Fire Behavior Forecast #32

Incident: Smith River Cx North CA-SRF-000968	TYPE OF FIRE: Wildfire
DATE/TIME ISSUED: September 20, 2023 1900	OPERATIONAL PERIOD: Sept. 21, 2023 0700-1800
FBAN: Scott MacDonald (541)-993-3444	Signed: <i>Wm. Scott MacDonald</i>

Weather Summary - See Incident Weather Forecast:

Fuels

Shrub: Shrubs and brush 1 to 3 feet high with a very low load of grass intermixed with sparse conifer. Manzanita brush and other live fuels are moderately available for consumption with independent fire. These fuels will be more reactive to higher wind speeds and show greater rates-of-spread in exposed areas (ridges)

Timber litter and shrub: Primary carrier of the fire is understory brush with timber and leaf litter. Expect moderate spread rates in sheltered areas. Canopy closure shelters fuels from wind, making fire spread to be slow with low to moderate winds.

Grass/light fuels: Primary carrier of the fire is open grass areas with light shrub and mixed timber at lower elevations (valley bottoms in IA response area. Grasses are fully cured with seasonal drying, and will be reactive to higher winds

	Fuel/Type Model	Maximum Rate of Spread	Maximum Flame Length
Fire Behavior: Moderate Max. spot distance: 0.1 mile Wild Rivers ERC%: 82 nd percentile BI%: 87 th percentile POI is 40 to 55 percent	Shrub	1 - 4 Ch./hr.	1 - 3 ft.
	Timber litter shrub	2 - 9 Ch./Hr.	1 - 4 ft.
	Grass (lower elevations)	10 - 40 Ch./hr.	2 - 7 ft.

Expected Fire Behavior is Based on the Warmest, Driest, Windiest Conditions Forecasted assuming wind/slope/fuels are aligned

General/Potential: Mostly clear skies; lower temps will continue to moderate fire activity, along with slightly lower winds on ridges/exposed areas, Moderate ROS potential with any alignment of slope/wind (see table above). POI down a bit with higher RH for today.

Div. E/F: If an initial attack fire occurs expect moderate fire behavior affected by wind, slope and heavy timber with potential for short range (less than .1 miles) spotting from timber stands.

Div. G/H: Fire activity will continue to be low to moderate in islands of fuel. NE winds still in play and bit lower than yesterday; limited alignment with drainage and the terrain, so ROS/FL less than predicted; smoldering creeping, heavies consuming. Expect green islands to continue to burn with backing/flanking behavior, and the potential for a single tree or small group torching if wind/slope/fuels align.

India/Kilo: Smoldering and creeping with continued moderate dry weather. Potential remains for unburned islands of fuel to carry fire/produce smoke.

Utility Group: The green island will continue to burn at a moderate level of fire activity, mostly backing and flanking, smoldering, and creeping. Steep slopes with wind alignment may provide for short upslope runs (higher ROS), with limited spotting distance. Continued consumption of heavy down woody and areas of Duff.

Night: General reduction in ROS/FL with lower temps. Interior heavy fuels will continue to consume.

IA Response: Potential for rapid ROS in light flashy fuels in valley bottoms, and shifting or battling winds may change direction of fire quickly.

Air Operations:

Clear air for most of the day, but higher winds may limit some operations

Safety:

Know what your fire is Doing at all times! With interior areas consuming, the risk for fire weakened trees to fall increases, as well as ash pits may deepen. Watch for overhead as well as below surface risks.

Smith River Complex North – Field Maps Workflow

As suppression repair is begun on some portions of the fire, it is important to use Field Maps correctly so repair work can progress! A common question is: *Who can change the Repair Status in Field Maps?*

REPAIR STATUS: Operations is responsible for changing the status from “In Use – Fire Management” to either “Needs Assessment” or “Repair Needed”. In consultation with the READs, the status can then be updated as work proceeds. READs are the only group that can change the status to “Completed – Inspected” or “No Repair Needed”.

Operations

- In Use - Fire Management
- Needs Assessment
- Repair Needed
- In Progress
- Completed - Ready for Inspection

Resource Advisors

- Completed - Inspected
- No Repair Needed
- Other - See Comments

ARCH CLEARANCE: Archaeologists (ARCHs) or cultural advisors are the only ones who can clear lines for repairs and change the “ARCH Clearance” status.

Constructing Waterbars

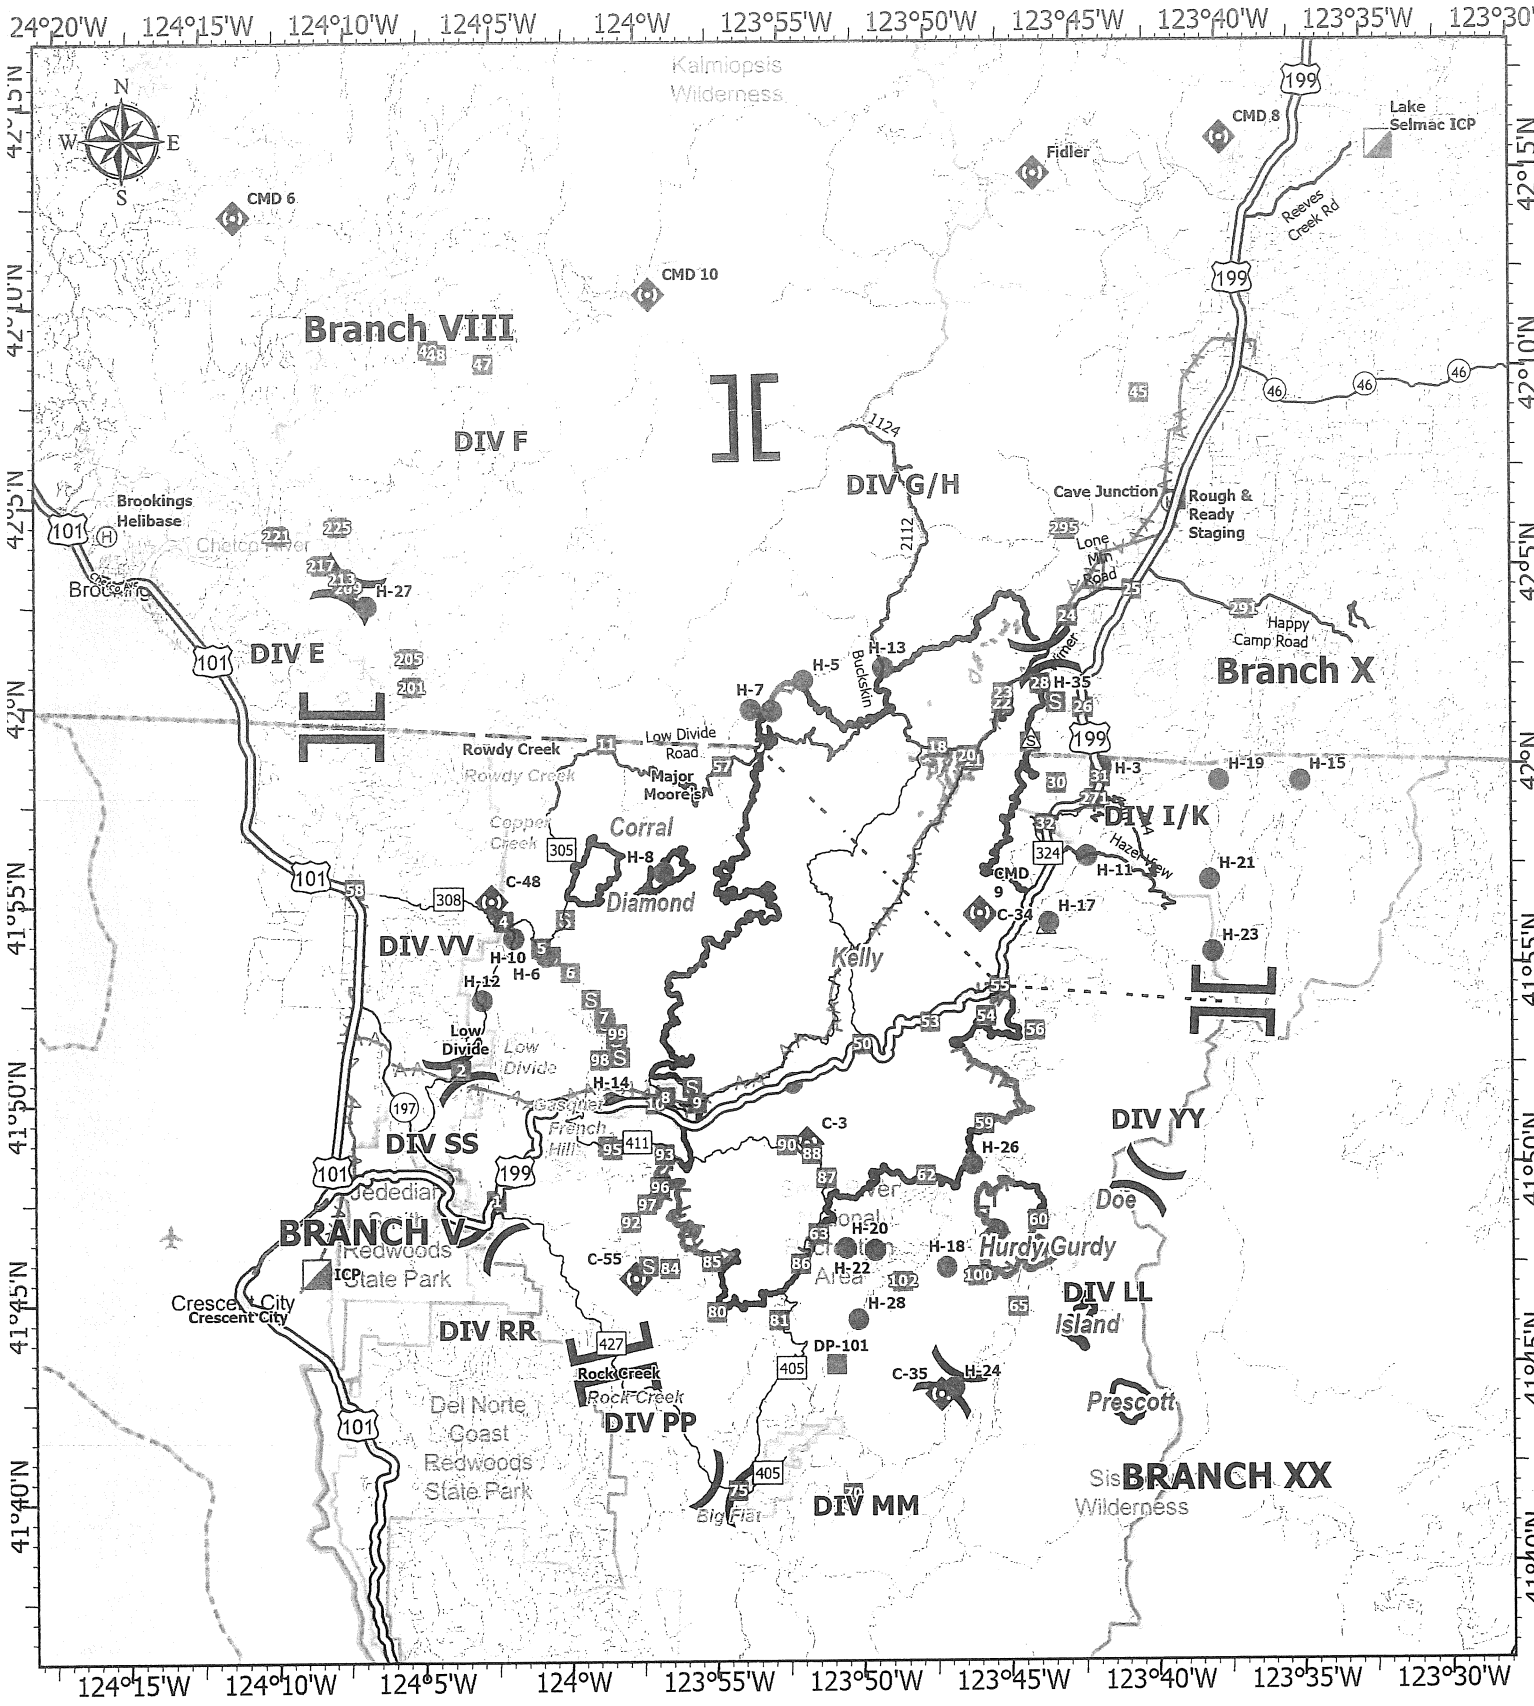

Constructing EFFECTIVE waterbars on firelines includes attention to following the 5-D’s: Distance, Divert, Diagonal, Discharge, and Dissipate. The purpose of waterbars is to slow water down as it travels downhill. When constructed correctly, waterbars help reduce excessive erosion and mitigate sediment transfer to streams and rivers.

<i>Fireline Slope</i>	<i>Maximum Spacing</i>
1-6%	300 ft.
7-9%	200 ft.
10-14%	150 ft.
15-20%	90 ft.
21-40%	50 ft.
41-60+%	25 ft.
