Fire Behavior Forecast #11

Incident: Smith River Cx North CA-SRF-000968	TYPE OF FIRE: Wildfire
DATE/TIME ISSUED: 8/30/23 1900	OPERATIONAL PERIOD: 8/31-9/1/23 All Shifts
FBAN: Dean Warner, Ryan Jones	Signed:  Ryan Jones

Weather Summary - See Incident Weather Forecast: Northeast winds and light rain.

Fuels

Shrub: Shrubs and brush are 1 to 3 feet high with a low to moderate load of grass intermixed with sparse stems of conifer. Manzanita brush and other live fuels are drought stressed from below normal amounts of spring precipitation. These live fuels are cured enough to contribute to fire spread. Given the exposed nature of this fuel type, eye level winds in excess of 6 mph can cause rates of spread to exceed 8 chains per hour. Without wind these fuels will typically exhibit low rates of spread.

Timber litter and shrub: Primary carrier of the fire is understory brush with timber and leaf litter. Expect slow rates of spread under moderate weather conditions. Canopy closure shelters fuels from wind so fire spread will be slow and continuous. Eye level winds in excess of 6 mph will allow fire to reach the canopy, resulting in torching and possible crowning. The drought stressed vegetation and areas of abundant dead fuel loading will promote fuel spread.

OUTPUTS: Expected Fine Dead Fuel Moisture: 6% POI: 60%

Fire Behavior: Active Atmosphere: Unstable Max. spot distance: ¼ mile LAL: 1 ERC: 53 (Near Average) IV Airport	Fuel/Type Model	Maximum Rate of Spread	Maximum Flame Length
	Shrub	8 ch/hr	4 ft.
	Timber litter shrub	4 ch/hr	1 ft.

Expected Fire Behavior is Based on the Warmest, Driest, Windiest Conditions Forecasted.

General/Potential: Regardless of any rainfall today, forecasted weather and dry fuels will support active fire behavior. Fuels are expected to remain available for consumption regardless of overnight RH recovery. Northeast winds should provide favorable conditions for our operational effort (see division specifics). Spotting potential will be severely reduced in most areas, exception will be ridge tops in Hotel and Golf.

Golf: Northeast wind will not be sheltered by topography. Expect favorable winds conditions for operational efforts.

Hotel: The continuation of northeast winds will align with tactical efforts on the ridge tops. Watch for spotting across the line should the wind go more east than north. Northeast wind will align well with the West Fork Illinois and Whiskey River drainages. Unburned areas are unlikely to consume completely.

India: Northeast winds should be favorable for operational efforts. Broken ground could cause winds to swirl or eddy. Spotting across the line remains the primary threat to containment. Do not count on today's precipitation to decrease receptiveness of fuel bed.

Kilo: Fire is not expected to get east of Highway 199, north of the Collier Tunnel. Abundant fuels are available for fire to progress up drainages and to the east.

Night Ops: Northeast or north winds will continue, providing favorable conditions for tactical operations in all divisions.

Air Operations: Expect smoke impacts to aviation assets throughout the day.

Safety: The forecasted weather shows signs of relief in the form of precipitation. Rain amounts are not specific enough to know how it will affect the fire. Now is not the time to let your guard down. If or when the rain arrives we need to maintain the momentum and preserve the work we have accomplished. Always maintain your situational awareness no matter what the fire is doing.

Beetles with a Built-in Smoke Detector?

Through the years several firefighting personnel have encountered beetles during their time on the fireline. The beetles arrive in droves, and when they do, there are often several reports of beetle bites, which are described as a feeling similar to a bee sting.

The G-rated name for these beetles is “fire-chaser” beetles, and they belong to the genus *Melanophila*, a type of metallic wood-boring beetle. These beetles can detect smoke from up to 80 miles away, and use freshly burnt wood – which is sometimes still-smoldering upon their arrival – to lay their eggs.

These beetles detect smoke via two pit organs located in their thoraxes, which is located in between their heads and their abdomens. The pit organs contain very sensitive infrared receptors, and inside each receptor is a tiny pocket of water which expands when heat is detected. This, in turn, triggers a response in the beetles’ nervous system to follow the heat source, even if the fire is not producing smoke.

Researchers have concluded that fire-chaser beetles exhibit a preference to trees that have experienced recent mortality, likely because these trees have more nutrients than those that have been dead a long time. It has also been concluded that fire-chaser beetles prefer dead trees because living trees have defense mechanisms to resist pests, which could also be interpreted as sending a message to the beetles to “bug off.” Pun intended!

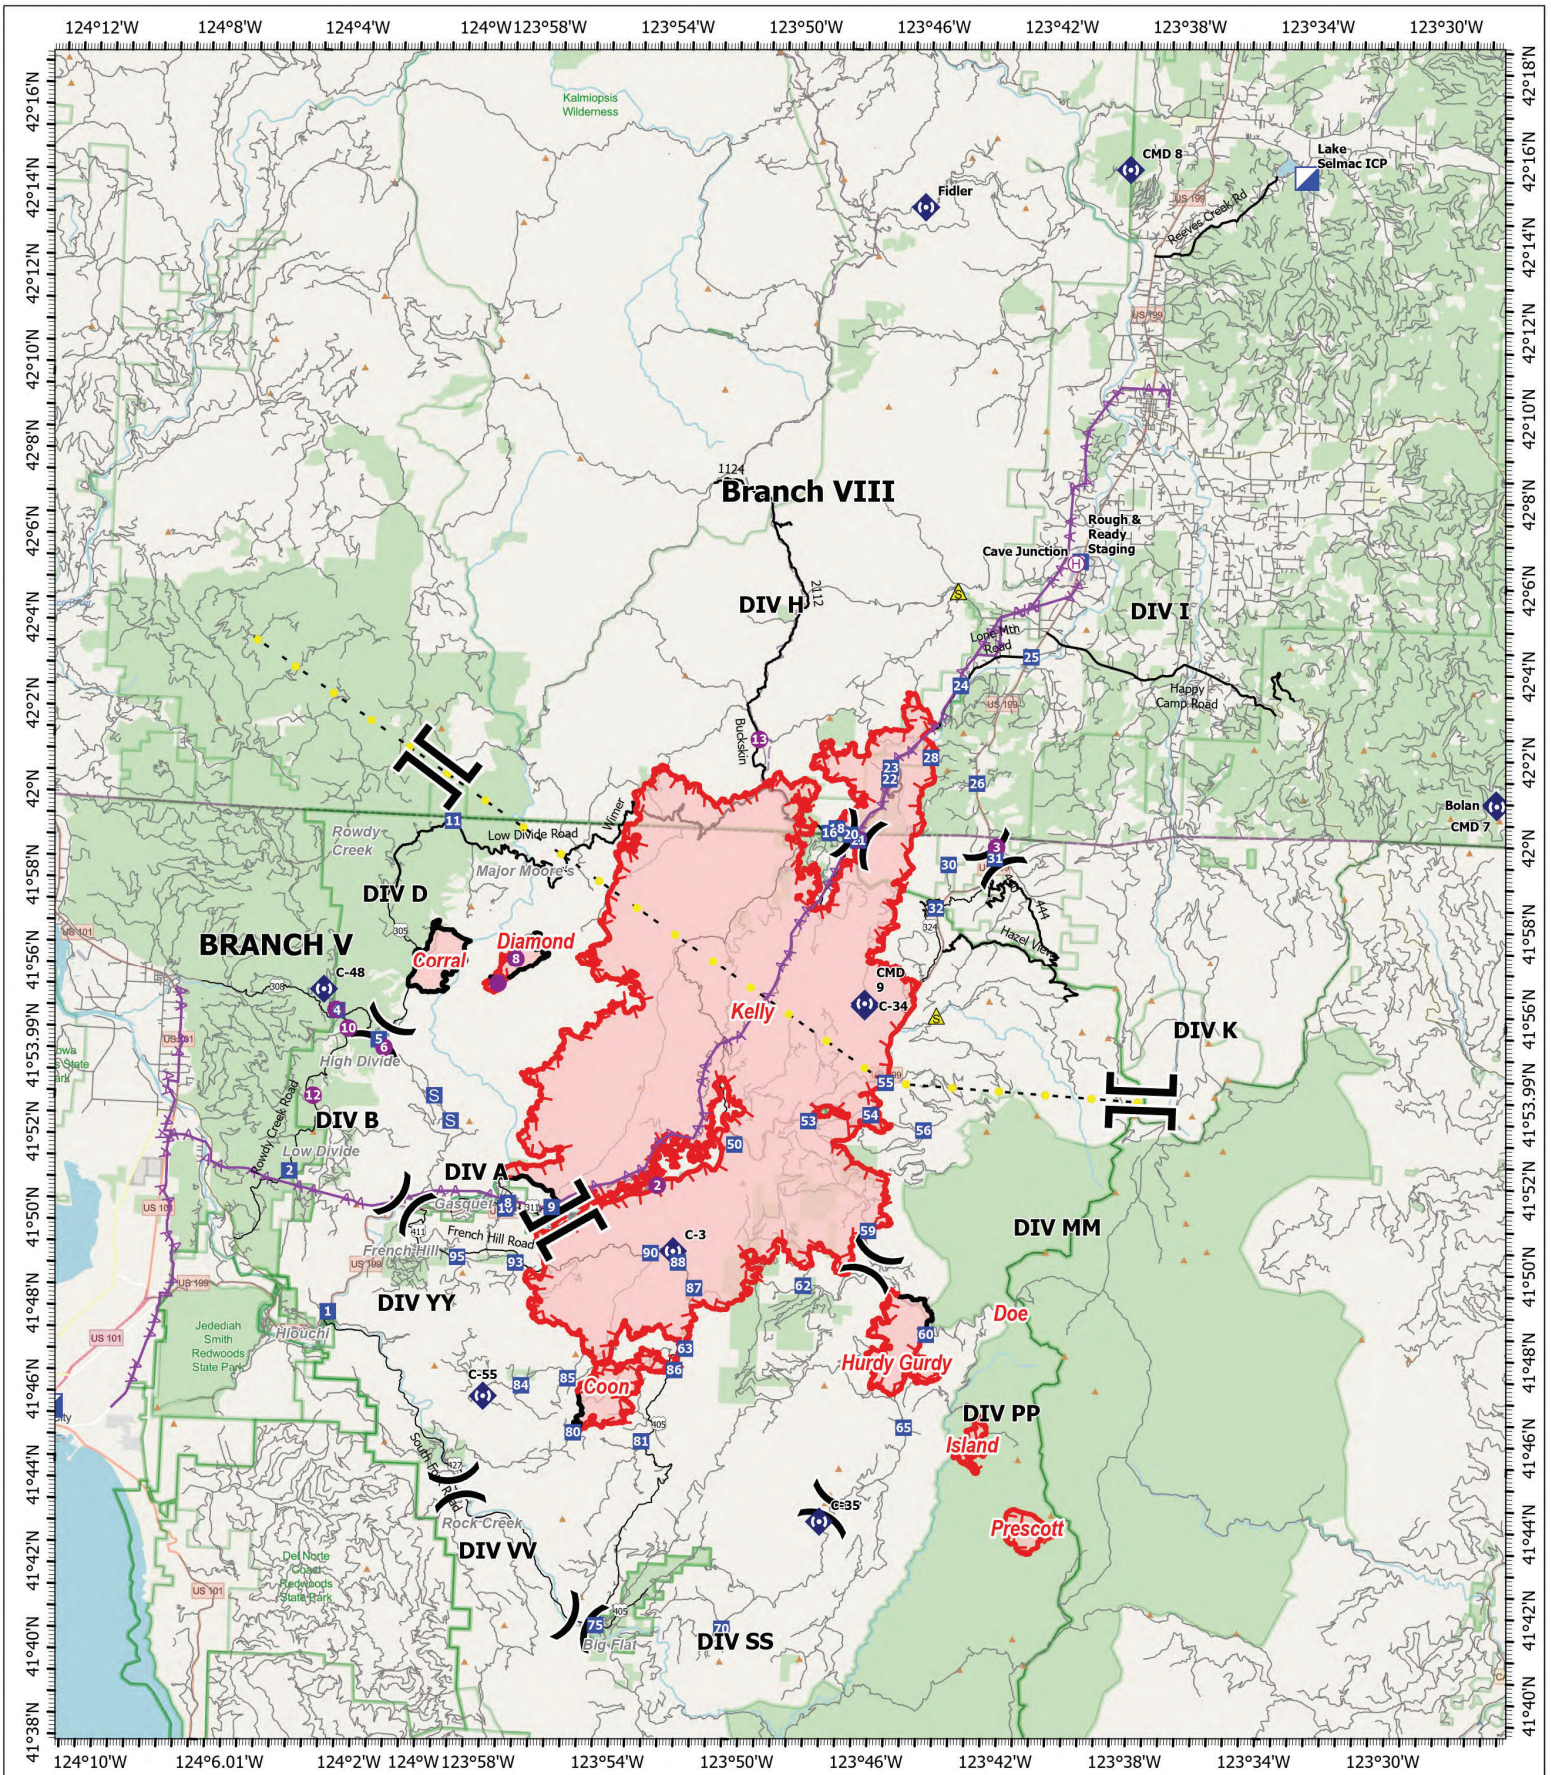

Thanks so much for all your efforts and have a great shift today!

Medical Incident Report

FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A MEDICAL EMERGENCY: IDENTIFY ON-SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use the following items to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report)

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>	
Nature of Injury or Illness & Mechanism of Injury		<i>Brief Summary of Injury or Illness (Ex: Unconscious, Struck by Falling Tree)</i>
Evacuation Request		<i>Air Ambulance / Short Haul/Hoist Ground Ambulance / Other</i>

Incident Name		<i>Geographic Name + Medical (Ex: Trout Meadow Medical)</i>
On-Scene Incident Commander		<i>Name of on-scene IC of Incident within an Incident (Ex: TFLD Jones)</i>
Patient Care		<i>Name of Care Provider (Ex: EMT Smith)</i>

3. INITIAL PATIENT ASSESSMENT: Complete this section for each patient as applicable (start with the most severe patient)

Patient Assessment: See IRPG PAGE 106
