2022 SRF Lightning Complex Fire Weather Forecast

FORECAST NO: 27

PREDICTION FOR: 0700 Sun - 0700 Mon

SHIFT DATE: Sept 4th - Sept 5th, 2022

NAME OF FIRE: 2022 SRF Lightning Complex

SHIFT UNIT: CA-SRF

SIGNED: Tom Lonka - IMET (910) 920-7865

FORECAST ISSUED: 1800 Saturday, September 3rd, 2022

WEATHER DISCUSSION: Weak Pacific air mass will remain in control through Monday, though a warming trend will be noted. Highs will reach well into the 80s, though areas of moderate smoke will limit some of the warming in places. Relative humidities will range from the low 20s in the lower slopes and elevations to upper 20s% in the higher reaches. Good overnight relative humidities are expected with values around 80% or higher in the lower drainages and valleys, and around 60% in the higher terrain. Will see a pattern begin early in the week, with Tuesday being the hottest day of the week with record high temperatures possible, along with afternoon humidities in the teens.

WEATHER FORECAST FOR TODAY (SUNDAY):

WEATHER: Sunny, but areas of smoke. Moderate smoke below 4000 ft, mainly on north and west side of the fire.

MAX TEMPERATURES: 81-87 degrees upper slopes and ridges.

24 HR Trend: minimal change. 24 HR Trend: minimal change.

87-92 degrees lower slopes and drainages.

MINIMUM HUMIDITY: 23 - 28% upper slopes and ridges.

20 - 25% lower slopes and drainages. 24 HR Trend minimal change.

24 HR Trend minimal change.

20-FOOT WIND:

SLOPE/VALLEY - Light east or downslope breeze early, becoming west or upslope 5-7 mph with gusts to 13 mph around 1400 PDT.

RIDGETOP- Light southeast wind early, becoming west to northwest 3-5 mph around 1200 PDT, increasing to 5-7 mph with gusts to 15 mph around 1400 PDT.

INVERSIONS/STABILITY: Moderate inversion around 2000 feet eroding around 1400 hours.

SMOKE TRANSPORT WIND: Southwest around 7 mph.

WEATHER FORECAST FOR TONIGHT (SUNDAY NIGHT):

WEATHER: Haze through sunset then smoke settling across the fire overnight and ICP toward morning.

MINIMUM TEMPERATURES: 59-64 thermal belts above 3500 ft. 55-60 lower slopes. 24 HR Trend: minimal change.

MAXIMUM HUMIDITY: 48-58% mid and upper slopes. 70-80% lower slopes and along the river. 24 HR Trend: down 2-5%.

20-FOOT WIND:

SLOPE/VALLEY - West or upslope winds 7-10 mph along the slopes, diminishing to downslope 2-5 mph after 2100.

RIDGETOP - Northwest 5-10 mph with gusts up to 15 mph through 2300, diminishing to east 3-6 mph late.

INVERSIONS/STABILITY: Smoke settling over the fire and ICP with a moderate nighttime inversion around 2000 ft.

EXTENDED FORECAST MONDAY - WEDNESDAY: Minimal change through Monday with high pressure remaining nearly stationary. Overnight humidity recoveries remain favorable through Tuesday, though rapid warning and drying conditions through the day. There is a pattern shift on Tuesday where record highs will be possible, along with very dry RH values in the teens. Winds will become more steadily west and will increase along ridgetops. May see gusts around 20 mph or higher.

PORTABLE WEATHER STATIONS:

Division N/R near Denny Road: Frequency 163.350 DTMF Tone 0059 Division W near Friday Ridge: Frequency 163.350 DTMF Tone 0060 Division N/R/U east of Elbow Dip: Frequency 163.350 DTMF Tone 0002

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 29	TYPE OF FIRE: Wildfire
FIRE NAME: SRF Lightning CA-SRF-00620	OPERATIONAL PERIOD: 09/04/2022 (0700-0700)
DATE ISSUED: 09/03/2022	TIME ISSUED: 1800
UNIT: Six Rivers National Forest	SIGNED: Typed/printed: Nic Elmquist (FBAN)

INPUTS

WEATHER SUMMARY:

** See Fire Weather Forecast**

Weather: A weak Pacific air mass will remain in control through Monday, although a warming trend will be noted.

Max Temp: 810-870 (upper elevations), 870-920 (lower slopes) Min Temp: 590-640

Min RH: 23%-28% (upper elevations), 20%-25% (lower slopes)

20 foot winds: Light southeast wind early, becoming west to northwest and increasing to 5-7 mph with gust to 15 mph

around 1400

FUELS SUMMARY:

Fuels and Fire Behavior Advisory Issued for Geographic Area

The Campbell and Ammon fires resulted from a lightning event that occurred in the early morning hours of August 5th. Although the area has seen 50-75% of normal precipitation in the current rain year, the relatively mild spring and early summer conditions had the fuel and fire danger indices near historical averages during the initial stages of the fires. Current conditions are reflective of an additional month of drying with all fuels and fire danger indices above the 90th percentile. The primary carrier of fire at lower elevations is timber litter with a substantial hardwood dead and down component resulting from an ice/snow event this past winter.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Fire activity will be concentrated to the unburned islands within the perimeter of the control lines. A large portion of the Campbell and Ammon fires appeared to have burned with a low to moderate severity. The lower severity means there will continue to be potential for interior timber stringers and unburned eyebrows of vegetation to burn as temperatures increase through next week. Less smoke and an increase in fire danger will cause an uptick in activity over this period. Evaluate new signs of heat sources and request aircraft early if needed.

Fire Danger Indices - 2022 IRPG Page 39

Energy Release Component (Brush Mtn): 97th September Average ERC Percentile: 50th

Peak Burn Period (1600-2000) - Probability of Ignition (PIG): 60% (shaded), 80% (unshaded), 10% (overnight)
Spotting Distance of Torching Tree with 20 mph ridgetop winds: 0.3 miles

SPECIFIC:

Branch I: Expect the winds to shift to a westerly direction and increase along ridgetops each afternoon. Continue to monitor the unburned islands in Div. J near DP 150 and DP 160 and look for opportunities to mitigate any potential issues ahead of the predicted warmer, dryer, breezier conditions early next week.

Branch X: There will continue to be burning of interior islands of vegetation with minimal threats to the control lines for the foreseeable future. Post lookouts who can evaluate potential and act accordingly.

AIR OPERATIONS:

Sunrise 0646, Sunset 1943 (Daylength: losing 2 min, 36 sec)

Smoke will impact the lower elevations early in the day. However, conditions will be conducive for air operations in the afternoon.

SAFETY:

Avoid hiking and working above others on steep slopes. Call out rolling material when needed.

Fuels and Fire Behavior Advisory

Northern California September 2nd, 2022

Subject: Potential for extreme fire behavior due to critically elevated fire danger indices, low live and dead fuel moistures, and very hot and dry conditions across much of northern California.

Discussion: An extended period of hot, dry weather with embedded periods of enhanced winds will impact Northern California. The elevated fire weather concerns with fuels reaching their yearly minimum moisture values will create conditions conducive to long range spotting, rapid fire growth, and high resistance to control.

Difference from normal conditions: The current values for Energy Release Component (ERC) are at or above the 90th percentile for the majority of Northern California, with live fuel moistures dropping to critical levels as herbaceous and woody fuels cure. These conditions will be exacerbated by a predicted heat wave, resulting in anomalous daytime highs with little relief in temperature or humidity recovery overnight. Some PSA's, may reach daily record ERC values, with all covered PSA's predicted to reach or exceed the 97th percentile for an extended period. The combination of extreme ERC's with high temperatures and poor overnight humidity recovery is highly correlated with extreme fire behavior in Northern California.

Concerns to Firefighters and the Public:

- The advisory coincides with the Labor Day holiday weekend that is likely to result in increased outdoor recreation and visitor use to public lands across Northern California. The increase in public use carries an increased risk of fire starts as well as potential for evacuations of visitors/ recreational users in the event of a fire starting.
- Energy Release Component (ERC) in areas covered by this advisory are at or above the 90th percentile and are expected to approach or exceed the 97th percentile. Anticipate increased spread rates, long range spotting, and active nighttime burning.
- The combination of persistent drought, a building heat wave, and a very dry atmosphere will continue to decrease already low fuel moisture values:
 - o 1000-hour fuel moistures are below average and approaching the 90th percentile,
 - Live woody fuel moisture in brush is near or slightly below average, making them readily available and will likely reach critical levels because of the forecasted hot, dry weather.
 - The above average herbaceous fuel load at low and mid elevations (below 5,000 ft.) is fully cured, with high elevation herbaceous fuels rapidly curing during the hot, dry forecast.
 - Higher than average surface fuel loading is present in areas that experienced winter snow and ice storms in the Coast Range and northern Sierra Nevada.

Expect fires to ignite easier and spread faster. Do not expect fires to exhibit reduced fire behavior when entering areas of live fuels; anticipate increased spread rates and spotting.

- Periods of enhanced winds are expected during the hot and dry period. Given the current and anticipated fuels conditions, increases in winds will make direct attack of any new starts difficult and may hamper use of aerial resources.
- Review the current <u>North Ops Outlooks</u> and <u>national fuels and fire behavior advisories</u>.

Mitigation Measures:

- Suppression actions need to be based on good anchor points, escape routes, and safety zones.
 Remember LCES. Experienced lookouts are essential under these conditions.
- Base all actions on current and expected behavior of the fire. Augment initial attack resources as incident activity dictates
- Fire managers should be aware of high use recreation and visitor sites in their area. The holiday weekend will bring increased visitor use, increasing risk of starts during critical fire weather.

Area of Concern: Northern California except for the following Predictive Service Areas: North Coast, Bay Marine, and west of Highway 101 in Mid-Coast to Mendocino.

5

HEALTH AND SAFETY MESSAGE

For Day/Night Operations: September 4, 2022

INCIDENT: SRF Lightning Complex

Day: Sunday/Monday Shift: Day/Night

Major Hazard and Risk:

> Hazard Tree Safety: Hazard trees, both dead snags and live green trees, are one of the most common risks encountered on the fireline. All firefighters should frequently survey their work area for potential hazards trees. This includes your sleeping areas in camp!

Extended Extraction Times: Be familiar with the medical plan. Develop a plan on how you would get an injured firefighter out timely. Factor in how smoke inversions will reduce the likelihood of utilizing

helicopters for a medevac.

> Hazardous Roads: Narrow roads, steep drop offs, erratic drivers, and operator fatigue are all prevalent on this and other assignments. If road condition is an issue, contact your Division Supervisor to report.

Heat Related Injuries: Stay hydrated, eat properly, drink fluids in a 3:1 ratio of water to sports drink, take frequent breaks, and pay attention to your body. This applies to personnel working in ICP/camp as well.

<u>Narrative:</u> Yesterday and today we have used some safety messaging about <u>fatigue</u> and <u>complacency</u>. Read about more <u>fatigue</u> and its effects below. Watch out for your crew... are they making good decisions, are they acting normal, are they not firing on all cylinders? Read on!

More Fatigue and its Effects

#4 – Fatigue increases the tendency to use heuristics when making risk-based decisions

Heuristics are simple, efficient rules which people often use to form judgments and to make decisions. These are mental shortcuts, rules of thumb that usually involve focusing on one aspect of a complex problem and ignoring others.

The good thing is that they are quick and, most of the time, sufficiently correct. However, when they are used for a situation that demands an effortful and analytical approach, they may lead to cognitive biases in judgments.

These biases may contribute, in various ways, to suboptimal decision making.

#5 – Fatigue makes it difficult to store new information and consolidate memories

Do you also experience problems remembering information, or what you did today after a couple of shifts on the fireline? This is very common. The reason for this is that your ability to store new information into the brain is hindered by **fatigue**.

As discussed before, this is likely to be caused by various consequences of fatigue, such as reduced focus, motivation, attention, and concentration caused by fatigue and increased sleep pressure.

Firstly, this prevents new information to be stored in memory. Secondly, the lack of sleep prevents socalled memory consolidation (i.e. the strengthening of existing neural connections), which happens during sleep. Fatigue is real. Learn to manage it. Rest Up, Sleep well...

TRAINING SPECIALIST MESSAGE

- -A Training Specialist is assigned to the incident.
- -It is to your advantage to complete the quick registration process sooner than later.
- -The TNSP Desk located at ICP. You can also contact the TNSP, Jesse Roach, at 530-966-3459 tor training related questions.

FINANCE MESSAGE

Email address: 2022.lightningcomplex.finance@firenet.gov

INTERIM PAYMENTS

Any contract equipment that has been here at least 14 days and is not on the demob list must receive an interim payment. Please see the Equipment folks in the Finance yurt or send an email to the address above to begin that process.

TIME

Electronic CTRs, Shift Tickets and agreement information can be emailed to the address above. Hard copy documents can also be dropped off in the Finance yurt. Please be sure to write legibly and print your name under your signature.

COSTS

Send any costs for aircraft or national contracts (caterers, showers) to the email address above.

FIRE ITEMS REPLACEMENT

<u>Cache Items</u> – Complete a 213 signed by DIVS verifying lost or damaged items and explanation of circumstances and take to Ordering. Any items that cannot be filled by Supply will need FSC, INBA or IC signature to approve replacement for cache equivalent of lost/damaged items.

<u>Non-cache items/Claims</u> - For replacement of non-cache items or claims please submit a completed OF-213 and OF-289. A determination for replacement based on the documentation provided will be made by the FSC, IC, or INBA.

-Damaged items will be surrendered to the Supply Unit. Replacement for normal wear and tear is through home unit project funds.

We would appreciate photos from the field: fire activity, people at work, etc. Please EMAIL these photos and include the location, date taken, involved crew, and photo credit. If the photo has people working, please make sure they are in full PPE.

Online Information For The Public

STAGE 1 Fire Suppression Repair **Cheat Sheet**

Remember, if you have any doubts or questions about the ideal end state of these repairs, get in touch with a READ!

Overall Objective: Repair damage caused by suppression activities, and thus minimize short and long-term environmental impacts. Impacts caused by the direct effects of fire will be mitigated or corrected during this repair phase, only those impacts caused by the suppression of the fire.

General Guidelines for Stage 1 Repair (consult signed Suppression Repair Plan (SR Plan)) Dozer and Hand Lines:

- Construct water bars and/or rolling dips where access is no longer needed and erosion is a concern. Knock down berms into the fire line. (see SR Plan page 13)
- Firelines that cross draws/channels will be cleaned of debris and re-contoured (see SR Plan page 15)
- Remove suppression created fuels and logs from firelines via chipping, piling, lop & scatter, and decking, advised.
- Trench handlines should be pulled back and contoured.
- Obliterate hand lines where they intersect FS trails.
- Strategic firelines intended for future use should have suppression general debris chipped and little to no debris or brush scattered over them. Only pile after all other repair activities are complete.

Safety Zones, Drop Points, Helispots, Sling Sites, Staging Areas, etc:

- Restore to pre-existing condition.
- Knock down berms, de-compact soil, and restore natural drainage flows.
- Only pull enough slash across the area to reduce erosion and prevent further impacts.
- Chip and pile debris, as advised.

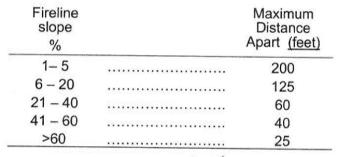

Roads and Trails:

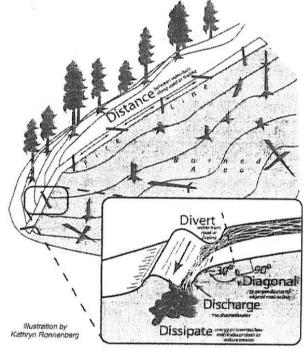

- Clean ditches, side drains, rolling dips, and other drainage features along roads damaged by suppression activities (see SR Plan page 14).
- Where needed, water and grade surfaces and remove berms along roads impacted by suppression activities.
- Chip side-cast slash on roads, construct slash piles, lop and scatter, or deck logs, as advised.
- Repair damaged earthen barriers for Maintenance Level 1, decommissioned, and non-system roads (see SR Plan page 16).

Miscellaneous Resources:

- Maintain the integrity of Wilderness, Inventoried Roadless Areas and Wild and Scenic River Corridor characteristics
- SITES WITH YELLOW/BLACK FLAGGING: Sites: No repair work may commence without consultation with an assigned Archaeologist and the Hoopa Tribal Representative, and/or and the lead Resource Advisor to the fire.
- Remove all equipment, gear, hose, flagging, and trash from firelines and dispersal sites following repair actions. Fences and Gates:

- Repair any fences and gates damaged by suppression activities. Water Sources:
 - Remove dams, dikes, and other impoundments.
 - Restore damaged stream banks to natural contours.
 - Report fuel and oil spills.

For repairs along 06N06 & 06N08 - See READ for specific vehicle washing procedures!

Fire and COVID-19 Briefing Checklist SRF LIGHTNING COMPLEX

Self-Awareness / Screening

- Notify supervisor if you or others experience:
 - Cough, more than expected
 - Difficulty breathing
 - Loss of taste or smell
 - Fever
 - Chills
 - Sore throat
 - Muscle pain
- Immediately separate yourself from others.
- Follow crew and division plans to isolate, triage, and transport symptomatic personnel.

Hygiene on the Fireline

- Properly wash or sanitize your hands often
- · Avoid handshakes and communal use items
- Inform supervisor of needed resupply.
- Disinfect high touch surfaces often

Social distancing and protective equipment

- Practice social distancing
- Conduct briefings in conversations outdoors and at least <u>SIX</u> feet apart
- Utilize face coverings
- Clean or replace dirty face coverings, equipment, and PPE

Communications

- Ensure effective sender/receiver messaging.
- · Protect yourself, your crew, and your camp!

Any questions contact:

MEDL Jim Emerson 805-570-9061

Suicide Prevention Awareness Month

September is National Suicide Prevention Awareness Month. Suicide awareness is on the rise among wildland firefighters. The intense physical and psychological demands combined with the stressors inherent to this occupation can result in psychological issues.

There used to be a stigma attached to asking for help, but first responders now acknowledge that mental health is just as important as physical well-being. It is not an admission of weakness to ask for help. You are not alone!

If you or someone you love is experiencing suicidal thoughts, reach out for help by calling the Suicide Prevention Lifeline at 1-800-273-8255 for talk or https://suicidepreventionlifeline.org/ for chat.

If you're experiencing a crisis, you can also use the Crisis Text Line by texting HOME to 741741.
