SIGNED: *James White*

WEATHER DISCUSSION: * Valley elevations = 400ft (Gasquet), Ridgetop elevations = 3500 ft (Camp Six) *
 Stronger marine influence will begin to intrude into the fire area today, bringing generally moister and cooler conditions. Winds will be weak and terrain driven with few gusts over 15 mph. Wind will generally be out of the south throughout the day. While smoke may start out thin thanks to overnight mixing, increasing stability will allow smoke to accumulate and thicken throughout the day Outside of the thermal belt. A very similar, benign pattern will continue into the weekend.

TODAY:

WEATHER: Clear. Moderate smoke in valleys near the fire.
MAX TEMP: Valleys: 70-75°F (6-12°F ↓)
 Ridgetops: 67-72°F (6-12°F ↓)
CHC WTG RAIN: 0% **LAL:** 1

CHC WTG RAIN: 0% **LAL:** 1
MIN RH: Valleys: 50-55% (Little Change)
 Ridgetops: 53-58% (2-4% ↓)
SFC VIS: 1-2 miles, better west in the afternoon

WINDS: Valleys: Morning downslope 2-4 mph afternoon upslope 2-6 mph.
 (20 feet) Ridgetops: Morning northeast 2-4 mph, west 4-8 mph gusts to 14 mph.

MIXING HEIGHT: Rising to 4,000 ft by 1400. **TRANSPORT WIND:** West 6-10 mph.

EXTENDED OUTLOOK: An upper-level trough stalling offshore will bring enhanced marine influence into early next week. Conditions will remain cool and moist with winds remain diurnal and terrain driven. Few gusts will reach 15 mph. Smoke transport should regularly clear out the west side of the fire while creating thick smoke in valleys to the east and north. There is increasing model confidence of some kind of hot, dry east wind mid to late next week.

FIRE BEHAVIOR FORECAST			
Incident Name: SMITH RIVER COMPLEX - SOUTH		Operational Period: Date From: 8/25/23 Date To: 8/26/23 Time From: 0700 Time To: 0700	
Forecast Number: 08	Type of Fire: Wildfire	Unit: Six Rivers National Forest - Gasquet District	
INPUTS			
WEATHER SUMMARY: ***See Fire Weather Forecast***			
FUELS SUMMARY: Due to the below normal amount of precipitation, live fuel moisture levels did not recover this spring, making the shrubs readily available for consumption. There are abundant snag patches within the fire scars; Biscuit (2002), Coon (2015), Eclipse Complex (2017) and Slater (2020). The fuel moistures of the manzanita are around 110% and the 1000-hour fuels 9%, below critical levels. Given the dryness of the vegetation, there is abundant available fuels to continue growth of the Kelly fire.			
OUTPUTS			
FIRE BEHAVIOR			
GENERAL: We are currently in what is peak of fire season for this area of the state. Historically, the fuels along the riparian areas have been resistant to burning, but that is not the case this year. Under smoky conditions, the fire will consume the heavy dead surface fuels and have isolated tree torching where there is a higher fuel load under the timber canopy. Roll-out will continue to be a driver of growth in these areas. When the fire is exposed to a stronger wind or gets established on a steep slope with aligned fuels and topography, expect rapid rates of spread with sustained crown runs and moderate range spotting. The complex experienced several sustained crown run over the last week. <p style="text-align: center;">Fire Danger Indices – 2022 IRPG Page 39 Energy Release Component (ERC): 90th (decreasing) August Average ERC Percentile: 85th 2020 Slater Fire Large growth days (September 10th) - ERC Percentile: 99th Peak Burn Period (1400 – 2000) - Probability of Ignition (PIG): 40% (shaded), 40% (unshaded)</p>			
SPECIFIC: Branch V: The fire will continue to consume the pocket of unburned between Kelly fire north of Hwy 199 along the Patrick Creek. The favorable weather conditions will allow for fire to be brought down to the dozer line above Gasquet on our terms. All signs point to the North Fork of the Smith River being a good checking features, and maybe even a holding feature, west of Stony Creek. There are very little signs of heat in the Corral and Diamond fire, which are burning in the 2002 Bisquet fire footprint. Branch XX: The fire wants to burn along the Siskiyou Fork, between DP55 and DP56. This area sits between the 2020 Slater fire to the north and the 2015 Bear fire to the south and has no record of fire history. Another area of concern is the heat south of the French Hill road as it drops down towards the confluence of Redwood and Craigs Creek in steep, rugged terrain and thick fuels. **Night shift**: There will be cool and moist conditions overnight. The IMET will have a Spot Wx Forecast prepared for the potential of evening/overnight burning.			
AIR OPERATIONS: Sunrise 0606, Last Light 2030 (Daylength: losing 2 min, 35 sec each day) Smoke and marine layer influence will keep air support limited early in the shift. There is a better chance of improved air quality earlier in the operational period.			
SAFETY: Make sure to scout your parking, working, and resting areas, especially in the fire area. Communicate any hazard trees and mitigate them if possible.

	SAFETY MESSAGE

Planning for Medical Emergencies

- Prior to each operational period be able to answer these 3 questions;
 1. **What are you going to do if someone gets hurt?**
 -Where is your closest medical personnel, REMS and ambulance?
 2. **How will we get them out of here?**
 - Can you get the injured to a road or helispot, what will it take to do that?
 3. **How long will it take to get them to a hospital?**
 - Where is the closest hospital, air or ground transport, what conditions can change or affect the transportation timeline?

MAJOR HAZARDS AND RISKS

STEEP TERRAIN FATIGUE SPOT FIRES	ROLLING MATERIAL DEHYDRATION BUCKET DROPS	HEAVY EQUIPMENT HAZARD TREES COMPLACENCY
---	--	---

Be sure all elements of your safety plan are in place prior to engagement

Planning for Safety

Have multiple plans and make them known:

P – Primary Plan (Offense)

Focused on firefighter safety and mission objectives

A – Alternate Plan (Offense)

A fall back plan that closely supports the primary

C- Contingency Plan (Defense)

Entirely focused on firefighter safety

E – Emergency Plan (Defense)

Entirely focused on individual firefighter survival

Snags

Environmental conditions that increase risk from hazard trees:

- Strong or gusty winds from storm cells.
- Air operations - water or retardant drops, rotor wash from helicopters.
- Steep slopes with rolling material.
- Diseased or bug-killed areas (Mountain Pine Beetle).
- Fire weakened timber.
- Reduced visibility from smoke, fog, or darkness.

Remember every day a snag stands after it's been affected by fire, it weakens that much more. Stay alert, look up and live.

Cultural and Heritage Resources:

The area you are working in is rich in cultural and heritage resources which may be encountered while fighting fire. When potential cultural or heritage resource are encountered, that they are not disturbed. There is a potential that undocumented cultural resources will be encountered while fighting fire. It is important when a potential cultural resource is encountered that they are not disturbed in any manner.

Invasive Plant Species – PLEASE USE WEED WASH

The area in and around the Smith River Complex, are home to many sensitive species. Infestations of highly invasive plant species are one of the largest threats to sensitive species populations here. Fish Screens: Coho Salmon Critical Habitat

Most rivers and streams in this area are considered critical habitat for Threatened Coho salmon. Please ensure that Mark 3 and Engine/Tender suction hoses have the appropriate screen attached. Talk to a READ if you think you need a screen!

Port Orford Cedar root disease

Some local drainages are infected with a root disease that spreads via mud and water. Talk to a READ if you need some bleach!
