Communication

Frequent and effective communication between response organizations and individuals is critical to ensuring the most effective response during wildfire incidents.

Five Communications Responsibilities:

Brief—Use briefings to ensure accurate situation awareness.

Debrief—Use After-Action-Reviews to build accountability and learn from experience.

Acknowledge and understand messages— Acknowledge and ensure clarity of received communications on conditions, assigned tasks, intent, and other important information.

Communicate hazards to others—Use hazard identification, a key component of risk management, to identify personal, tactical, situational, political, or organizational hazards. Good leaders ensure that team members are vigilant for hazards and communicate identified hazards effectively.

Ask - Guard against making false assumptions when the picture is not clear.

Fire Behavior Forecast #12

Name of Incident: Smith River Complex North CA-SRF-000968

TYPE OF FIRE: Wildfire

DATE/TIME ISSUED: 8/20/23 1800

OPERATIONAL PERIOD: 8/21/23 Day Shift

FBAN/FBAN(t): Dean Warner

Weather Summary - See Incident Weather Forecast:

RED FLAG WARNING has been issued for moderate overnight humidity recovery and strong northeast to east winds 20 mph with gusts to 35 mph.

Fuels

Grass Shrub (GS2): Shrubs and brush are 1 to 3 feet high with a low to moderate low of grass intermixed with sparse stems of conifer. Brush is drought stressed from below normal amounts of spring precipitation. These live fuels are cured enough to contribute to fire spread. With winds in excess of 6 mph these fuels can spread in excess of 500 feet/hour. Without wind these fuels will exhibit low rates of spread.

Timber Understory with very high surface fuel load (TU5): Primary carrier of the fire is understory brush with timber and leaf litter. Canopy closure requires eye level winds in excess of 6 mph for rates of spread to exceed 300 feet per hour. The drought stressed brush will contribute to fire spread. Areas of abundant dead fuel loading will exasperate fuel spread.

OUTPUTS: Expected Fine Dead Fuel Moisture: 5%-8%

POI: 60%-70%

Max. spot distance: ½ mile

Active to Extreme Fire Behavior

Haines Index: 5

LAL: 1

ERC: 65=95 percentile

Camp Lookout RAWS

	Fuel/Type Model	Maximum Rate of Spread	Maximum Flame Length
	GS2	¼ mph	10 ft
	TU5	¼ mph	3 ft.

Expected Fire Behavior: Based on the Warmest, Driest, Windiest Conditions Forecasted

General/Potential:

Red Flag Warning conditions will impact all uncontrolled fire edge with western exposure through noon today. Rates of spread can be very high and extreme fire behavior is possible, especially in thermal belt prone areas, ridge tops, or exposed areas. Given the forecasted wind direction and location of all divisions assigned to the North, extreme rates of spread will likely not be realized. Given the jagged rough country, extreme caution is still warranted. These high winds can produce localized eddies and unexpected slope reversals.

Hotel: Fire likely to establish in the North Fork Diamond Creek Drainage. Watch for slope reversal to the west. Afternoon west winds may align with diurnal up valley winds and drive fire progression to the ridge tops of North Fork Diamond Creek. Expect fire to fill in the Diamond Creek drainage between ridge lines where fire is established. Afternoon west winds may align with diurnal up valley winds and drive fire progression to the ridge tops of Diamond Creek.

India: Fire will back off of Monkey Creek Ridge towards the Hwy 199 corridor. Fire will continue to progress up Monkey Creek. Progression will be slow if afternoon winds remain light.

Kilo: Fire will continue to progress north on the east side of Hwy 199, watch for fast uphill runs as the fire moves through small drainages and creates slope reversals.

Air Operations

Smoke and morning inversion will delay aviation until about noon.

Safety

Today the weather may be favorable for our operational effort but high wind events can force fire to produce unexpected events no matter where you are in relation to the fire. Know your escape routes ahead of time and how long it takes to get to a safe area.

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness.
