Fire Behavior Forecast #28									
Incident: Smith River Cx North CA-SRF-000968 TYPE OF FIRE: Wildfire									
DATE/TIME ISSUED: September 16, 2023 1900 OPERATIONAL PERIOD: September 17, 2023									
FBAN: Tobin Kelley									
Weather Summary - See	Incident Weather Forecast:								

Fuels

Shrub: Shrubs and brush 1 to 3 feet high with a low load of grass intermixed with sparse conifer. Manzanita brush and other live fuels are moderately available for consumption with independent fire. These fuels will be more reactive to higher wind speeds and show greater rates-of-spread.

Timber litter and shrub: Primary carrier of the fire is understory brush with timber and leaf litter. Expect moderate spread rates in sheltered areas. Canopy closure shelters fuels from wind, making fire spread to be slow with low to moderate winds.

Fire Behavior: Moderate Atmosphere: Unstable	Fuel/Type Model	Maximum Rate of Spread	Maximum Flame Length
Max. spot distance: 0.1 mile Wild Rivers ERC%: 87 th percentile	Shrub	3-5 feet/minute	4 ft.
(down 1) BI: 89 th percentile (down 2)	Timber litter shrub	2 feet/minute	3-8 ft.

Expected Fire Behavior is Based on the Warmest, Driest, Windiest Conditions Forecasted.

General/Potential: Similar weather conditions to yesterday – as smoke lifts out fire activity will increase in reaction. Expect moderate to active fire behavior as hot and dry weather continues. Winds should be light and terrain driven with west winds along the ridges in the afternoon.

E/F: If an initial attack fire occurs expect moderate fire behavior affected by wind, slope and heavy timber with potential for short range spotting from timber stands.

Golf: Fire activity will continue to be moderate in islands of fuel. Winds should not be a factor.

Hotel: Conditions should remain favorable for this division. Smoldering and creeping in heavy fuels. Expect green islands to continue to burn out with flanking and surface fire.

Utility Group: Large unburned islands of fuel are seeing increasing activity as fuels continue to dry. Steep slopes are conducive to short uphill runs when alignment occurs.

India: Smoldering and creeping with continued hot and dry weather. Potential remains for unburned islands of fuel to carry fire.

Kilo: Expect creeping and smoldering fire in unburned fuels as hot and dry weather continues over the division.

Night Operations: Expect minimal to moderate fire activity along control lines. Relative humidity late in the night should be high enough to minimize fire activity. Winds should be light overnight.

Air Operations:

Visibility may allow aviation operations earlier in the day today.

Safety:

Lighter grass, shrub and forest litter fuels may exhibit rapid spread rates if fuels, slope and wind align. If on Initial Attack, assess conditions regarding fuels, weather and topography as spread rates and flame lengths may be higher than seen on this fire over the last week.

Incident

Operation Period: 09/17/23 Day Shift

SAFETY MESSAGE

YOUR SAFETY IS DEPENDENT UPON YOUR ABILITY TO:

- FORECAST the future and how it will affect your safety.
- <u>PREDICT</u> fire behavior, and how the weather and terrain will influence it.
- ANTICIPATE problems and needs, finding solutions in advance.
- **RECOGNIZE** hazards and minimize risk exposure.

Please try and operate in a proactive mode, not a reactionary mode!

MAJOR HAZARDS AND RISKS

STEEP TERRAIN	ROLLING MATERIAL	HEAVY EQUIPMENT
FATIGUE	DEHYDRATION	HAZARD TREES
SPOT FIRES	BUCKET DROPS	POISON OAK

Be sure all elements of your safety plan are in place prior to engagement

IRPG pg. xi:

Stress reactions

Communications deteriorates or grows tense. Habitual or repetitive behavior.

Target fixation-Locking into a course of action; whether it makes sense or not; just try harder. Action tunneling – focusing on small tasks, but ignoring the big picture.

Escalation of commitment- accepting increased risk as completion of task gets near.

Take time to think through your actions.

Maintaining Social Connections

As National Suicide Prevention Week has come to an end, that doesn't mean the conversations have to stop. As we fall approaches with large unknowns on if we will go out again, or if this is it for the season, keep your teammates in mind.

Isolation and loneliness are known contributors of suicidal thoughts. When fire season ends, many wildland firefighters experience a loss of connection as their peers return home to their families and friends. This separation and disconnection may feel even worse this year because our season has been short and unpredictable.

As fire crews conclude their season, it is more important than ever to find new ways to maintain social connection. Here are some simple suggestions:

- <u>Check in!</u> Hold regularly scheduled check-ins with one other. Do it just for fun, with no "work" agendas. Sometimes texting isn't enough. Use a video platform, because better connections are made when you can see the face of the person.
- Meet up! If it is safe to do so, meet in person.
- <u>Be there!</u> Try to be available to help each other out when applying for jobs, finding good deals on lift tickets, or when someone is feeling down.

<u>Smith River Complex North - Field Maps Workflow</u>

As suppression repair is begun on some portions of the fire, it is important to use Field Maps correctly so repair work can progress! A common question is: *Who can change the Repair Status in Field Maps?*

<u>REPAIR STATUS</u>: Operations is responsible for changing the status from "In Use – Fire Management" to either "Needs Assessment" or "Repair Needed". In consultation with the READs, the status can then be updated as work proceeds. READs are the <u>only</u> group that can change the status to "Completed – Inspected" or "No Repair Needed".

Operations

- In Use Fire Management
- Needs Assessment
- Repair Needed
- In Progress
- Completed Ready for Inspection

Resource Advisors

- Completed Inspected
- No Repair Needed
- Other See Comments

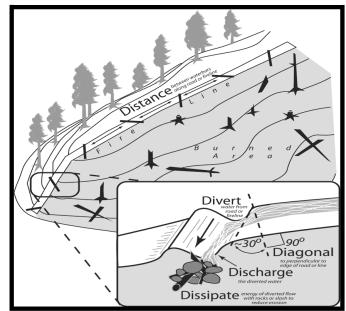

<u>ARCH CLEARANCE:</u> Archaeologists (ARCHs) or cultural advisors are the only ones who can clear lines for repairs and change the "ARCH Clearance" status.

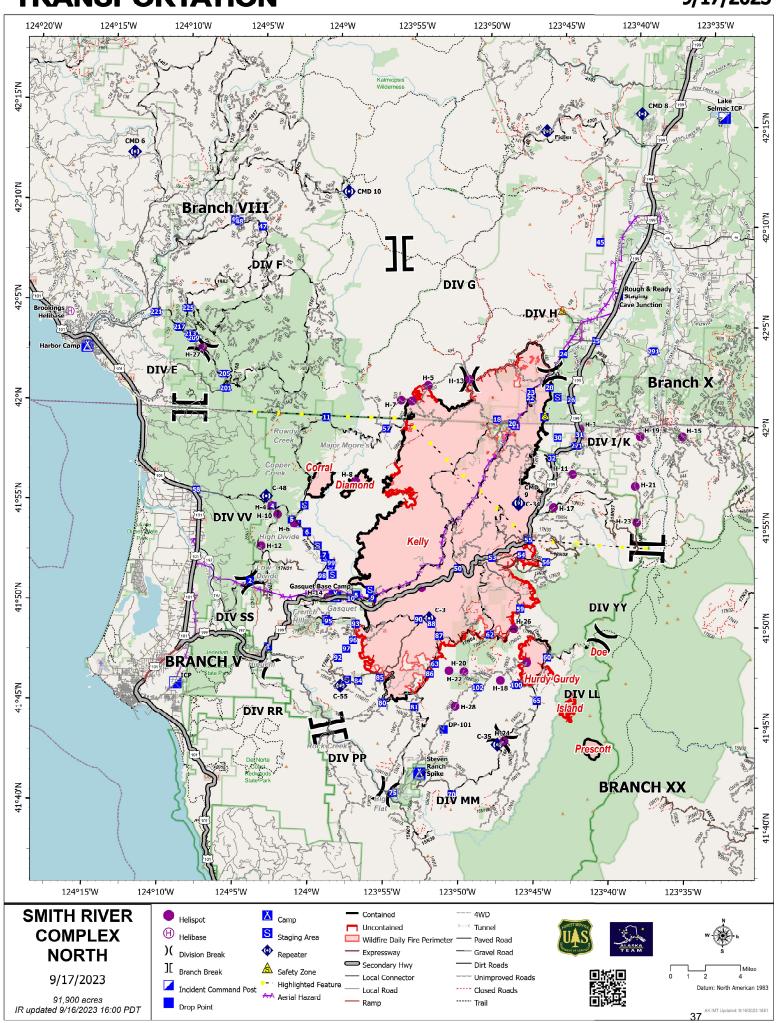

Constructing Waterbars

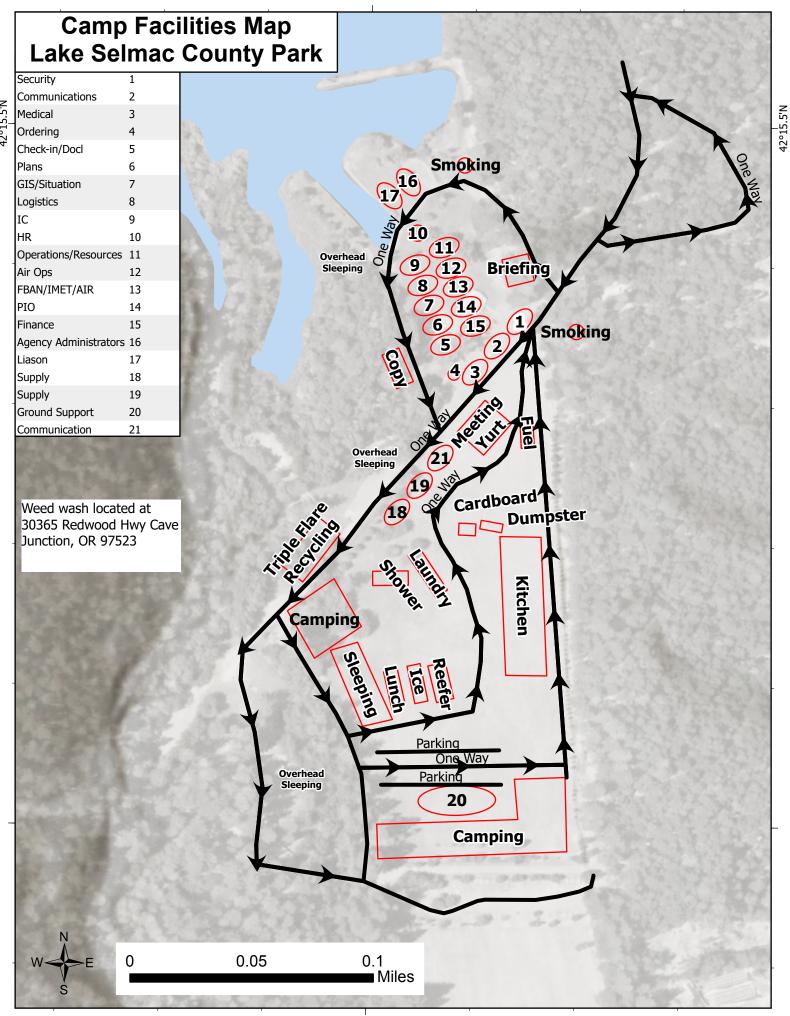

Constructing EFFECTIVE waterbars on firelines includes attention to following the 5-D's: Distance, Divert, Diagonal, Discharge, and Dissipate. The purpose of waterbars is to slow water down as it travels downhill. When constructed correctly, waterbars help reduce excessive erosion and mitigate sediment transfer to streams and rivers.

Fireline Slope	Maximum Spacing
1-6%	300 ft.
7-9%	200 ft.
10-14%	150 ft.
15-20%	90 ft.
21-40%	50 ft.
41-60+%	25 ft.
