

INCIDENT OBJECTIVES (ICS 202)

1. Incident Name: Smith River Complex North	2. Operational Period: Date From: 09/06/23 Date To: 09/07/23 Time From: 0700 Time To: 0700			
3. Objective(s): Provide for firefighter and public safety by developing and implementing sound strategies and tactics that consider values, responder risk, resource availability, and probability of success. Protect businesses, homes, property, and critical infrastructure in and around the communities of the Illinois Valley including Cave Junction, O'Brien, Takilma, Sunstar, the Highway 199 corridor, and identified values within the planning area. Protect and minimize impacts to cultural sites, Kalmiopsis and Siskiyou wilderness values, critical habitat, and the Smith River Wild and Scenic Corridor. Maintain and enhance relationships with agency partners, cooperators, stakeholders, and the public through timely and accurate information exchange. Ensure long-term strategies are communicated. Provide initial attack support for new starts within the incident TFR or as requested through Oregon Department of Forestry, Rogue Siskiyou and Six Rivers National Forests. Coordinate responses with the local units. Accurately track incident costs and ensure cost sharing measures are identified, applied, and documented for all fires within the Smith River Complex. Provide an atmosphere free of discrimination, harassment, and other forms of inappropriate behavior.				
4. Operational Period Command Emphasis: Thank you to NW 13 and everyone involved in this incident for your hard work and dedication to the mission. Today's shift will be about transition. As the Alaska IMT transitions with NW Team 13, the emphasis will be on communication and information sharing. Every individual on this incident can play a key role in that process. Don't assume everyone has the information you do. Share your successes, hazards, and concerns with the incoming personnel to ensure a safe and efficient transition. While our focus should be on information sharing, our number one objective is firefighter safety. Remain vigilant in your mitigations, awareness of your working conditions and medical plans should you need assistance.				
General Situational Awareness Identify and communicate travel hazards associated with your assigned work area. Identify poison oak in work area and minimize personnel exposure. Monitor fire behavior as fuels dry out. Firing operations need to be communicated before they are initiated.

Fire Behavior Forecast #17

Incident: Smith River Cx North CA-SRF-000968	TYPE OF FIRE: Wildfire
DATE/TIME ISSUED: September 5, 2023 1900	OPERATIONAL PERIOD: September 6, 2023
FBAN: Tobin Kelley	Signed: /s/ Tobin Kelley

Weather Summary - See Incident Weather Forecast: West winds with moderate conditions.

Fuels

Shrub: Shrubs and brush 1 to 3 feet high with a low to moderate load of grass intermixed with sparse conifer. Manzanita brush and other live fuels continue to be drought stressed. Given the exposed nature of this fuel type, eye level winds in excess of 6 mph can cause rates of spread to exceed 8 chains per hour. Without wind these fuels typically exhibit low spread rates.

Timber litter and shrub: Primary carrier of the fire is understory brush with timber and leaf litter. Expect slow rates of spread under moderate weather conditions. Canopy closure shelters fuels from wind, making fire spread slow and continuous with low to moderate winds.

OUTPUTS: Expected Fine Dead Fuel Moisture: 6-92% POI: 20-40%

Fire Behavior: Moderate to active Atmosphere: Stable Max. spot distance: 0.2 mile Wild Rivers ERC%: 64 th percentile	Fuel/Type Model	Maximum Rate of Spread	Maximum Flame Length
	Shrub	3 feet/minute	3 ft.
	Timber litter shrub	1 foot/minute	1 ft.

Expected Fire Behavior is Based on the Warmest, Driest, Windiest Conditions Forecasted.

General/Potential: Effects from recent precipitation are starting to fade as fuels dry. Fuel moistures on high energy slopes (south and west) will drop quickly and expect fire behavior to increase daily. Fuels under dense canopies will lag behind exposed fuels, but are expected to increase as weather warms. ERC values will continue to trend upward but still below average. Within a couple of days fuel dryness will be above average.

Golf: Unstaffed. Fire has been low intensity and expect this to continue.

Hotel: Fuels on south and west slopes will continue to dry and aid in fire activity, expect to see increase in moderate fire activity. Light winds and general wind direction should aid tactical firing operations.

India: Expect fuels under dense canopies to be available for consumption. West winds have the potential to increase smoldering and spread in interior pockets that have partially burned.

Kilo: Fire is not expected to get east of Highway 199, north of the Collier Tunnel.

Air Operations:

Clear air and stable conditions will make for excellent aviation operations.

Safety: Warming and drying conditions will allow the fire to increase in activity. Be aware of potential for slope driven runs in light fuels that could rapidly move uphill on slopes exposed to sun.
