Fire Weather Forecast

FORECAST NO: 27

PREDICTION FOR: Wednesday-Thursday

DATE: September 13th, 2023

FORECAST ISSUED: 1900 September 12th, 2023

FIRE: Smith River Complex South UNIT: CA-SRF-968

IMET: tom.lonka@noaa.gov (240-205-9007)

SIGNED: Tom Lonka

Elevated Fire Weather Conditions through Friday

* Valley elevations = 400-1200ft (Gasquet), Ridgetop elevations = 3500 ft (Camp Six) * WEATHER DISCUSSION: A period of hot and dry weather will begin today. Minimum relative humidities will trend downwards compared to Tuesday with sunny skies as a ridge of high pressure builds. Northeast winds increase to around 20-24 mph in the afternoon. Poor RH recoveries are expected tonight in the higher terrain with readings in the 20s to near 30 percentile expected. In the low elevations and valleys, expect recoveries of 50-70%. Thursday will be the hottest and driest day of the week with most areas reaching or exceeding 90 F in the low elevations, along with minimum RH values nearing 20% during the afternoon.

TODAY:

WEATHER:

Areas of morning smoke, becoming sunny.

Today's General Fire Behavior:

Forecasted NE winds may increase fire behavior in isolated areas unaffected during the past few operational periods. Expect a heating and drying trend over the next few shifts. Watch for alignment of wind, slope and receptive fuels. Shaded and unshaded fuels will support fire spread, specifically in the eastern divisions of Branch XX. Poor overnight recoveries may extend the burn period and increase fire activity over the next few shifts.

Specifics:

Branch V: Fuels will continue to dry and become available. Potential for fire activity to transition from minimal to moderate. NE winds may funnel down Stoney Creek, likely escalation in spotting and roll-out. Down and dead heavies will continue to smolder and creep. Expect flare-ups and marginal growth in open line.

Branch XX: Firing operations on ridgetops, especially, the windward side of East/West orientated ridgetops will be unfavorable due to NE winds. Surface fuels will support backing, flanking, and single tree torching in the upper elevations of Branch XX with good ventilation. Short burn windows (2-4 hours) will be likely in the afternoon in Divisions MM, PP, VV, and YY. The marine influence is persisting in the lower elevations of Divisions VV, and YY with good overnight humidity recovery and will moderate early evening fire activity in these divisions.

Night Shift: Fire activity may continue into the evening hours based on day operation's environmental factors and fire behavior. Expect poor recovery above 3500ft. NE to East winds will persist into the early morning hours.

Initial Attack: Warm and dry conditions continue. New starts in the area outside of marine influence will likely have minimal to moderate fire behavior with backing, flanking, and single tree torching.

Aviation Safety/Watch out:

Are you providing feedback to the pilot about drop accuracy? Be honest and constructive.

Safety Message/ Watch Out Situations:

Fires tend to give you warning that they are about to get up and move! Watch for these thresholds: Temperatures at 90+ degrees, humidity below 20%, and winds more than 20 m.p.h. HEED these thresholds and COMMUNICATE them to those around you.

Work Assignments:

Improve primary lines along the 17N40 road from DP93 to the Craigs Creek drainage as well as 17N07 road from DP85 to the Craigs Creek drainage.

Prepare for strategic firing operations if necessessary.

7. Special Instructions:

**HEQB Bowman (O-723) and Gordon (O-721) to assist with vehicle recovery.

Be aware of retardant avoidance areas, mine shafts and naturally occuring asbestos.

Maintain awareness of fire conditions affecting road systems in your area that might be a primary escape route and establish secondary egress to safe area.

Esure trigger points are established and re-evaluated thoughout the shift.

All contingency dozer lines must be approved by Operations.

SOF2 Romero will be working in Divisions VV and YY

REAFs will check in and out with DIVS.

Smith River Complex South - Safety Message

INCIDENT #CA-SRF-000968

DATE: 09-13/14-23 TIME: 0700-0700 Day/Night Shift

Incident Management Team Transition

- Sometimes called the 19th Watch Out Situation
- Take the time to understand the plan. Ensure all resources completely understand the assignment, Communications, and Medical Plans.
- Supervisory positions have changed. Know who you are working for.
- Briefings are required every shift for all personnel, for new assignments, and for changing conditions.

Any Firefighter knows how Every firefighter should know why

Make a Safety Difference

- As a supervisor, provide constant and relentless oversight.
- Stay focused on the task at hand all the time!
- Come up with a safer way to perform a risky assignment.
- Discuss situations that might cause a near miss.
- Never tolerate "Hey, watch this!"
- Discuss the effects of fatigue and how to mitigate the effects of fatigue.
- While in the fire zone, wear your hard hat when you leave the vehicle. Have a purpose in what you do.

Ensure....

- Strategic and tactical decisions take into account extended duration firefighting efforts with massive destruction.
- Tactical decisions keep pace with the evolving fire conditions and behavior.
- Firefighting operations are coordinated with adjacent branches, divisions, and groups.
- Specific firefighting tasks are consistent with the strategy and tactics to control the incident.
- We avoid the arrogance of success or, think what we did yesterday will be sufficient for tomorrow.

ICS (215A) DAY/NIGHT SHIFT

BR/DV	HAZARDOUS ACTIONS – CONDITIONS	MITIGATIONS – WARNINGS – REMEDIES
ALL	TRAFFIC HAZARDS AND DRIVING	 Take extra precautions when entering or exiting the roadways. Maintain high visibility in the operational area and use warning lights when working on roads or traveling in smoke. Many roads are narrow and mid-slope, with soft shoulders. Allow heavy vehicle to pass on the uphill side. Use spotters when backing or turning around. Use warning lights when working on roads or traveling in smoke. Be alert for wildlife. Dusk to dawn poses the greatest potential for accidents. Be aware of and take precautions around logging truck traffic.
ALL	STEEP TERRAIN & ROLLING DEBRIS	 Maintain 8'-10' spacing when working & walking. Do not work above any personnel. Evaluate the necessity to send personnel into areas with limited access.
ALL	HAZARD / DANGER TREES	 Follow Hazard Tree Safety Guidelines (IRPG p.20) Limit the number of personnel around snags and their exposure time. Fallers must be qualified for the trees being felled. Be alert around hazard trees during wind events, even green trees. The hazard zone extends a minimum of 2½ tree lengths. Avoid parking vehicles or taking breaks under or near hazard trees.
ALL	DIRECT/ INDIRECT FIRELINE CONSTRUCTION	 Establish and maintain LCES. Utilize favorable locations when constructing control features; i.e. lighter fuels, natural or existing barriers, and ridgelines. Watch out if there is unburned fuel between you and the fire. Monitor weather conditions and fire behavior.
ALL	HEAVY EQUIPMENT OPERATIONS	 Ensure communications are established with operators. Use hand signals if other communications are unavailable. Maintain a 50'-100' exclusion area around equipment. Use road guards as needed to control traffic.
ALL	FIRING OPERATIONS AND DEVICES	 Follow the chain of command when undertaking burning operations. Ensure that the aerial/ground ignition plans have been well briefed, including LCES and drought-related fire behavior considerations. Wear and use appropriate PPE. Request spot weather forecasts before burning. Initiate burning after ensuring the plan is authorized and understood by all.
ALL	PUBLIC SAFETY	 Have a purpose for where you drive and what you do. During high fire activity, do not expect drivers to pull over or drive through the area slower. Maintain high visibility in the operational area and use warning lights when working on roads or traveling in smoke. Be aware of the public entering the fire area to access social trails and campin sites.
ALL	AVIATION OPERATIONS	 Conduct thorough mission assessments before starting work. Follow the guidelines in the SHO and other aviation guidelines and reference materials. Ensure coordination and communication are in place and understood by all resources involved in the mission. Ensure close coordination between Air Attack, air tankers, helicopters, and ground resources.
ALL	COMMUNICATIONS	 Share your Situational Awareness (hazards, changes, etc.) with those who als have a need. Answer questions and/or ask for intel when you do not know the plan. Ensure all personnel are familiar with the incident and IA communications plan
ALL	WILDLIFE	 High concentration of wildlife in the area. Watch out for large game animals crossing the roads. Deer are more active at dusk and dawn. If you see one animal, anticipate others. Drive with caution.
ALL	WEATHER	 Maintain continuous Situational Awareness based on the fire environment, observed fire behavior, hazards, and incident objectives. Take weather throughout the shift to get timely and accurate information. Is what we predicted what you are observing? Request spot weather forecasts if you notice a notable change in the weather. Communicate any weather changes with your crew and adjacent resources.
