## INPUTS

**WEATHER SUMMARY: \*\* See attached Weather Forecast for details/discussion \*\***

	08/27/2022 Day	08/27/2022 Night
<b>Sky Weather</b>	Dissipating smoke and haze in the morning.	Haze through sunset then smoke settling across the fire overnight and ICP toward morning.
<b>Temp</b>	75- 80F ridges, 82-88F drainages	55-62F above 3500ft, 53-60F below
<b>RH %</b>	35-46% ridges; 30-35% drainages	75%-85% above 2000 ft, 80%-90% below
<b>20 ft. Winds</b>	<b>SLOPE/VALLEY</b> West to northwest 3-5 mph increasing to 5-7 mph with gusts to 12 mph in the afternoon. <b>RIDGETOP</b> West 7-10 mph with gusts to 17 mph in the afternoon. Localized gusts to 20 mph possible along highest ridges, peaks, and exposed slopes.	<b>SLOPE/VALLEY</b> West winds 7-10 mph along the ridges, weakening after 2200. <b>RIDGETOP</b> Northwest 5-10 mph with gusts up to 15 mph through 0200, easing to 3-6 mph late.
<b>Stability</b>	Weak to moderate morning inversion around 3000 feet eroding by 1200-1300 hours.	Smoke settling over the fire and ICP with a moderate nighttime inversion around 3000 ft.

## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL:

Slightly higher humidity will still support active fire behavior once the inversion breaks. Expect low to moderate fire behavior under the inversion. Once the inversion lifts fire behavior will increase to moderate - active. Nighttime recovery will keep fire behavior low. The fires are burning in areas with no recent fire history and significant dead and down, resulting in abundant surface fuels. The fires are situated near the confluence of the main stem Trinity River and the S. Fork of the Trinity River, which will influence wind channeling and subsequently fire behavior – watch for erratic and eddy winds near the confluence and large bends in the river canyons.

**Ignition Receptiveness:** Probability of Ignition 34% shaded 57% sunshine Night 9% Spotting ¼ - ½ mile

**Dryness:** Dead and down fuel moistures :1 hour – 6-9%, 10 hour– 11%, and 1000 hour– 12%.

#### SPECIFIC:

##### Branch I - Divisions G, N and R.

Interior fine fuels will continue to burn. In Division R, G and D control lines have sufficient depth to make interior activity unlikely to compromise control lines. In Div. N, fire will continue to move upslope towards Lone Pine Ridge. Spotting can be expected on top of the lone Pine Ridge. The head will keep moving southeast into Groves Prairie.

##### Branch X – Divisions U, W

Fire in Div. W and U No perimeter growth is expected. Spotting outside of the line continues to be viable but to a lesser extent with the predicated probability of ignition.

**Night:** Early on in the shift expect to see active fire behavior especially in the interior and in Division N area. Watch for any spotting that may have occurred throughout the day but went unnoticed in the Horse Range drainage. Activity should moderate around 2400 hours.

#### AIR OPERATIONS:

The inversion will limit air morning operations, during the afternoon hours air operations should not be limited.

## SAFETY

*Risk Analysis Initiate all actions based on current and expected fire behavior*

- *Can the resources you are replacing give you a thorough briefing?*
- *Can you observe the area, use scouts?*
- *Have escape routes and safety zones been thoroughly scouted?*
- *Are they marked for night use?*
- *Have potential dangers been located, can they be dealt with?*
- *Access to weather and fire behavior forecast?*

We are **ALL** accountable for **SAFE** behaviors  
For Day/Night Operations: August 27-28, 2022

INCIDENT: SRF Lightning Complex

Day: Saturday/Sunday Shift: Day/Night

**Major Hazard and Risk:**

- **Hazardous Roads:** Narrow roads, steep drop offs, erratic drivers, and operator fatigue are all prevalent on this and other assignments. Watch out!
- **Heat Related Injuries:** Stay hydrated, eat properly, drink fluids in a 3:1 ratio of water to sports drinks, take frequent breaks, and pay attention to your body.
- **Extended Extraction Times:** Be familiar with the medical plan. Develop a plan on how you would get an injured firefighter out timely. Factor in how smoke inversions will reduce the likelihood of utilizing helicopters for a medevac.
- **Hazard Tree Safety:** Hazard trees, both dead snags and live green trees, are one of the most common risks encountered on the fireline. All firefighters should frequently survey their work area for potential hazards trees. **This includes your sleeping areas in camp!**

**Standard Firefighting Order #8:** Give clear instructions and be sure they are understood

**Watch Out Situation #12:** Cannot see main fire; not in contact with someone who can

**Four Critical Errors that are made while driving:**

1. Texting while you drive or looking at the scenery.
2. Talking on the phone or radio while driving.
3. Veering out of your lane of travel.
4. Driving too fast for the road conditions

**Driving to your daily assignment is probably the most dangerous thing you will do today. Take it seriously.**

**Thanks, from your Safety Team!!**

## Thought for the Day

### FIRE

Fatigue..... Be aware of fatigue having a negative impact on your conduct and speech

Integrity..... Integrity and Honesty are vital on a fire. If you mess up, fess up, whatever you did can most likely be fixed if you report it as soon as you are aware of it.

Respect..... Treat others as you would like to be treated

Example..... Set an example. Realize you influence others around you, therefore, always conduct yourself in a professional and competent manner, while enjoying your work!

## SRF Lightning Complex Incident: Resource Advisor Message

### Fish Screens: Coho Salmon Critical Habitat

The Trinity River and tributaries are considered critical habitat for threatened Coho salmon, an anadromous fish (fish born in freshwater who spend most of their lives in saltwater and return to freshwater to spawn). Please ensure that any Mark 3 and Engine/Tender suction hoses have a fish screen attached when drafting. Fish screens are designed to minimize stress, injury or even death during the drawing and application process. Talk to a READ if you need a screen.

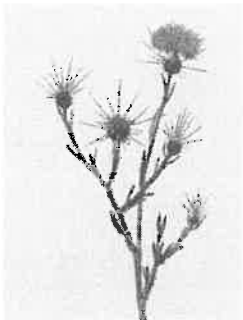

### Port Orford Cedar Root Disease: NO DRAFTING East Fork and Boise Creek CGs!!!

Some local drainages are infected with POC Root disease, which is a root rotting disease that spreads via water and mud. Infested waters within the fire perimeter include: the main stem of Willow Creek and small creeks to the north up to Hoopa, south side of Willow Creek (includes area in **Boise Creek Campground**) in East Fork of Willow Creek (includes area in **East Fork Campground**) and in most of the tributaries. **DO NOT DRAFT from East Fork Campground OR Boise Creek Campground.**

### **IMPORTANT: Yellow/Black Striped flagging** indicates resource **AVOIDANCE** areas.

- **Invasive Plant Species – PLEASE USE WEED WASH**

The area in and around the Lightning Complex, are home to many sensitive species. Infestations of highly invasive plant species, like yellow star thistle, are one of the largest threats to sensitive species populations here. Spread via vehicles and foot traffic as well as re-activation via fire is of high concern. To help protect these sensitive places, do not park in and try to avoid flagged areas. **Make sure to visit the WEED WASH at check-in to the incident and demob, located at ground support.**

### **Cultural Resources:**

There is a potential that undocumented cultural resources will be encountered while fighting fire. It is important when a potential cultural resource is encountered that they are not disturbed in any manner. GPS its location and take a photo, but do not remove or collect anything. Findings of cultural resources should not be reported over the radio. Work with your division to notify a resource advisor for recommendations on how to proceed.
