Fire Weather Forecast

FORECAST NO: 33

PREDICTION FOR: Tuesday-Wednesday

DATE: September 19th, 2023

FORECAST ISSUED: 1900 September 18th, 2023

FIRE: Smith River Complex South

UNIT: CA-SRF-968

IMET: tom.lonka@noaa.gov (240-205-9007)

SIGNED: Tom Lonka

* Valley elevations = 400-1200ft (Gasquet), Ridgetop elevations = 3500 ft (Camp Six) * WEATHER DISCUSSION: A dry cold front moves through today. Some morning marine layer clouds will give way to sun in the afternoon, along with drastically lowering RH values and gusting north to northeast winds. Poor RH recoveries are expected tonight as gusty north to northeast winds persist. Wednesday will see some modest improvement in RH values, but winds will be quite gusty, 20 to 30 mph, with the highest winds on ridgetops. The many microclimates will produce varying wind speeds and directions in drainages and valleys today through Wednesday.

TODAY:

WEATHER: Morning clouds and smoke give way to sun and breezy afternoon conditions.

MAX TEMP: Valleys:

Today's General Fire Behavior:

Forecasted warmer and dryer conditions with an escalation in winds (N-NE 20+) will increase the probability of ignition and spotting potential. Clear air will equate to active fire behavior. Expect smoldering, creeping, backing and potential up slope movement with alignment. Micro-climates and thermal belts can have immediate and sustained fire behavior impacts in your work location. Areas of concern, DIV RR, SS and LL (West facing flanks). This is the last forecasted operational period with a significant marine intrusion into drainages.

Specifics:

Branch V

Division SS/VV: Moderate fire behavior, interior smoldering and creeping. Backing fire off the 40 Charlie Rd. NE winds could increase fire behavior. Firing operations will be challenging due to forecasted winds. Potential spotting and slope reversal, slow ROS.

Division RR: Moderate fire behavior, interior smoldering and creeping, backing fire into Craigs Creek. Potential for roll-out, spotting and slope reversal. Slow ROS.

Branch XX

Division YY: Minimal fire behavior, interior smoldering and creeping.

Division LL: Moderate fire behavior, interior smoldering, creeping and backing. Plausible increase in fire behavior due to wind on the Hurdy Gurdy on the NW and W flanks.

Division MM: No fire behavior expected.

Division PP: Minimal fire behavior, interior smoldering, creeping. NE wind will aid in reinforcing control lines.

Night Shift: Fire activity may continue into the evening hours based on day operation's environmental factors and fire behavior. Expect Poor to fair overnight recoveries above 3500ft. NE winds will continue into the evening hours. Shallow inversion (1000') will set in at approx. 2300.

Initial Attack: The fire environment will transition to a warmer and drier profile. Expect new starts to be somewhat resistant to suppression efforts due to increase winds and fuel receptibility. Potential for ROS and spotting with slope alignment.

Aviation Safety/Watch out:

Should the operation or the flight be stopped due to a change in environmental conditions, weather, visibility, terrain, elevation or temperatures?

Safety Message/ Watch Out Situations:

While the cooler, nighttime period is generally a more effective time to gain control of wildfires, the increased risk from unseen falling snags and weakened live trees may limit the widespread use of crews at night in areas of fire weakened or dead and dying timber.

Smith River Complex South - Safety Message

INCIDENT #CA-SRF-000968

DATE: 09-19/20-23 TIME: 0700-0700 Day/Night Shift

Building Positive Work Culture

- Establish daily individual goals to assist organizational success.
- Foster positive work relationships with all members of the organization.
- Be a proactive listener. Hear what discussions other workers are having.
- Care for the well-being of all employees.
- Be flexible and transparent.

PREPARE FOR A MEDICAL EMERGENCY

Practice reporting the 8-Line Medical Protocol with all crew members. An emergency shouldn't be the first time that the process is reviewed. Know where the closest medical staff is located. Pre plan travel routes and utilize drop points as rendezvous locations if needed. Have a plan in case aircraft are unavailable. Know who else is medically trained within assigned resources.

Look Up, Look Down, Look Around

- Look Up: Check the sky for any weather changes such as building or approaching thunderstorms, wind shifts or increases in speed. Watch for air operations and water drops. Look for snags.
- Look Down: Watch your footing. Keep an eye out for snakes, bees nests and observe fine fuels on the ground.
- Look Around: Check fuel loading in the area, general terrain, current fire behavior and ladder fuels. Keep an eye on fellow firefighters for signs of heat stress and smoke inhalation.

Safety is No Accident!

- Situational Awareness: gathering information about your surroundings.
- · Hazard Assessment: identify the tactical hazard.
- Hazard Control: develop mitigations to reduce or eliminate risk.
- Decision Point: are mitigations in place and timely?
- Evaluate: What is changing? Are strategy and tactics working? Is fatigue becoming a bigger factor?

ICS (215A) DAY SHIFT

	TOTAL	103 (213A) DAT 31111
BR/DV	HAZARDOUS ACTIONS – CONDITIONS	MITIGATIONS – WARNINGS – REMEDIES
ALL	STEEP TERRAIN & ROLLING DEBRIS	 Maintain 8'-10' spacing when working & walking. Do not work above any personnel. Evaluate the necessity to send personnel into areas with limited access.
ALL	INDIRECT LINE CONSTRUCTION	 Establish and maintain LCES Utilize favorable locations when constructing control features, i.e. lighter fuels, natural or existing barriers, and ridgelines. Watch out as there is unburned fuel between you and the fire.
ALL	HAZARD / DANGER TREES	 Follow Hazard Tree Safety Guidelines (IRPG p.22.) Limit the number of personnel around snags and their exposure time. Fallers mustbe qualified for the trees being felled. Be alert around hazard trees during wind events, even green trees. The hazard zone extends a minimum of 2½ tree lengths. Avoid parking vehicles or taking breaks under or near hazard trees.
ALL	TRAFFIC HAZARDS AND DRIVING	 Take extra precautions when entering or exiting the roadways. Maintain high visibility when in the operational area, and use warning lights when working on roads or traveling in smoke. Many roads are narrow and mid-slope, with soft shoulders. Allow heavy vehicles to pass on the uphill side. Use spotters when backing or turning around. Keep your speed down in all areas. Drive at or below posted speed limits. Use warning lights when working on roads or traveling in smoke. Use chock blocks and turn wheels into hills. Be alert for wildlife. Dusk to Dawn poses the greatest potential for accidents.
ALL	MOP-UP	 Balance the risk of exposure to hazards against the mop-up objective Evaluate areas for hazard trees and locate stump holes for avoidance. Monitor fatigue; shorten shifts to increase rest where appropriate. Review and follow "Look Up, Look Down, Look Around" procedures. Evaluate mop-up distances against what is safe and necessary.
ALL	HEAVY EQUIPMENT OPERATIONS	 Ensure communications are established with operators. Use hand signals if other communications are unavailable. Maintain a 50'-100' exclusion area around equipment. Use road guards as needed to control traffic.
ALL	STRATEGIC/TACTICAL FIRING	 Follow the chain of command when undertaking burning operations. Ensure that aerial/ground ignition plans have been well briefed, including LCES and drought-related fire behavior considerations. Wear and use appropriate PPE. Initiate burning after ensuring the plan is authorized and understood by all.
ALL	NIGHT OPERATIONS	 Have a purpose for where you drive and what you do. Use caution where you park or stage, especially in steep timbered areas. Use available time for briefings on roads, terrain, and potential rolling material, especially if the resources are new to the area. Use glow sticks to mark hazards, and ensure personnel have headlamps.
ALL	AIR OPERATIONS	 Follow "Aviation Watch-Out Situations" on page 46, IRPG. Do not plan on air resources for tactical support or medical transportation. Refer to page 58, IRPG, for directing bucket drops. Ensure positive communication with air resources
ALL	FIRE BEHAVIOR	 Are you seeing what we have predicted? Conduct thorough assessments before starting work. Ensure LCES is in place. Plan & communicate your exit strategy with your crew and adjacent resources. Provide additional briefing for new resources and maintain communications
ALL	WEATHER	Maintain continuous Situational Awareness based on the fire environment, observed fire behavior, hazards, and incident objectives. Take weather throughout the shift to get timely and accurate information. Is what we predicted what you are observing? Request spot weather forecasts if you notice a notable change in the weather. Communicate any changes in weather with your crew and adjacent resources

PUBLIC INFORMATION

Direct any public or media inquiries to the Information Center at: **707-383-9727** (staffed from 0800-2000) or <u>2023.SmithRiverComplex@firenet.gov</u>. Please email/text your photos to help tell the story of the fires.

Remember we are all an Information Officer - helpful tips in your IRPG page 101:

JOKE THE WEEK:

Why don't pirates take a shower before they walk the plank?

They just wash up on shore.

IMPORTANT: <u>Yellow/White Striped flagging 'Equipment Exclusion'</u> indicates resource <u>AVOIDANCE</u> areas.

Port Orford Cedar root disease

Some local drainages are infected with a root disease that spreads via mud and water. To prevent spreading this disease to uninfected areas, all water tenders and engines will apply bleach to their tanks in a 1:1000 ratio (using bleach with 6.0 % Sodium hypochlorite).

Fish Screens: Coho Salmon Critical Habitat

Most rivers and streams in this area are considered critical habitat for Threatened Coho salmon. Please ensure that Mark 3 and Engine/Tender suction hoses have the appropriate screen attached. Talk to a READ if you think you need a screen!

WEED WASH:

The area in and around the Smith River Complex, are home to many sensitive species. Infestations of highly invasive plant species are one of the largest threats to sensitive species populations here. Spread via vehicles and foot traffic as well as re-activation via fire is of high concern. To help protect these sensitive places, do not park in and try to avoid areas flagged areas. Make sure to visit the WEED WASH at either Gasquet Base Camp OR Elk Valley ICP for demob and additionally if needed, as directed by the READs. Located on Elk Valley Rd Camp.
