

INCIDENT OBJECTIVES (ICS 202)

1. Incident Name: Smith River Complex North	2. Operational Period: Date From: 09/10/2023 Date To: 09/11/2023 Time From: 0700 Time To: 0700															
3. Objective(s): Provide for the safety of firefighters and the public through the utilization of strategic and deliberate risk processes. Develop strategic plans to protect businesses, homes, property, and critical infrastructure in and around the communities of the Illinois Valley including Cave Junction, O'Brien, Takilma, Sunstar, the Highway 101 and 199 corridors, and identified values within the planning area. Protect and minimize impacts to cultural sites, Kalmiopsis and Siskiyou wilderness values, critical habitat, and the Smith River Wild and Scenic Corridor. Engage resource advisors to effectively protect natural resource values and minimize impacts of suppression efforts. Engage in transparent communication and enhance relationships with agency partners, cooperators, stakeholders, and the public through timely and accurate information exchange. Ensure long-term strategies are communicated. Provide initial attack support for new starts within the incident TFR or as requested through Oregon Department of Forestry, Rogue Siskiyou and Six Rivers National Forests. Coordinate responses with the local units. Accurately track incident costs and ensure cost sharing measures are identified, applied, and documented for all fires within the Smith River Complex. Provide an atmosphere free of discrimination, harassment, and other forms of inappropriate behavior.																
4. Operational Period Command Emphasis: Operationally, we need to take the extra time we need to find the right location with the least exposure and the highest probability of success. The operation and the location need to have the ability to be logistically supported.																
General Situational Awareness Fighting fire successfully relies on good timely decision making, its important to not get coaxed into fighting fire on the fire's terms. Finding a more advantageous location or timing that a plan is executed can limit the exposure to firefighters. Good thoughtful feedback from the ground can save lives.

Smoke from fires within the region will create lower visibility, especially south of the state line into California, and east toward Medford. A weak cold front from the Pacific will cross the area tonight, this may freshen up winds a bit in addition to providing better humidity recovery during the overnight and slightly cooler temperatures for Monday. Winds will primarily be out of the west or southwest today, then becoming northwest behind the front tonight, trending northeast by daybreak Monday.

Fire Behavior Forecast #21

Incident: Smith River Cx North CA-SRF-000968	TYPE OF FIRE: Wildfire
DATE/TIME ISSUED: September 9, 2023 1900	OPERATIONAL PERIOD: September 10, 2023
FBAN: Tobin Kelley	Signed: /s/ Tobin Kelley

Weather Summary - See Incident Weather Forecast: Similar conditions to yesterday.

Fuels

Shrub: Shrubs and brush 1 to 3 feet high with a low load of grass intermixed with sparse conifer. Manzanita brush and other live fuels are moderately available for consumption with independent fire. Low rates-of-spread are expected in this fuel type without strong winds to drive the fire.

Timber litter and shrub: Primary carrier of the fire is understory brush with timber and leaf litter. Expect slow rates of spread under moderate weather conditions. Canopy closure shelters fuels from wind, making fire spread slow with low to moderate winds.

Fire Behavior: Minimal to moderate surface fire, occasional torching Atmosphere: Stable Max. spot distance: 0.25 mile Wild Rivers ERC%: 76 th percentile (up 2 points) BI: 75 th percentile	Fuel/Type Model	Maximum Rate of Spread	Maximum Flame Length
	Shrub	3 feet/minute	2 ft.
	Timber litter shrub	3 feet/minute	3-5 ft.

Expected Fire Behavior is Based on the Warmest, Driest, Windiest Conditions Forecasted.

General/Potential: South and west aspects will see the most effect of the drying trend. Fuels are now dry enough to sustain moderate to active fire activity. Expect creeping, surface fire and occasional tree torching in heavier canopies. Northerly aspects are still seeing higher fuel moistures from the last precipitation event. ERC and BI values will continue to trend upward but remain below average.

Golf: The timber stand in the bowl of Taylor Creek will be slower to react to the drying trend due to the aspect. Fire has been low intensity and expect this to continue.

Hotel: Fuels on south and west slopes will continue to dry and aid in fire activity, expect to see additional activity in timber stands which are dry enough to support moderate to active fire.

India: Little activity beyond smoldering and creeping expected. Potential remains for unburned islands of fuel to carry surface fire as warming and drying continues.

Kilo: Expect smoldering and creeping fire activity. Continued drying may bring up hot spots along the division.

Night Operations: Expect similar fire activity to last night. Firing operations in Div H will burn likely through the evening as conditions permit. Diurnal winds may push fire downslope until relative humidity and temperature limit this activity.

Air Operations:

Another day of stable air but visibility may start to be impacted by regional smoke.

Safety: Other fires in the area are starting to demonstrate increased fire activity. Conditions are becoming more conducive for previously undetected hot spots to become active and spread.

SAFETY MESSAGE

INCIDENT's: Smith River Complex North

DATE: September 10th, 2023

Have you ever filled a water tank and noticed it has leaks?
Maybe multiple leaks, to the point you wonder if it's better to order a new tank because water is shooting out every side?

Then you notice that inside the tank someone had already patched the tank to cover up multiple 1 to 2-inch holes. And now you are plugging holes with ear plugs to slow water loss....

How do you effect change within you sphere of decision space?

On your division, within your crew or on your squad, it is critical to recognize, communicate and address the holes that need plugged that effect the real time risks to responders.

- Maybe near misses with vehicle accidents?
- Maybe some human factor that could be affecting a risk informed decision?

How can you effect change and slow down or stop those near misses?

Human Resource Message

Communication is a two way street. When communication goes only one way, it becomes a traffic jam and turns into an issue. Some examples are:

- Someone irritating you and getting on your nerves, but you don't say anything until it boils over and causes a crash.
- A misunderstanding of what someone was trying to communicate to you, but you didn't take the time to clarify what was said and just stewed about it.
- It can be like the telephone game. It starts with specific information and by the time it gets to the end it very different than what was first communicated.

Whatever it is, clear the communication lines in a respectful manner and make it a smooth, safe flowing, two way street!

“The single biggest problem in communication is the illusion that it has taken place”by George Bernard Shaw

Mop-Up Standards, Waterbar guidelines, and the Top 5 Natural Resources Take-homes from Smith River Complex Fire

In addition to the upcoming task of constructing waterbars during Suppression Repair, as well as the current Mop-Up standards, here are the top 5 messaging points and/ or tidbits of info that we have shared that will prove useful whenever you are fighting fire in the Illinois Valley. Thank you for your most excellent work here and safe travels as you time out and return to your home units!

Constructing EFFECTIVE waterbars on firelines includes attention following the 5-D's; Distance, Divert, Diagonal, Discharge, and Dissipate. The purpose of waterbars is to slow water down as it travels downhill. When constructed correctly, waterbars help reduce excessive erosion and mitigate sediment transfer to streams and rivers.

Fireline Slope	Maximum Spacing
1-6%	300 ft.
7-9%	200 ft.
10-14%	150 ft.
15-20%	90 ft.
21-40%	50 ft.
41-60+%	25 ft.

Figure 1. *The Five-D System for Effective Fireline Waterbars.* Furniss (undated) PNW

Mop-Up Standards for BLM- and USFS-Managed Lands

The following are the mop up standards for BLM- and USFS-managed lands. The intent of mop up is to make the likelihood of the fire escaping the containment perimeter very unlikely through the rest of the fire season or onset of significant rains. Mop up will be implemented to the degree and location necessary to meet the stated intent.

- The BLM's and USFS's approach to mop up, in order to minimize unnecessary exposure to firefighters, is not to specify a distance or percentage "standard." There may be parts of the fire that are too dangerous for any mop up (e.g., snag patches, extremely steep/rocky terrain).
- To reduce hazards during mop up, fall snags that pose "imminent" danger to firefighters (ref **Field Guide for Danger Tree Identification and Response**, RG-NR-FP-PR-01-08).
- Spot fires outside the control lines will be mopped up commensurate with exposure and values. The perimeter of spots will be mapped in GIS.
- Mop up of partially burned areas further inside the lines will be the exception and determined on a case-by-case basis by the Resource Advisor, Safety Officer, and Operations depending on the specific values at risk.
- As mop up specifications are met on a Division, Operations will work with the Resource Advisors to develop a plan for the resources and equipment to be left in place that may be required for future contingency actions.

Mop-up Standards for State and Private Lands

The following are the mop up standards for Smith River Complex North **on State and private lands**. At no time shall firefighter safety be compromised to meet these standards. All hazards associated with these standards will be mitigated based on experience and deference to firefighter expertise prior to implementation.

- Mop up to the degree necessary to make the likelihood of escape very low, with mop up based on experience, terrain, fuel types, and fuel conditions, and current/predicted weather conditions. Engage in dialogue with your supervisor in order to determine the appropriate distance.

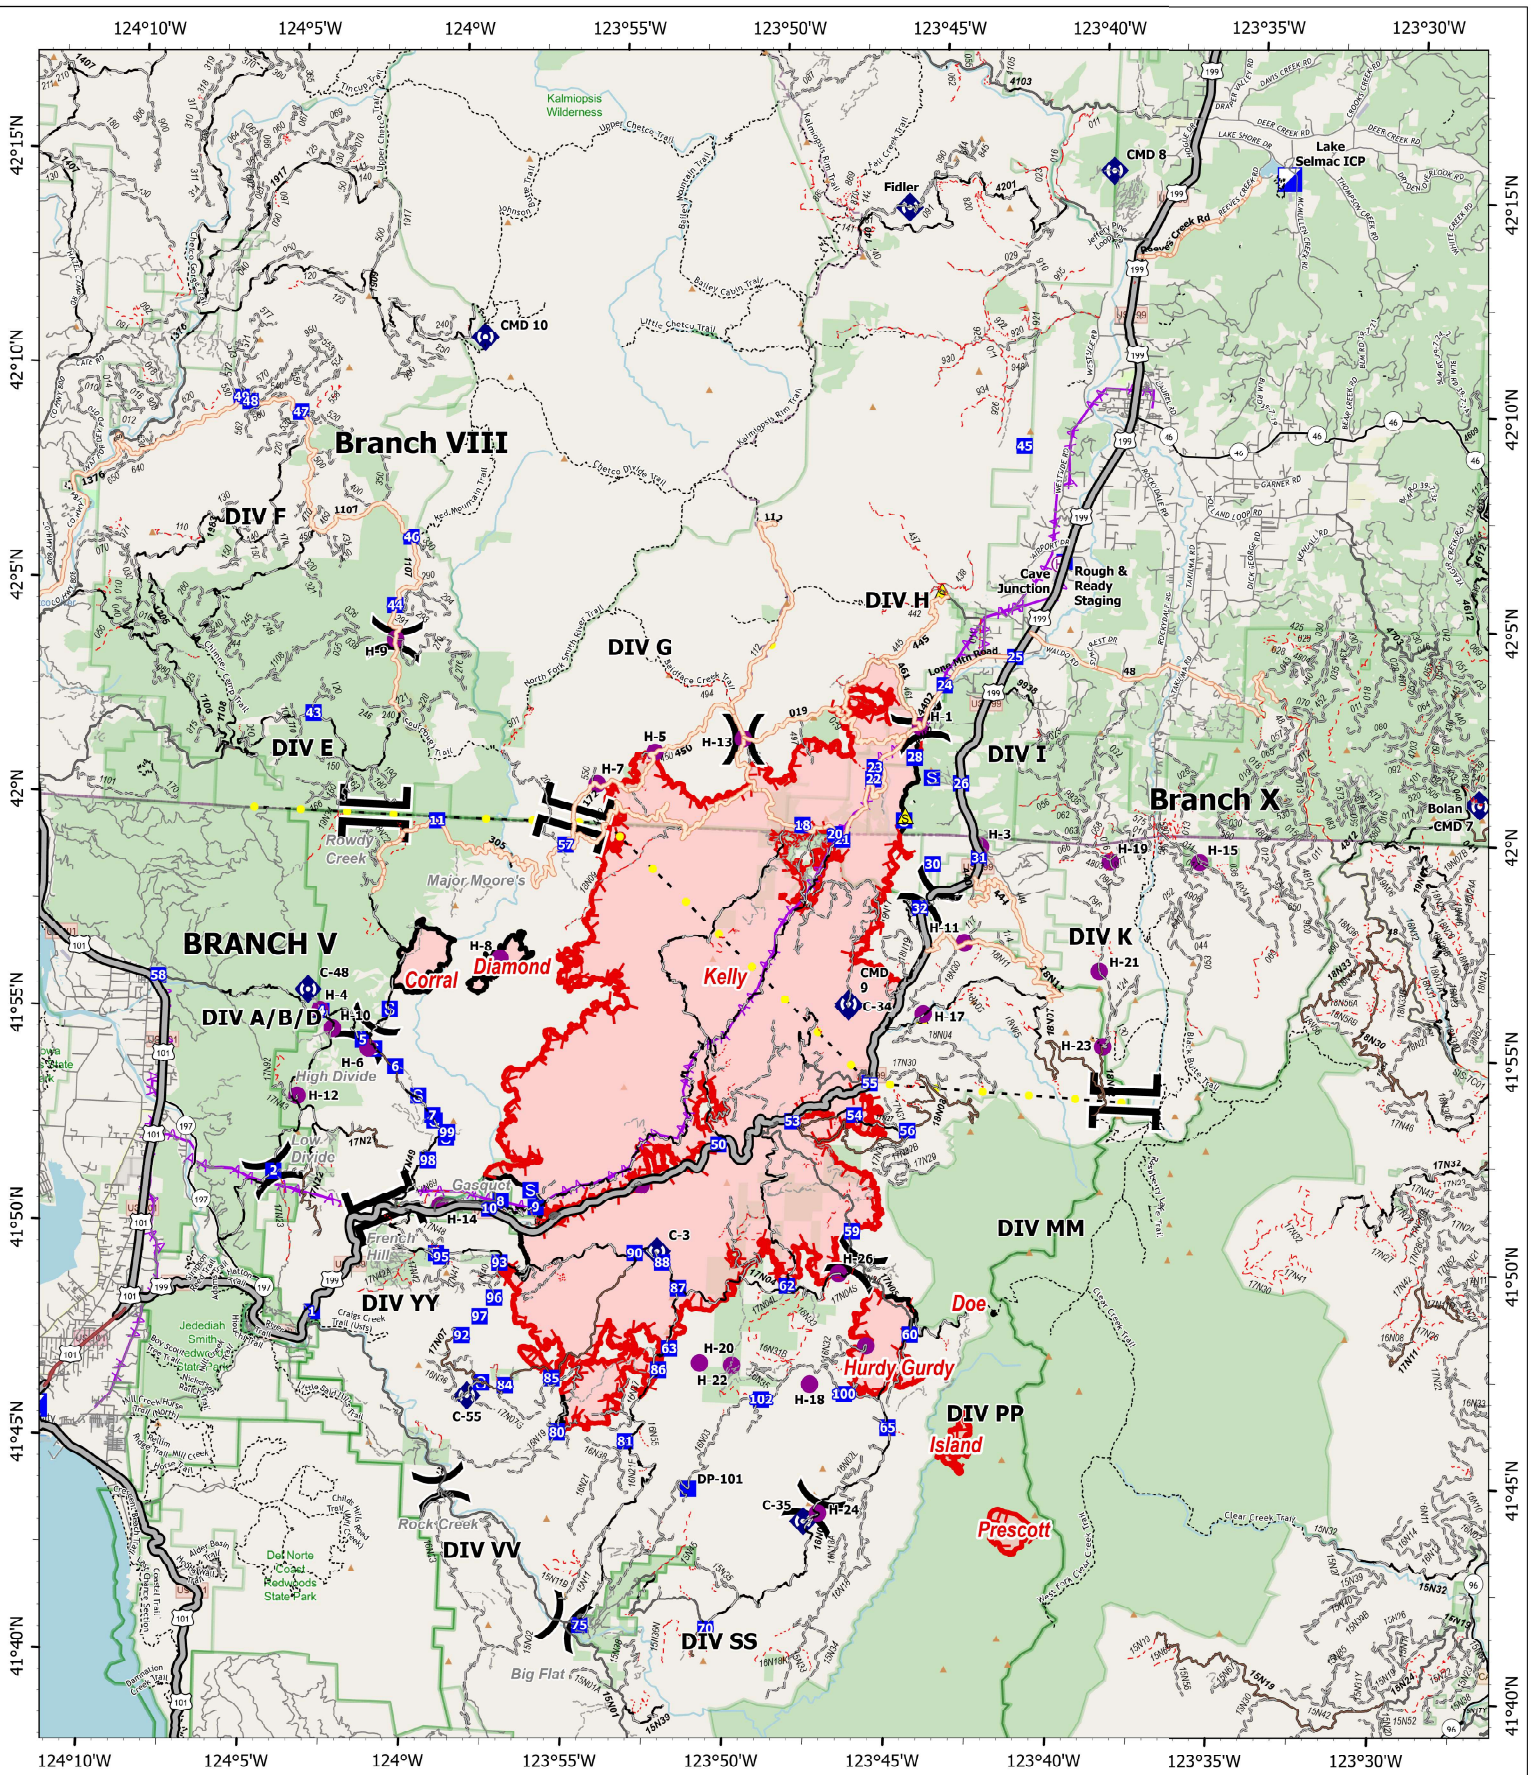

- Snag and hazard tree removal: complete felling of all snags and fire damaged trees that have been identified as a safety concern or have the potential to cause spotting outside the control lines.
- Mop up a minimum of 200 ft or 1 tree length along the perimeter with the following exceptions;
 - Some areas may require additional mop up commensurate with the risk of possible escape (i.e. dirty-burn areas). Verify mop up of perimeter with the use of IR equipment in those areas of heavy fuel concentrations.
 - Structures - 300 ft
 - Dirty burn areas – 300 ft
 - Unburned areas within fire perimeter (i.e. islands, drainages, etc) – 300 ft.
- Fire must be secured from rolling material or falling trees/snags crossing the fire lines.
- Avoid creating erosion when using water to mop up.
- Mop up all spot fires outside the main fire perimeter 100%.
- Knock down and scatter all dozer berms during mop up operations.

Top 5 Natural Resource Take-Homes from the Smith River Complex North

- 1) **WE ARE WITHIN THE RANGE OF PORT-ORFORD CEDAR AND ROOT-ROT, WHICH IS WHY WE BLEACH OUR WATER WITH A 1% SOLUTION (BLEACH KILLS THE ROOT-ROT SPORES).**
- 2) Control efforts and economic losses stemming from noxious weeds are extremely costly – upwards of \$125 million, in Oregon alone. In the Illinois Valley, we have a noxious weed, Alyssum (*Alyssum corsicum* and *Alyssum murale*), that is the only infestation known in North America. Noxious weed seeds can remain viable for 1 – 80 years, depending on species; Alyssum seeds can remain viable for 10-20 years. The best thing we can do is to prevent the spread; use the weed wash whenever possible, check your clothing for seeds, and ensure no plant parts/seeds make the journey home with you.
- 3) Avoid drafting from smaller streams – if you need to dam up a source, ensure at least 50% of the outflow remains, and pull the fine gravel (which salmonids use for spawning) to the side so that it can be easily re-integrated into the pool. And make sure your absorbent pads are changed when they become 50% saturated.
- 4) **Serpentine soils account for a high number of native endemic plants in this area, including the California pitcher plant (*Darlingtonia californica*), a carnivorous species that is found fens, or areas with constant flow of shallow water.**
- 5) You'd be surprised how long trash persists; a Ziplock bag takes ~ 1,000 years to decompose! Thanks for keeping our yard clean!!

Final fun fact; one-half inch of rain over the 83K acres that the Smith River Complex fire encompasses equates to roughly 1,150,769,228 gallons of water over the area PER event.

Medical Incident Report

FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A MEDICAL EMERGENCY: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use the following items to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS / DISPATCH (**Verify correct frequency prior to starting report**)

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: *Provide incident summary (including number of patients) and command structure.*

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>
