		Time From: 0700	Time To: 0700	

**3. Objective(s):**

**Strategic Direction**

The Smith River Complex is being managed with a full suppression strategy. Personnel on the incident will implement risk-based decision making aligned to the ongoing ISAP process evaluations. Firefighting operations will implement tactics that offer the highest probability of success to suppress the fire while preventing unnecessary suppression related damage and protecting values at risk. Values include the safety of the public and firefighters; privately and tribally held timberlands; the communities and outlying areas near Gasquet, Pioneer, Lower Jones Creek, Washington Flat, Siskiyou Fork, French Hill, Coon Creek, Rock Creek, and Crescent City, as well as water resources, transportation routes, electrical infrastructure, and natural and cultural resources.

**Leader's Intent**

All resources assigned to the incident will work together as a team to provide the highest level of service, safety, and protection. All resources will ensure transparent, timely, and accurate communication while working to strengthen relationships with each other and with cooperators. All incident personnel should be prepared to take appropriate actions regarding safety, including the identification and mitigation of hazards to yourself and others through timely and thoughtful risk-based decision making. Personnel will manage fatigue by maintaining proper work/rest cycles. CAIIMT 15 expects professional behavior, conduct, and effective communication from all assigned personnel.

- Management Objectives**
- Provide for firefighter and public safety through hazard recognition and application of the risk management process. Coordinate public information to provide timely and continuous situation updates to affected agency partners, cooperators, and public.
  - Coordinate suppression and repair activities with READs to minimize impacts on natural and cultural resources.
  - Effectively manage and track costs for all incidents identified within the Smith River Complex.
  - Close coordination with Region VI fire leadership to ensure effective and efficient management of firefighting resources.

- Control Objectives**
- Implement a suppression strategy that keeps the fires:
- East of the Six Rivers National Forest boundary
  - West of the Six Rivers and Klamath National Forest boundary
  - North of the 15N01 Forest Road

# Fire Weather Forecast

**FORECAST NO: 13**  
**PREDICTION FOR: Wednesday-Thursday**  
**DATE: August 30<sup>th</sup>, 2023**  
**FORECAST ISSUED: 1800 August 29<sup>th</sup>, 2023**

**FIRE: Smith River Complex South**  
**UNIT: CA-SRF-968**

**SIGNED: *Donny Dumont***

**WEATHER DISCUSSION:** \* Valley elevations = 400ft (Gasquet), Ridgetop elevations = 3500 ft (Camp Six) \*  
 Northeast wind regime will be established across the fire area today with strongest winds above surface inversion this morning before trending slightly lighter by afternoon. Smoke transport will be to the southwest with offshore flow, keeping the western side of the fire under smoke. Relative humidity will drop rapidly during the morning as the surface inversion breaks. Winds will increase once again after sunset above 2500ft with poor relative humidity recoveries. Weak surface inversion is still expected to develop in river valleys with smoke and low visibility development. On Thursday northeast winds will end with an approaching Pacific Northwest trough and surface cold front. Expect clouds to increase during the day with a slight chance for light precipitation by night with moderating fire weather conditions.

**TODAY: \*\*\*Near Critical Fire Weather Conditions Possible Above 2500 ft Before Noon\*\*\***

**WEATHER:** Mostly Clear. Heavy smoke in valleys near the fire with smoke transport to the southwest.

 (20 feet) Ridgetops: Northeast 12-15 mph gusts to 28 mph through 11am decreasing in afternoon.

**MIXING HEIGHT:** Rising to 8,000 ft by 1400.      **TRANSPORT WIND:** Northeast 15 mph.

**TONIGHT: \*\*\*Near Critical Fire Weather Conditions Possible Above 2500 ft After Midnight \*\*\***

**WEATHER:** Partly cloudy with valley smoke below 2500ft. Smoke transport to the east overnight.  
**MIN TEMP:** Valleys: 52-57° (Little Change)      **MAX RH:** Valleys: 80-85% (10% ↓)

**THURSDAY:**

**WEATHER:** Mostly Clear becoming mostly cloudy. Heavy smoke with smoke transport shifting to south.  
**MAX TEMP:** Valleys: 69-74°F (10°F ↓)      **MIN RH:** Valleys: 40-45% (5% ↑)  
 Ridgetops: 62-66°F (10°F ↓)      Ridgetops: 30-35% (5% ↑)

**MIXING HEIGHT:** Rising to 7,000 ft by 1400.      **TRANSPORT WIND:** North 10 mph.

**EXTENDED OUTLOOK:** Upper-level low parks almost overhead and stalls out over the region. This will bring a cool marine influenced airmass and moderated fire weather conditions straight into the weekend. Afternoon showers are expected Friday through Saturday along with valley night fog and marine layer stratus intrusions. A drying trend is expected to begin by Sunday but no critical fire weather conditions are on the horizon.

<b>FIRE BEHAVIOR FORECAST</b>			
<b>Incident Name:</b> <b>SMITH RIVER COMPLEX - SOUTH</b>		<b>Operational Period:</b> Date From: 8/30/23 Date To: 8/31/23 Time From: 0700 Time To: 0700	
<b>Forecast Number:</b> 13	<b>Type of Fire:</b> Wildfire	<b>Unit:</b> Six Rivers National Forest - Gasquet District	
<b>INPUTS</b>			
<b>WEATHER SUMMARY:</b>  <b>***Near Critical Fire Weather Today - See Fire Weather Forecast***</b>			
<b>FUELS SUMMARY:</b> Due to below normal precipitation last winter, live fuel moisture levels did not fully recover this spring, making the shrubs readily available for consumption. There are snag patches within the fire scars with scabbier fuels; Biscuit (2002), Coon (2015), Bear (2015), Oak (2017) and Slater (2020). The fuel moistures of the manzanita are around 110% and the 1000-hour fuels 9%, below critical levels. The fire scars, including the 2002 Biscuit fire, are a grass and low shrub fuel type (GS2) and have hampered growth of the Corral, Diamond, Island, Prescott, and western portion of the Kelly fires. Outside of the fire scars, the fuels are dominated by a high load conifer with shrub fuel type (TU5) and are highly variable based on elevation.			
<b>OUTPUTS</b>			
<b>FIRE BEHAVIOR</b>			
<b>GENERAL:</b> We are currently on the tail end of what is peak of fire season for this area of the state. Under smoky conditions, the fire will consume the heavy dead surface fuels with relatively slow rates of spread. Roll-out is a driver of growth in these areas. When the fire is exposed to a stronger wind or gets established on a steep slope with aligned fuels and topography, expect rapid rates of spread with sustained crown runs and medium range spotting. Today, near critical fire weather conditions are expected with low humidity and strong easterly winds. Expect any heat near unburned vegetation, including sections recently burned, to become active.  <b>Fire Danger Indices – 2022 IRPG Page 39</b> Energy Release Component (ERC): 85th August Average ERC Percentile: 75th 2020 Slater Fire Large growth days (September 10th) - ERC Percentile: 99th Maximum Spotting Distance: 0.6 miles Peak Burn Period (1400 – 2000) - Probability of Ignition (PIG): 70% (shaded), 80% (unshaded)			
<b>SPECIFIC:</b> <b>Branch V:</b> The western portion of the complex will have adverse wind conditions throughout the operational period. The flank north of Gasquet will continue to actively back towards the North Fork of Smith River. There is a piece of heat on the Kelly fire across the drainage, due east of the Diamond fire in the Biscuit scar, which will have wind and slope in alignment.  <b>Branch XX:</b> Div. MM and PP will have favorable winds to continue their operations. The fire backing down in the Craigs Creek area will have an adverse wind increasing rates of spread towards the primary control line along the 17N40 road. Fire will remain active along the 405 road in Div. YYVV, but crews should have winds at their backs to continue firing operations to contain the eastern flank of the Coon fire.  <b>**Night shift**:</b> The fire is expected to remain active tonight, especially in the upper elevations exposed to the strong, gusty easterly winds. Conditions should be good to continue firing operation if needed.			
<b>AIR OPERATIONS:</b> Sunrise 0611, Last Light 2022 (Daylength: losing 2 min, 39 sec each day) Smoke will be transporting to the southwest, so expect clearing early in the operational period on the east side of the fire and poor flying conditions over the western portion for most of the day.			
<b>SAFETY:</b> Today is a heads-up day for near critical weather conditions with higher temperatures, lower humidity, and gusty east winds. These winds are from a different direction than usual. Pay attention to your location as it relates to the main fire

## Smith River Complex Incident: Resource Advisor Message

**IMPORTANT: Yellow/Black Striped flagging** indicates resource **AVOIDANCE** areas.

### Cultural and Heritage Resources:

The area you are working in is rich in cultural and heritage resources which may be encountered while fighting fire. When potential cultural or heritage resource are encountered, that they are not disturbed. There is a potential that undocumented cultural resources will be encountered while fighting fire. It is important when a potential cultural resource is encountered that they are not disturbed in any manner.

GPS its location and take a photo, but do not remove or collect anything. Findings of cultural resources should not be reported over the radio. Work with your division to notify a resource advisor for recommendations on how to proceed.

### Invasive Plant Species – PLEASE USE WEED WASH

The area in and around the Smith River Complex, are home to many sensitive species. Infestations of highly invasive plant species are one of the largest threats to sensitive species populations here. Spread via vehicles and foot traffic as well as re-activation via fire is of high concern. To help protect these sensitive places, do not park in and try to avoid areas flagged areas. **Make sure to visit the WEED WASH at end of shift AND at demob.** Located on Hwy 199 on the right just past the Ranger Station.

### Fish Screens: Coho Salmon Critical Habitat

Most rivers and streams in this area are considered critical habitat for Threatened Coho salmon. Please ensure that Mark 3 and Engine/Tender suction hoses have the appropriate screen attached. Talk to a READ if you think you need a screen!

### Port Orford Cedar root disease

Some local drainages are infected with a root disease that spreads via mud and water. To prevent spreading this disease to uninfected areas, all water tenders and engines will apply bleach to their tanks in a 1:1000 ratio (using bleach with 6.0 % Sodium hypochlorite). Talk to a READ if you need some bleach!
