees.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Fire behavior will be influenced by the inversion and the shading. Expect low to moderate fire behavior under the inversion. Once the inversion lifts fire behavior will increase with the addition of the solar radiation and pre-heating of the fuels. Moderate to active fire behavior above the inversion. Nighttime marine influence will limit fire behavior in lower slope positions, with dry air above the inversion/marine influence producing potential for moderate overnight fire behavior in upper slopes. These concerns are strongest in Branch III.

The fires are burning in areas with no recent fire history and significant dead and down, resulting in abundant surface fuels. The fires are situated near the confluence of the main stem Trinity River and the S. Fork of the Trinity River, which will influence wind channeling and subsequently fire behavior – watch for erratic and eddying winds near the confluence and large bends in the river canyons.

Ignition Receptiveness: Probability of Ignition 34% shaded 64% sunshine Night 16% Spotting ¼ - ½ mile
Dryness: Dead and down fuel moistures : 1 hour – 6-9%, 10 hour– 12%, and 1000 hour– 11%.

SPECIFIC:

Branch I - Divisions K, L and M.

Interior fine fuels will continue to burn. In Division M and K control lines have sufficient depth to make interior activity unlikely to compromise control lines. In Div. L, fire will continue to move upslope towards Lone Pine Ridge. Spotting can be expected on top of the lone Pine Ridge. The head will keep moving southeast into Prairie Creek.

Branch III – Divisions U, W

Fire in Div. W and U will continue to consume fuel between current perimeter and planned control lines. If portions are above the inversion or if the inversion weakens, increases in activity are possible and could challenge control lines. The high portions of these divisions are most likely to be impacted by NW winds and the dry air above the nighttime inversion. Afternoon winds from the NW will be favorable for the west side.

Night: Early on in the shift expect to see active fire behavior especially in the interior and in Division L area. Watch for any spotting that may have occurred throughout the day but went unnoticed in the Horse Range drainage. Activity should moderate around 2200 hours.

AIR OPERATIONS:

The inversion will limit air morning operations, during the afternoon hours air operations should not be limited.

SAFETY

Take weather observations frequently. Base all actions on current and expected fire behavior. Reexamine your plan and risk analysis as fire behavior increases. Post more lookouts, if more warning time is needed.

HEALTH AND SAFETY MESSAGE

SAFETY starts with **YOU**

We are ALL accountable for SAFE behaviors

For Day/Night Operations: August 23-24, 2022

INCIDENT: SRF Lightning Complex

Day: Tuesday/Wednesday Shift: Day/Night

Major Hazard and Risk:

- **Hazard Tree Safety:** Hazard trees, both dead snags and live green trees, are one of the most common risks encountered on the fireline. All firefighters should frequently survey their work area for potential hazards trees. **This includes your sleeping areas in camp! IRPG pg. 20**
- **Extended Extraction Times:** Be familiar with the medical plan. Develop a plan on how you would get an injured firefighter out timely. Factor in how smoke inversions will reduce the likelihood of utilizing helicopters for a medevac.
- **Hazardous Roads:** Narrow roads, steep drop offs, erratic drivers, and operator fatigue are all prevalent on this and other assignments. Watch out!
- **Heat Related Injuries:** Stay hydrated, eat properly, drink fluids in a 3:1 ratio of water to sports drink, take frequent breaks, and pay attention to your body.

Fatigue & Over Exertion

Drink 1 quart of water each hour during and after work. Set a reasonable work pace and allow adequate rest breaks while on the project. Stagger work crews to limit fatigue. Use buddy system to monitor personnel of heat related and fatigue issues. Follow work/rest guidelines.

Utilize Situation Awareness.

**Look Up, Look Down,
Look Around.**

- ***Fuel Characteristics** – Assess prior to beginning operations.
- ***Fuel Moisture** – Read daily shift plan and assess on site.
- ***Terrain & Fuel Accumulations** – Scout and assess
- ***Wind** – Measure, observe, feel and notice changes.
- ***Atmospheric Stability** – Observe.
- ***Fire Behavior** – Monitor constantly prior to and during operations.
- ***Safety** – Ask questions in unfamiliar situations. Use the buddy system and watch for signs and symptoms of HRT's.

Nerds in hell

Thanks, from your Safety Team!!

Use the Risk Management Process in all your
decision making..... IRPG page 1

BR/DIV	HAZARDOUS ACTIONS/CONDITIONS	MITIGATIONS/WARNINGS/REMEDIES
All	Hazard Trees	<ul style="list-style-type: none"> Follow "Hazard Tree Safety" guidelines, IRPG pages 22-23. Post lookouts, or use a spotter in mop-up areas with personnel. Don't park vehicles or take breaks in high concentrations of hazard trees. Establish trigger points for disengagement during high wind events. Remember that the hazard zone extends a minimum of 2 1/2 tree heights. Post road guards when appropriate.
All	Steep Terrain & Rolling Debris	<ul style="list-style-type: none"> Maintain 8-10' spacing when working and walking. Don't work above any personnel. Be on the lookout for rolling rocks, debris, or burning material. Evaluate necessity to send personnel in areas with limited access.
All	Extended Medical Extraction Times	<ul style="list-style-type: none"> Identify helispots and communicate Lats/Longs to DIVS. Be familiar with the Medical Plan and communicate 8 line promptly. Evaluate the necessity to send personnel into areas with limited access. Be aware of weather conditions (i.e. smoke inversions, high winds etc.), that could affect the ability of helicopters to reach you. Don't rely on helicopters exclusively.
Branch 1	Firing Operations	<ul style="list-style-type: none"> Follow the chain of command when undertaking burning operations. Ensure that aerial/ground ignition plans have been well briefed including LCES and drought related fire behavior considerations. Initiate burning after ensuring the plan is authorized and understood by all. Ensure all personnel are aware of firing operation that may affect them.
All	Driving & Traffic	<ul style="list-style-type: none"> Practice "Defensive Driving" techniques traveling on roads and city streets. Use spotters and honk horn when backing. Follow Driving LCES (Lights, Chock blocks, Emergency brake, Seatbelts). Always use headlights and obey posted speed limits. Use chock blocks, turn wheels into hill. Avoid distractions (eating, & cell phones etc.) and use the 3 second rule.
All	Air Operations	<ul style="list-style-type: none"> Ensure positive communication with all air resources. Don't plan on air resources for medical transport or resupply. Follow "Aviation Watch-Out Situations" IRPG Pg. 46. Refer to "Directing Bucket or Retardant Drops" IRPG Pg. 58.
Branch 1 Branch 3	Heavy Equipment Operations	<ul style="list-style-type: none"> Ensure communications are established with operators. Use hand signals if other communications are unavailable. Maintain a 50' -100' exclusion area around equipment and increase it to 2 1/2 times tree height when in timber. Use a spotter when backing. Avoid working below heavy equipment.
All	Unplanned Public Interaction	<ul style="list-style-type: none"> Be alert to non-fire personnel in areas with suppression personnel. All non-fire personnel will be escorted while on fireline. Post lookouts to in areas with public to avoid conflicts with mission tasks. Ensure sufficient security to restrict access to exclusion area.
All	Infectious Disease Control	<ul style="list-style-type: none"> Disinfect vehicle interiors, and commonly touched surfaces frequently. Do not share devices (i.e. cellphones, laptops, radios etc.). Utilize technology to communicate while maintaining social distance. Wash your hands frequently.

SRF Lightning Complex Incident: Resource Advisor Message

Fish Screens: Coho Salmon Critical Habitat

The Trinity River and tributaries are considered critical habitat for threatened Coho salmon, an anadromous fish (fish born in freshwater who spend most of their lives in saltwater and return to freshwater to spawn). Please ensure that any Mark 3 and Engine/Tender suction hoses have a fish screen attached when drafting. Fish screens are designed to minimize stress, injury or even death during the drawing and application process. Talk to a READ if you need a screen.

Port Orford Cedar Root Disease: NO DRAFTING East Fork and Boise Creek CGs!!!

Some local drainages are infected with POC Root disease, which is a root rotting disease that spreads via water and mud. Infested waters within the fire perimeter include: the main stem of Willow Creek and small creeks to the north up to Hoopa, south side of Willow Creek (includes area in **Boise Creek Campground**) in East Fork of Willow Creek (includes area in **East Fork Campground**) and in most of the tributaries. **DO NOT DRAFT from East Fork Campground OR Boise Creek Campground.**

IMPORTANT: Yellow/Black Striped flagging indicates resource AVOIDANCE areas.

- **Invasive Plant Species – PLEASE USE WEED WASH**

The area in and around the Lightning Complex, are home to many sensitive species. Infestations of highly invasive plant species, like yellow star thistle, are one of the largest threats to sensitive species populations here. Spread via vehicles and foot traffic as well as re-activation via fire is of high concern. To help protect these sensitive places, do not park in and try to avoid flagged areas. **Make sure to visit the WEED WASH at Check-In to the incident and demob.** Located on Hwy 96 just past the Ranger Station.

- **Cultural Resources:**

There is a potential that undocumented cultural resources will be encountered while fighting fire. It is important when a potential cultural resource is encountered that they are not disturbed in any manner.

GPS its location and take a photo, but do not remove or collect anything. Findings of cultural resources should not be reported over the radio. Work with your division to notify a resource advisor for recommendations on how to proceed.
