**WEATHER DISCUSSION:** \* Valley elevations = 400-1200ft (Gasquet), Ridgetop elevations = 3500 ft (Camp Six) \*  
 Poor RH recoveries are expected tonight in the higher elevations as gusty north to northeast winds persist. Dry conditions and the gusty winds will continue through Thursday, with late this afternoon into this evening seeing the strongest winds. Some modest improvement in minimum humidity values are expected today. Fair to good recoveries are expected tonight in the lower elevations, though a dry layer will remain along higher slopes and ridges with fair to poor recoveries. The many microclimates will produce varying wind speeds and directions in drainages and valleys today through Thursday.

## Fire Behavior Forecast #34

<b>Name of Incidents:</b> Smith River Complex – South	<b>Administrative Unit:</b> Six Rivers NF – Gasquet District
<b>Date &amp; Time Issued:</b> 19 September 2023 - 2000	<b>Operational Period:</b> Sep 20 – Sep 21 (0700-0700)
<b>Weather Summary:</b> Gusty Northeast winds and dry through Thursday	<b>FBAN:</b> 530-412-2333- cell Linda Ferguson FBAN trainee

### Fire Behavior Summary

General –	FUEL MODEL	Back [ROS]	Head	Back [FL]	Head
Max. spot dist.: 64 ch. or (0.8 mile) Prob. Ignition: 59% - shaded 64% - unshaded LAL: 1 CWR (0.10") 0%	GS2: Burn scars with moderate dead/down, grass, manzanita brush	1.4 ch/hr	70 - 90 ch/hr	6" – 1.4'	7' - 9'
	TU5: Very high load mixed conifer and shrubs – heavy forest litter, deep duff, heavy dead/down fuels	0.4 ch/hr	20 - 25 ch/hr	1' – 2'	9' – 11'
	TL3/8: Long-needle pine litter, Gambel oak and sparse grass	0.1 ch/hr	1 - 3 ch/hr	< 6"	1' – 2'

**Today's General Fire Behavior:**  
 Drier, windy conditions have increased fire activity and lengthened burn windows. Fire behavior is expected to increase throughout the day on exposed, unsheltered slopes with moderate ROS, higher flame lengths, and isolated torching. Creeping, backing, and smoldering is projected to continue in sheltered, shaded areas such as drainages, with slow ROS and lower flame lengths.

**Specifics:**

**Branch V:**  
**Division VV:** Minimal fire behavior, interior smoldering all the way to the zone break to the (North).  
**Division SS:** Moderate fire behavior, interior smoldering, and creeping, backing fire adjacent to DP96 (40 Charlie Road) potential slope reversal, slow ROS.  
**Division RR:** Moderate fire behavior, interior smoldering and creeping, backing fire into Craigs Creek, potential slope reversal, slow ROS.

**Branch XX:**  
**Division YY:** Moderate fire behavior, interior smoldering, creeping, and backing fire near Washington Peak and between DP 55/DP56. Backing fire in Siskiyou fork, slow ROS.  
**Division LL:** Moderate fire behavior, interior smoldering, creeping, and backing fire off Bear Basin Rd. and into Hurdy Gurdy Creek. If fire becomes established on Tributary Hurdy Gurdy Butte and gets in alignment with wind on south facing slopes expect a faster ROS and higher flames lengths.  
**Division MM:** No Fire behavior expected.  
**Division PP:** Minimal fire behavior, interior smoldering, and creeping.

**Night Shift:** Fire behavior is likely to increase due to predicted high winds and drier conditions from what was observed over the past week. Creeping, backing, and possibly some isolated single tree torching along ridges and down the lee side of ridges is expected. On steeper topography, the fastest spread method for fire will continue to be rollout.

**Initial Attack:** If new starts occur, use the above matrix to estimate fire behavior based on the dominant fuel type. New starts may exhibit moderate rates of spread and higher flame lengths if fire becomes established on exposed, unsheltered slopes where sun and wind can preheat and dry out fuel moistures.

### Aviation Safety/Watchout

Bucket drops can carry thousands of pounds of water that can injure personnel, damage vehicles and equipment. Before receiving a water drop, ensure the drop area is clear of all personnel and equipment.

### Safety Message/Watchout Situations

Isolated flare-ups are possible in areas that have not shown activity for a couple days. Snags may fall into fresh fuel.

# Smith River Complex South – Safety Message

INCIDENT #CA-SRF-000968

DATE: 09-20/21-23 TIME: 0700-0700 Day/Night Shift

## OPERATIONAL TEMPO

Maintaining operational tempo is not solely about speeding up to match or exceed the pace of the environment. It is also about knowing when operations should slow down and why.

We are most vulnerable to accidents and errors when operational tempo changes, especially when it changes quickly. Maintaining good situation awareness despite change in operational tempo represents a considerable challenge. The key to managing operational tempo successfully is monitoring the changing environment and capabilities of the team, and then applying good judgment to determine whether to push forward or pull back while making necessary adjustments.

## Working with Heavy Equipment

- Don't approach until you have eye contact with the operator and all implements have been lowered.
- Avoid working downhill from equipment.
- Communicate all hazards to the operator.
- During night shift or low visibility, use a headlamp or glow sticks so the operator can see you.
- Equipment operators can have a difficult time see you ground personnel; take responsibility for your safety and all of those around you.

## Driving

- When driving, keep the speed at or below the posted speed limit and turn your headlights on. Is the posted speed limit a safe speed under current conditions and traffic?
- Use caution on unimproved roads as some have soft shoulders. Some roads are also only one lane with pullouts.
- Road surfaces are variable with washboard conditions and thick dust that can compromise turning and braking.
- Watch for and anticipate stock and wildlife especially at dusk and dawn.
- Always fasten your seatbelt before the vehicle is set into motion. Use backrests.
- Don't tailgate, especially in dusty conditions.

## Hazard Tree Indicators

- Tree burning for any period of time.
- High risk tree species (rotten and shallow roots).
- Numerous downed trees in the area.
- Dead, broken, or burning tops and limbs overhead
- Accumulation of needles, bark, or limbs.
- Leaning or hung-up trees.

Eliminate the hazards with qualified sawyers and modify suppression tactics or fireline location to avoid high risk areas. Always provide timely feedback to others regarding any hazard trees.

# Human Resources Message Smith River Complex September 20, 2023

## HEARSTRINGS TO HOME

I want to make you all aware I have another option for you to communicate with those waiting on you to return home. The Wildland Firefighter Foundation has a campaign called "HEARTSTRINGS TO HOME" and have provided postcards so you may stay connected with family and friends giving them something tangible they can hold in their hands sent by you. It's a nice way to bring a smile to the face of someone you miss and who is waiting on your return.

Pick up a postcard from Human Resources and write your message remembering to address it complete with zip code and drop it back off with Human Resources. I'll apply the postage and drop it in the outgoing mail.

Our hope is that this will help you to connect with those waiting at home and it lets them know you are missing and thinking of them too.

## Smith River Complex Incident: Resource Advisor Message

**IMPORTANT:** Yellow/White Striped flagging 'Equipment Exclusion' indicates resource **AVOIDANCE** areas.

### Port Orford Cedar root disease

Some local drainages are infected with a root disease that spreads via mud and water. To prevent spreading this disease to uninfected areas, all water tenders and engines will apply bleach to their tanks in a 1:1000 ratio (using bleach with 6.0 % Sodium hypochlorite).

#### \*Designated Draft Site Location by Division (setup with Bleach and fish screen)

- DP 50 - Div MM
- Panther Flat Day Use - Gasquet Structure Grp, Div A
- DP 10 (Gasquet Ranger District) - ALL Divs
- Rowdy Creek - Div B/D
- DP85 (Coon Creek) - Div YY
- Steven's Bridge & Hurdygurdy Bridge - Div VV, SS

### Fish Screens: Coho Salmon Critical Habitat

Most rivers and streams in this area are considered critical habitat for Threatened Coho salmon. Please ensure that Mark 3 and Engine/Tender suction hoses have the appropriate screen attached. Talk to a READ if you think you need a screen!

### WEED WASH:

The area in and around the Smith River Complex, are home to many sensitive species. Infestations of highly invasive plant species are one of the largest threats to sensitive species populations here. Spread via vehicles and foot traffic as well as re-activation via fire is of high concern. To help protect these sensitive places, do not park in and try to avoid areas flagged areas. **Make sure to visit the WEED WASH at either Gasquet Base Camp OR Elk Valley ICP for demob and additionally if needed, as directed by the READs.** Located on Elk Valley Rd Camp.
