# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 33	TYPE OF FIRE: Wildland
FIRE NAME: Mosquito CA-TNF-001371	OPERATIONAL PERIOD: 10/28/2022 – 10/31/2022
DATE ISSUED: 10/27/2022	TIME ISSUED: 15:00 Hrs.
UNIT: Tahoe and El Dorado NF.	SIGNED:  Kevin Osborne (LTAN) 530-782-2712

## INPUTS

**WEATHER SUMMARY:** Seasonably warm and dry days with temperatures in the 60s and cool to chilly nights will continue as the main weather feature over coming days, persisting through Halloween on Monday, October 31st. Daytime winds will be generally light, with terrain-driven diurnal patterns determining direction and speed based on slope steepens, slope position, and aspect. Overnight, NE to E downslope winds remain likely, which will limit humidity recoveries to only moderate values near 40%, or possibly lower in the most impacted areas. A significant pattern change predicted for Tuesday November 1<sup>st</sup> is expected to bring cold, wet weather.

**\*\*See daily Weather Forecasts for details \*\***

## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL:

Fire behavior concerns remain low, though not insignificant, until precipitation arrives early in November. ERC values are no longer dropping as the dry weather pattern has developed. Values will rise over the next 2-3 days, but remain well below critical thresholds, though still above average for the time of year. Both dead and live fuels are relatively available, but the lack of residual heat makes significant fire spread unlikely.

If resources support an emerging IA or respond to areas of interior heat, flame lengths are expected to be low and conducive to direct attack and rates of spread are also expected to be low. Recent success in IA across the North Ops GACC supports this, with direct initial attack actions being very successful. Areas of the fire with good overnight recovery will require significant sunlight and time to dry out before remaining smokes or residual heat become visible. Patrols should focus on the afternoon when these conditions make detecting residual hot spots most likely.

The dry weather will allow continued smoke production from any areas of remaining heat. Such smoke may be visible to the public and calls for service are likely to continue until significant precipitation arrives next week.

**Consider reviewing pocket cards for local knowledge on fire environment triggers and thresholds:**

El Dorado NF ERC Y Pocket Card:  
NOTE - wind is NOT part of ERC

Tahoe NF West Side BI Y Pocket Card:  
NOTE -wind IS a part of BI

#### SPECIFIC:

**Branch 10 (North):** No control issues expected as fire has reached 100% containment.

**Branch 25 (South):** No control issues expected as fire has reached 100% containment.

#### AIR OPERATIONS:

Fire behavior is not expected to require the use of aerial resources. If air resources are needed for logistical support or medical extraction, light general winds should be conducive but periods of breeziness in afternoon/ evening are possible. No significant smoke inversions expected due to diminishing smoke production and good dispersion. Air operations will become more challenging next week as the frontal system arrives.

## SAFETY

Merriam-Webster online defines complacency as “self-satisfaction especially when accompanied by unawareness of actual dangers or deficiencies”. Consider this when completing your missions today and in the coming days.

Ask these fire behavior realtered questions to avoid being unaware of actual dangers:

- Was the vegetation in my work area significantly changed by fire?
- Could vegetation changes lead to things like widow makers, fire weakened trees or stump holes?
- Has the flammability of the vegetation changed in recent dry weather?
- If someone is injured during mop-up, do we have a good field evacuation plan?

***Be sure all elements of your safety plan are in place prior to engagement***

### Driving and Fatigue

- Make sure you are getting your rest when you can! Stick to work/rest guidelines.
- Fatigue can cause us to mentally stray from the driving task.
- It only takes a second of distraction to lose control of our vehicle. The faster you are traveling, the faster you get in trouble.
- Make sure you recognize when you are too tired to drive!

### Situational Awareness

Help maintain your Situational Awareness by doing the following:

- Constantly observing your environment.
- Interpret and process information received.
- Sharing information by discussing the situation.

## Harassment is about Leadership

**How many times have we heard “No matter what our pay grade is we’re all leaders”?  
Stopping harassment in our workplace is all about leadership.**

### Lead by example

When firefighters see their leaders consistently behaving in a professional, respectful way toward *all* crew members and the people they serve, those firefighters will understand that such behavior is the expected standard, and will act accordingly, regardless of how they might feel privately.

If a firefighter pushes the limits of acceptable behavior or violates policy, it is everyone’s responsibility to notice this behavior and correct it immediately.

It is also a leader’s responsibility to explain and demonstrate why fair and appropriate treatment of *everyone* is necessary.

It's not about being nice. It is not about so-called political correctness. Instead, fair and respectful treatment of all is an underlying value that must be in place for us to do this job.

Firefighting is based on trust. Members of our firefighting community must trust each other to treat each other with skill and compassion. There is no place for harassment in a trusting environment.

*Did you know....The longest fingernails ever were over 28 feet in total. American Lee Redmond started growing them in 1979 and set the record in 2008. Sadly, she lost her nails in a car crash in 2009.*

**MOSQUITO FIRE DEMOB MESSAGE**  
**DMOB unit phone # 1 510-951-1476**

Currently, the ICP at Placerville will be the main location where resources will be released. A tentative release page will be in the IAP identifying resources that are timing out and/or excess to the incident.

The time identified for your release is the time to report to finance. You can pick up the 221-checkout sheet in the morning prior to that and gather the other required signatures.

If you have checked out any communication equipment, you will need to return it to the communication trailer located at the Placerville fairgrounds.

For incident replacement, fill out a general message and send it electronically to the ordering manager at [CIIMT10ordering@gmail.com](mailto:CIIMT10ordering@gmail.com). If you have any questions, please call Tracey at 1-916-342-0936 and she can help you with the process.

There is ground support at Placerville for post vehicle inspections and fuel. Currently, vehicle inspections can be done at Sugar Pine so equipment does not have to travel to the ICP.

If you are at Sugar Pine, you may utilize sending in your finance documents electronically. Please follow the guidelines in the finance message and have **patience** when receiving your draft or final documents.

Finish the process by coming back to DMOB with your completed 221 or calling the number above to set your travel home.
