---

**WEATHER DISCUSSION:** Partly cloudy conditions are expected in the morning then becoming mostly sunny, with warmer temperatures. Drier air moving into the area will bring lower afternoon humidity levels, down around 25%. Humidity recovery tonight into Wednesday will also be low, with poor conditions at higher elevations. Winds should be relatively light and follow their typical diurnal patterns, with easterly and down canyon winds in the morning, shifting to up canyon winds with ridge winds west southwest in the afternoon. Some gusty northeast winds could develop tonight for ridges over the eastern side of the fire.

---

**Tuesday Weather:** Partly cloudy becoming mostly sunny in the afternoon. Lower RH recovery.  
**TEMPERATURES:** 75-78 below 3000 feet and 69-73 3000-5000 feet...up 5 degrees.

**MINIMUM HUMIDITY:** 20-29%...down 10 percent.

**20 FT WINDS:**

**RIDGETOP** - East southeast 4 to 8 mph through 1100, becoming west to southwest 5 to 9 mph.  
Gusts to 13 mph in the afternoon.

**SLOPE/VALLEY** – Down canyon 3 to 6 mph through 1100, then switching to up canyon 4 to 7 mph.  
Near DIV J, gusts 10 mph through the afternoon.

**INVERSION:** Morning inversion lifting around 11 am. **MIXING HEIGHT:** 4000 feet **LAL:** 1

---

**Tuesday Night:** Partly cloudy. Poor RH recovery. Breezy along the ridges.

**TEMPERATURES:** 50-56...little change.

**MAXIMUM HUMIDITY:** 23-33%...down 14 percent.

**20 FT WINDS:**

**RIDGETOP** – West to southwest 5 to 7 mph through 1900, then northeast-east 6 to 12 mph with gusts to 20 mph.

**SLOPE/VALLEY** – Up canyon 3 to 6 mph early, becoming light and variable, then becoming down canyon 5 to 9 mph at 2200.

**STABILITY/INVERSION:** Moderate inversion setting up overnight. **LAL** 1

---

**OUTLOOK FOR WEDNESDAY:** Sunny. Temperatures will peak for the week, several degrees higher than Tuesday, into the 80s. Humidity levels will continue to drop, with afternoon minimums dropping into the teens. Recovery Wednesday night into Thursday is expected to be poor again, around 25-30%.

---

**EXTENDED FORECAST:** A pattern change is expected for the end of the week with a cooling and moistening trend. Temperatures will cool significantly with much higher RHs for the weekend. There remains a chance for showers late Friday into Saturday. Gusty northeast ridge winds are possible Saturday night into Sunday.

## INPUTS

**WEATHER SUMMARY:** Clear, dry weather will continue to dominate. The past few days have been cooler with better humidity recovery, particularly at low elevations on the western edge of the fire. A warming and drying trend returns today, with poor to very poor RH recoveries at mid and upper elevation overnight. Enhanced evening/overnight easterly/downcanyon winds are possible through the forecast period.

**\*See daily Weather Forecasts for details \***

	Day	Night
<b>Sky Weather</b>	Scattered clouds	Clear except for smoke under inversions
<b>Temp (F)</b>	Warming to upper 70's/low 80s	Mid 50's to low 60's
<b>RH %</b>	Mid 20's on Tuesday, then decreasing through Thursday, reaching mid to low teens.	<b>Return of poor to very poor nighttime recovery, struggling to reach 20-30% in thermal belts</b>
<b>20 ft. Winds</b>	<b>SLOPE/VALLEY</b> Downslope diurnal winds in AM becoming upslope < 10mph in afternoon <b>RIDGES</b> N-NE winds near 10mph gusting to 20 becoming W-SW PM, gusts near 13 mph.	<b>SLOPE/VALLEY</b> Upslope diurnal winds in PM becoming downslope near 5 mph overnight <b>RIDGES</b> Daytime S-SW winds replaced with breezy N-NE winds, gusts 15- 20 overnight.
<b>Stability</b>	Increasing stability with inversions breaking late morning to early afternoon.	Inversions setting up in valleys with strong thermal belts at mid and upper elevations.

## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL:

Even with cooler temperatures & increasing RH over the last 2-3 days, active interior heat and burning continued. Expect this to enhance as the warming and drying trend develops and overnight RH recovery returns to very poor values. The poor overnight humidity will most impact the eastern flanks of the fire where the largest areas of remaining heat and open line coincide with thermal belts. These areas may experience their lowest humidity values overnight.

Like previous forecasts, the overall fuel complex is readily available and ERC values remain above the 90th percentile. The exceptions are fine fuels in areas of good overnight humidity recovery and areas benefitting from recent green-up.

In the event fire crosses a containment line, interior re-burn in needle cast/leaves, green island consumption or during IA support, expect the potential for problematic fire behavior. This could include isolated torching and flame lengths that challenge direct control efforts without water or air support. Max spotting distances between ¼ & ½ of a mile are likely and may increase if unpredicted winds or terrain channeling are present. Greatest concern for enhanced winds is E to NE winds at ridgetops overnight, though a similar pattern last week did not produce significant wind impacts.

**Consider reviewing pocket cards for local knowledge on fire environment triggers and thresholds:**

El Dorado NF ERC Y Pocket Card:  
NOTE - wind is NOT part of ERC

Tahoe NF West Side BI Y Pocket Card:  
NOTE -wind IS a part of BI

#### SPECIFIC:

**Branch 10 (Div. J):** Existing containment lines expected to hold. Remaining Interior heat will result in slow to moderate spread in areas of unburned fuel or re-burn in areas with significant needle cast.

**Branch 25 (Div. U):** Overall low flame lengths with low to moderate spread in areas without containment. Isolated torching of brush and small trees is likely as fuels remain dry and available for consumption

#### AIR OPERATIONS:

Air operations may be needed if fire escapes containment or during initial attack support. Inversions will impact air operations until late morning or early afternoon.

#### SAFETY

Strong thermal belts and poor overnight recovery can lead to lingering or even increasing fire activity overnight when resources expect less active burning. Be vigilant for fire in new places in the morning!

### **Hazards & Risks**

**Transfer of Command:** Today is Shadow day with CA Team 10. You may see new Division Supervisors, Branch Directors, and other team members out in your areas getting familiar with the areas they will be working in the following shift. Please keep in mind challenges that come with transfer of command. Some things to think about on transition day: has the communication plan changed? Changes to the IAP in leadership? New Division or Branch you are reporting to? Ensure you are receiving and giving thorough briefings and establish good communication with the incoming resources. Sharing of information is key to the safety of all.

### **Things to revisit during a Transfer of Command:**

- Communications – (has the plan changed)
- Leaders Intent – (Task, Purpose, End State)
- Medical Plan
- Incident Objectives
- Logistics – (ICP, Spike Camps, Travel plans)
- Maps – (Drop Points, Division/Branch Breaks)

**Traveling Home From an Assignment:** We always say, "the assignment is not over until we get to our home." There are many hazards we encounter while traveling home from an assignment. Number one is driving. You have been out for two weeks, (some longer) working long shifts and now you must drive home. Take breaks whenever you feel the need or swap out drivers if you can do so. I know we want to get home as fast as we can but if we drive tired and crash, we may not get home at all. So, take your time, drive safe, and get home healthy.
