**SHIFT DATE:** 9/11-9/12  
**FORECAST ISSUED:** 2000 9/10

**NAME OF FIRE:** Mosquito  
**UNIT:** TNF  
**SIGNED:** Ryan Walbrun-IMET  
**Incident Meteorologist**

**WEATHER DISCUSSION:** Skies will remain mostly cloudy with the smoky inversion lingering over the fire for much of the day which will keep the overall environment stable. There is about a 10% chance of a stray thunderstorm drifting off the Sierra Crest that could impact the fire. Otherwise the overall trends will be cooler than normal with humidity values trending wetter. General winds will remain light and from the southwest along the ridges with light diurnal winds due to smoke shading. Smoke settles over the fire again tonight with light winds and moderate humidity recovery.

**Sunday Weather:** Thick smoke through midday or early afternoon with passing mid and high clouds. Partial clearing possible mid to late afternoon. A 10% chance of an afternoon thunderstorm.

**TEMPERATURES:** 84-88 below 2000 feet and 78-83 2000-4000 feet. Coolest under thick smoke.

**MINIMUM HUMIDITY:** 24-34% A trend of 2-5% wetter.

**20 FT WINDS:**

**RIDGETOP** - Light early then becoming Southwest 4-8 mph afternoon hours.

**SLOPE/VALLEY** - Light through midday then upcanyon 3-7 mph gusts 10-12 mph late afternoon.

**INVERSION:** Strong morning inversion only slowly lifting by 1400 hours. **MIXING HEIGHT:** 4000 feet

**Sunday Night:** Heavy smoke settling over the area with light winds and good humidity recovery.

**TEMPERATURES:** 63-67 a trend of 2-4 degrees cooler.

**MAXIMUM HUMIDITY:** 50-60% a trend of 5-10% wetter

**20 FT WINDS:**

**RIDGETOP** - Southwest 5-10 pm through sunset then turning East 4-8 mph.

**SLOPE/VALLEY** - Evening upcanyons 4-8 mph thru sunset then East downcanyon 2-5 mph

**STABILITY/INVERSION:** Strong inversion setting up overnight. **LAL:** 1

**OUTLOOK FOR MONDAY:** A weak trough will approach the West Coast on Monday with slightly stronger Southwest winds. A stray shower possible but no wetting rain and likely just some virga passing by. Temperatures trending near to below normal (75-85) with moderate humidity (28-38%).

**EXTENDED FORECAST:** A trough along the West Coast will keep onshore winds in place with temperatures trending near or even slightly below normal this week. General winds West to Southwest with better clearing. Highs mid 70s to mid 80s with lows 55-65 through midweek. Humidity 35% days with good recovery at night.

## FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 2	TYPE OF FIRE: Wildland
FIRE NAME: Mosquito	OPERATIONAL PERIOD: 9/11-9/12, 0700-0700
DATE ISSUED: 9/10/2022	TIME ISSUED: 2000
UNIT: CA-TNF-001371	SIGNED: <i>Jonathan M. Pangburn</i>
	Typed/printed: Jonathan Pangburn, FBAN

### INPUTS

#### WEATHER SUMMARY:

#### COOLER WITH LIGHT WINDS

Cooler with higher RH.  
 Temp: 85-88 max; 63-67 min  
 RH: 25-30% min; 50-60% max  
 Wind: SW 4-8 day; NE >5 night

### OUTPUTS

#### FIRE BEHAVIOR

##### GENERAL:

Smoke coverage dictates overall fire behavior. Along with increased RH and lower temps, fire behavior should be subdued with lack of clear air. However, fuels are critically dry with record-breaking ERC and BI values. The fuels can generate sufficient heat to overpower the smoke inversion – don't let your guard down.

In the absence of weather conditions outside the forecast or extreme fire behavior conditions expect:

	Max. Flame Length	Max. Rate of Spread	Spotting	Probability of Ignition
Grass	<5' (1.5 m)	30-40 ft/min (0.5-0.7 km/hr)	< 0.1 mile (0.2 km)	45%
Grass-Shrub	5-10' (1.5-3 m)	20-30 ft/min (0.3-0.5 km/hr)	< 0.3 mile (0.5 km)	45%
Shrub	10-20' (3-6 m)	60-70 ft/min (1-1.3 km/hr)	< 0.3 mile (0.5 km)	45%
Timber Understory	5-10' (1.5-3 m)	10-15 ft/min (0.2-0.5 km/hr)	< 0.2 mile (0.3 km)	40%

**\*\*minimum safety zone size is 0.8 acre (0.3 Ha) for a Strike Team of Engines in Brush.**

**\*\*minimum safety zone size is 0.3 acre (0.1 Ha) for a Strike Team of Engines in Timber Understory, Grass, Grass-Shrub.**

##### SPECIFIC:

**Branch III / V:** Areas of unburned fuels could present challenges to control lines. Watch for rollout.

**Branch X:** Prominent ridgetoplines & large drainages in alignment with wind. Potential for larger growth in Middle Fork American River, El Dorado Canyon, & Long Canyon. American Fire area now 9-year-old Grass-Shrub.

**Branch XV:** Potential for fuels-driven fire. King Fire mix of 8-year-old Grass-Shrub and Timber Understory. If fire establishes in Rubicon River, watch for wind eddies driving fire in multiple directions.

**Branch XX / XXV:** With the light SW wind, area of greatest potential for clear air. Expect attempts at plume development. Watch for rollout in Whaler Creek and Otter Creek.

##### AIR OPERATIONS:

Anticipate poor visibility with little improvement in smoke coverage. SW wind may open western flank in Branch XX and XXV.  
 Mixing height: 4,000 ft. AGL, Transport winds: SW 4-8 mph, Sunrise 0641, Sunset 1918.

### SAFETY

Don't become complacent due to higher RH & lower temps. Volatile fuels + very steep canyons present a chance for major fire growth and fire behavior.

# Fuels and Fire Behavior Advisory

## Northern California

September 2<sup>nd</sup>, 2022

**Subject:** Potential for extreme fire behavior due to critically elevated fire danger indices, low live and dead fuel moistures, and very hot and dry conditions across much of northern California.

**Discussion:** An extended period of hot, dry weather with embedded periods of enhanced winds will impact Northern California. The elevated fire weather concerns with fuels reaching their yearly minimum moisture values will create conditions conducive to long range spotting, rapid fire growth, and high resistance to control.

**Difference from normal conditions:** The current values for Energy Release Component (ERC) are at or above the 90<sup>th</sup> percentile for the majority of Northern California, with live fuel moistures dropping to critical levels as herbaceous and woody fuels cure. These conditions will be exacerbated by a predicted heat wave, resulting in anomalous daytime highs with little relief in temperature or humidity recovery overnight. Some PSA's, may reach daily record ERC values, with all covered PSA's predicted to reach or exceed the 97<sup>th</sup> percentile for an extended period. The combination of extreme ERC's with high temperatures and poor overnight humidity recovery is highly correlated with extreme fire behavior in Northern California.

### Concerns to Firefighters and the Public:

- The advisory coincides with the Labor Day holiday weekend that is likely to result in increased outdoor recreation and visitor use to public lands across Northern California. The increase in public use carries an increased risk of fire starts as well as potential for evacuations of visitors/ recreational users in the event of a fire starting.
- Energy Release Component (ERC) in areas covered by this advisory are at or above the 90<sup>th</sup> percentile and are expected to approach or exceed the 97<sup>th</sup> percentile. **Anticipate increased spread rates, long range spotting, and active nighttime burning.**
- The combination of persistent drought, a building heat wave, and a very dry atmosphere will continue to decrease already low fuel moisture values:
  - 1000-hour fuel moistures are below average and approaching the 90<sup>th</sup> percentile.
  - Live woody fuel moisture in brush is near or slightly below average, making them readily available and will likely reach critical levels because of the forecasted hot, dry weather.
  - The above average herbaceous fuel load at low and mid elevations (below 5,000 ft.) is fully cured, with high elevation herbaceous fuels rapidly curing during the hot, dry forecast.
  - Higher than average surface fuel loading is present in areas that experienced winter snow and ice storms in the Coast Range and northern Sierra Nevada.
- **Expect fires to ignite easier and spread faster. Do not expect fires to exhibit reduced fire behavior when entering areas of live fuels; anticipate increased spread rates and spotting.**
- Periods of enhanced winds are expected during the hot and dry period. Given the current and anticipated fuels conditions, increases in winds will make direct attack of any new starts difficult and may hamper use of aerial resources.
- Review the current North Ops Outlooks and national fuels and fire behavior advisories.

### Mitigation Measures:

- Suppression actions need to be based on good anchor points, escape routes, and safety zones. **Remember LCES. Experienced lookouts are essential under these conditions.**
- Base all actions on current and expected behavior of the fire. **Augment initial attack resources as incident activity dictates**
- Fire managers should be aware of high use recreation and visitor sites in their area. **The holiday weekend will bring increased visitor use, increasing risk of starts during critical fire weather.**

**Area of Concern:** Northern California except for the following Predictive Service Areas: North Coast, Bay Marine, and west of Highway 101 in Mid-Coast to Mendocino.

# Mosquito Fire – Safety Message

INC #CA-TNF-001371

DATE: 9/11-9/12/2022 TIME 0700-0700 Day/Night Shift

## LIMITED MEDIVAC CAPABILITY DUE TO PERIODS OF SMOKE INVERSION

- Assign personnel with Advanced Life Support capability on the line.
- Cache emergency equipment (backboards, wheeled stokes, etc.) in various locations on the line.
- Assign Rapid Extraction Modules (REM) to respond in absence of air evacuation.
- Maintain ambulance at closest access point.
- Keep line personnel informed of this issue. Safety briefings to stress that extra care should be taken with high-risk tasks (i.e. tree falling, chainsaw use, etc.).
- Supervisors ensure that personnel with severe reaction to bee sting, etc. have “epi-kits” or consider leaving such individuals in camp.

### Unfamiliar With Weather And Local Factors

- Base all actions on current and expected fire behavior.
- Post lookouts.
- Establish escape routes and safety zones.
- Take extra caution! Discuss a fire where you relied on information from the local unit (perhaps where your fire knowledge and experience is very different from how they did things – southeast or Alaska).
- Recognize and report visual indicators (clouds, WX obs., cold front passage, inversion breaking).

### Driving Safely with Civilian Traffic

- Maintain a safe following distance and allow space for cars to pass.
- Be diligent in using your mirrors as cars may be passing you.
- Use turnouts when available to let cars pass.
- Stay calm; we are not part of their race.
- Maintain a heightened level of awareness around blind corners.
- Watch out for park visitors that stop to take photos, and block the roadway.
- **Slow down, slow down, and slow down!**

### Hydration and Heat Stress

- Drink water before, during and after shifts
- Carry up to 6 quarts to drink while on the line.
- Drink three quarts of water for each quart of electrolyte replacement.
- Be alert for signs of heat stress in yourself and others.
- Monitor mental status after any stumbling episodes.
- Don't dilute liquid electrolyte replacement drinks with water.
- Take “cool down breaks” as possible.

For federal employees associated with the Mosquito Fire, if you are injured, please contact the COMP UL for the Authorization for Treatment (CA-16). We can issue the form directly to the hospital or clinic, but we need full names and SSN for the required forms prior to being able to do that. The employee or supervisor should contact me as soon as possible or upon arrival at the hospital, whichever is convenient.

For claims there are different forms needed based on the circumstances of the property loss or damage. Please contact me first to find out which forms are appropriate for your situation, and what additional information might be needed. This will expedite the process.

Unserviceable items must be turned into COMP/FINANCE if you are unable to replace at Supply. If items are lost or damaged on the fire line, the fire suppression module must provide a copy of the module's standard inventory with the documentation of broken or unserviceable items.

## Human Resource Message

09/11/01

# Honor the fallen by discovering and giving the best of yourselves!

It's a privilege to work among the ranks of those who run in, when others run out; placing service before self.

For many of us, 9-11 will evoke memories and emotions of that tragic day. We may remember what we were doing, whom we were talking to, and where we were when we heard the news.

So today, let's recall what we learned about our resilience on September 11, 2001. We recall, acts of heroism and we remember once again how ordinary human beings, living their ordinary lives, reacted with extraordinary heroism when – without warning and in an instant – they were thrown face-to-face with the most fundamental questions of human existence. They taught us through their actions that day, what it means to be human. They showed us the immutable value of duty, loyalty, self-sacrifice, and love.

The moment of silence is a respectful manner to honor and remember the day ordinary people turned into extraordinary heroes!

**True courage is being afraid,  
then going ahead and doing your job anyway,**
