Mosquito Fire Weather Forecast

FORECAST NO: 33
PREDICTION FOR: 0700-1900
SHIFT DATE: 10/12
FORECAST ISSUED: 1700 10/11

NAME OF FIRE: Mosquito
UNIT: CA-TNF
Incident Meteorologist: Mike Ottenweller
Signed: Michael.Ottenweller@noaa.gov
616-450-5002

WEATHER DISCUSSION: High pressure off the coast of Oregon will build over the area. This will make for breezy northeast (offshore winds) during the overnight and early morning hours. These winds helped keep humidity recovery in the 20-30% range. Those winds will hold through the early morning before they lighten up and then become southwest/up canyon this afternoon. Expect gusts 12-15 mph once again this afternoon. Temperatures and humidity will be very consistent throughout the week.

Wednesday Weather: Sunny and dry. Breezy along the ridges in the early morning.

TEMPERATURES: 81-84 below 3000 feet and 75-79 3000-5000 feet...no change.

MINIMUM HUMIDITY: 18-23%...down 1%.

20 FT WINDS:

RIDGETOP - North to northeast 8 to 12 mph with gusts 18 mph through 1100, becoming west to southwest 6 to 10 with gusts 15-18 mph.

SLOPE/VALLEY – Down canyon 4 to 8 through 1000, then switching to up canyon 4 to 7 mph, with gusts to 12-14 mph through the afternoon.

INVERSION: Morning inversion lifting around 1100 hours. **MIXING HEIGHT:** 5100 feet **LAL:** 1

Wednesday Night: Clear. Enhanced east to northeast winds overnight, especially along the ridges. Poor humidity recovery again.

TEMPERATURES: 56-63...little change.

MAXIMUM HUMIDITY: 18-25%...down 5%.

20 FT WINDS:

RIDGETOP – West to southwest 6 to 9 mph through 1900, then north-northeast 10 to 15 mph with gusts to 20 mph overnight.

SLOPE/VALLEY – Up canyon 3 to 6 mph early, becoming light and variable, then becoming down canyon 6 to 10 mph at 2200.

STABILITY/INVERSION: Shallow inversion setting up overnight. **LAL:** 1

OUTLOOK FOR THURSDAY: High pressure will dominate the fire area with an area of low pressure off the southern CA coast. This will keep enhanced NE winds over the ridges again Wednesday night into Thursday. Expect warm temperatures and very dry humidity to persist.

EXTENDED FORECAST: Afternoon high temperatures will run 3-5 degrees above normal. RH values will drop into the teens during the day, with limited recovery of 20-35% overnight. There is an outside chance for cooler/moister weather to move in on Monday.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

As warm, dry weather persists, fuels will continue to become more available following mid-September precipitation. Energy Release Component (ERC) values have increased to near 90th percentile values and may break some daily records. **This trend will increase fuel availability and lead to continued increases in fire activity in areas of remaining heat or uncontained fire line.** The increases include potential isolated torching as well as re-burn in areas with significant leaf or needle cast resulting from initial fire activity. Max spotting distances between ¼ & ½ of a mile.

In heavy timber understory and brush fuels, spots across fire lines or new initial attack fires could exhibit flame lengths at or exceeding the capability for direct action without water or air support. Rates of spread will be greatest in areas of slope and wind alignment, but the lack of a strong wind pattern is likely to make initial actions successful. Rates of spread may also be limited in grass and herbaceous fuels greening up from September precipitation, though this impact will wane in the next 1-2 weeks if no additional precipitation occurs.

Consider reviewing pocket cards for local knowledge on fire environment triggers and thresholds:

El Dorado NF ERC Y Pocket Card:
NOTE - wind is NOT part of ERC

Tahoe NF West Side BI Y Pocket Card:
NOTE -wind IS a part of BI

SPECIFIC:

Branch 10 (Div. J): Existing containment lines expected to hold. Remaining Interior heat will result in slow to moderate spread in areas of unburned fuel or re-burn in areas with significant needle cast.

Branch 25 (Div. U): Low flame lengths with low to moderate spread in areas without containment. Isolated torching of brush and small trees is likely as fuels continue to dry and become available.

AIR OPERATIONS:

Air operations may be needed if fire escapes containment or during initial attack support. Inversions will impact air operations until late morning or early afternoon.

SAFETY

The fire has been very mellow for multiple weeks, with limited heat detections via IR flights and none via satellite detection (MODIS/VIRS) in recent days.

If the fire escapes containment or new IA fires occur, burning is likely to be far more aggressive than what your recent observations tell you!

Hazards & Risks

Is your truck S.E.C.U.R.E.?

- S**et parking brake
- E**nvironmental hazards mitigated
- C**hock the wheels
- U**nder carriage inspected
- R**oll up windows
- E**nsure equipment is safe to leave

What do you look for in a fireline parking spot? Look up, look down, look all around.

- Look for cold black, bare soil, sparsely vegetated areas, plowed fields, or other natural or humanmade barriers.
- Be careful to not get stuck in soft soils.
- Complete a walk around looking for ash pits, penetrating stobs, unburned adjacent fuel, snags, or other hazards that may damage the apparatus.
- Do not block the access or egress of others. Be careful to not block dozer lines, safety zones, or helispots.
- Back in and face your danger when turning around.
- Chock your tires.

Working on Steep Terrain: To date, it has been a demanding fire season with tough assignments, long road trips and extended times away from home, with little time to fully rest and recuperate. This can lead to fatigue and lower our situational awareness. Some factors to consider:

- Mitigate the cumulative effects of work on difficult terrain
- Look Up-Look Down-Look Around
- Look for ways around obstacles
- Break up long downhill hikes
- Consider the terrain your crew is accustomed to working in and abilities of your crew
- Listen to that "inner – voice" that so often anticipates accidents
- Ask folks to consider the consequences if they were to fall
- Consider each step

HUMAN RESOURCE MESSAGE

We all know basecamp and fires in general can be stressful. People react to stress in different ways – some joke, some get quiet and some may get grouchy. As we get farther into this fire season, signs of stress may begin to appear. Try to be sensitive if you notice someone has had a sudden mood swing. Talk if they want to – also that’s what I am here for – contact me with any questions or concerns!
