Fire Behavior Forecast #36

Name of Incidents: Smith River Complex – South	Administrative Unit: Six Rivers NF – Gasquet District
Date & Time Issued: 21 September 2023 - 2000	Operational Period: Sep 22 – Sep 23 (0700-0700)
Weather Summary: Seasonably cool temperatures and moderating relative humidities.	FBAN: 530-412-2333- cell Linda Ferguson FBAN trainee

Fire Behavior Summary

General –	FUEL MODEL	Back [ROS]	Head	Back [FL]	Head
Max. spot dist.: 24 ch. or (0.3 mile) Prob. Ignition: 52% - shaded 56% - unshaded LAL: 1 CWR (0.10") 0%	GS2: Burn scars with moderate dead/down, grass, manzanita brush	1.3 ch/hr	15 - 26 ch/hr	< 1.4'	< 5'
	TU5: Very high load mixed conifer and shrubs – heavy forest litter, deep duff, heavy dead/down fuels	0.5 ch/hr	5 - 10 ch/hr	< 2'	< 7'
	TL3/8: Long-needle pine litter, Gambel oak and sparse grass	0.1 ch/hr	< 1 ch/hr	< 4"	< 1'

Today's General Fire Behavior:
Lighter winds and higher RH will decrease fire behavior in most areas. However, fuels are still dry on unsheltered, exposed, south facing slopes. If fire becomes established in areas where wind and slope align with dry fuels expect moderate ROS, elevated flame lengths and isolated torching. Islands of unburned fuel may flare up throughout the interior of the fire. Creeping, backing, and smoldering will continue in sheltered areas.

Specifics:

Branch V:

Division VV: Minimal fire behavior, interior smoldering all the way to the zone break to the (North). Islands of unburned fuel may flare up throughout the day.

Division SS: Moderate fire behavior, interior smoldering, creeping, backing fire adjacent to DP96 (40 Charlie Road) potential slope reversal, and flare ups, slow ROS.

Division RR: Moderate fire behavior, interior smoldering, and creeping, backing fire into Craigs Creek, potential slope reversal, and flare ups, slow ROS.

Branch XX:

Division YY: Active fire behavior, in alignment with slope and wind. Flanking and uphill fire spread up the Siskiyou Fork drainage and into the wilderness burning within the 2015 Bear fire footprint. Fire may become wind, fuel, and slope driven with winds out of the west.

Division LL: Moderate fire behavior, interior smoldering, creeping, and backing into Hurdy Gurdy Creek.

Division MM: No Fire behavior expected.

Division PP: Minimal fire behavior, interior smoldering, and creeping.

Night Shift: Fire behavior is likely to decrease due to lighter winds and moister conditions from what was observed over the past few days. Creeping, backing, and possibly some isolated single tree torching along ridges and down the lee side of ridges is expected.

Initial Attack: If new starts occur, use the above matrix to estimate fire behavior based on the dominant fuel type. New starts may exhibit moderate rates of spread and higher flame lengths if fire becomes established on exposed, unsheltered slopes where sun and wind can preheat and dry out fuel moistures.

Aviation Safety/Watchout

Bucket drops can carry thousands of pounds of water that can injure personnel, damage vehicles and equipment. Before receiving a water drop, ensure the drop area is clear of all personnel and equipment.

Safety Message/Watchout Situations

Smoldering fire behavior still carries several hazards – ash pits, stump holes, steam burns, and crud in the eyes. Ensure safe practices are followed when providing suppression repair and mopping up.

Smith River Complex South – Safety Message

INCIDENT #CA-SRF-000968

DATE: 09-22/23-23 TIME: 0700-0700 Day/Night Shift

Do Basic Things Very Well

- **Fire Behavior:** Follow the Ten Standard Fire Orders in a methodical and thorough way.
- **Hazard/Danger Trees:** Scout work areas, evaluate hazard trees, develop controls, and apply them to mitigate risk.
- **Driving to and from the Line:** Give a briefing on driving hazards prior to every trip.
- **Hydration and Fatigue:** Hydration starts PRIOR to the beginning of the shift; drink a 2:1 ratio of water to sports drinks. Monitor fatigue levels, and do not exceed the 2:1 work rest ratio.

RECOGNIZE THE SIGNS OF FATIGUE

The effects of fatigue can directly hinder our abilities to:

- Perform various tasks and maintain a positive and supportive attitude.
- Maintain situational awareness and a high degree of alertness.
- React appropriately, in a timely manner, and in fashion.
- Retain a sharp memory and recollection of information

Driving Safely with Civilian Traffic

- Maintain a safe following distance and allow space for cars to pass.
- Be diligent in using your mirrors as cars may be passing you.
- Use turnouts when available to let cars pass.
- Stay calm; we are not part of their race.
- Maintain a heightened level of awareness around blind corners.
- Watch out for park visitors who stop to take photos and block the roadway.
- **Slow down, slow down, and slow down!**

Beware of Soft Shoulders

- Many incident roads have **soft shoulders** on the downhill side.
- Wheels may sink into these areas, causing the driver to **lose control** of the vehicle.
- **Stay well away** from the downhill side of all roads.
- Allow opposing heavy vehicle traffic to **pass slowly on the uphill side** of narrow access roads, after ensuring there is adequate room.
- Increase the following distance to **maintain visibility**.
- **Use a spotter** when backing or turning around your vehicle. Do a walk around if a spotter is not available.

INCIDENT RISK ANALYSIS

ICS (215A) DAY SHIFT

BR/DV	HAZARDOUS ACTIONS – CONDITIONS	MITIGATIONS – WARNINGS – REMEDIES
ALL	STEEP TERRAIN & ROLLING DEBRIS	<ul style="list-style-type: none"> • Maintain 8'-10' spacing when working & walking. • Do not work above any personnel. • Evaluate the necessity to send personnel into areas with limited access.
ALL	TRAFFIC HAZARDS AND DRIVING	<ul style="list-style-type: none"> • Take extra precautions when entering or exiting the roadways. • Maintain high visibility when in the operational area and use warning lights when working on roads or traveling in smoke. • Many roads are narrow and mid-slope, with soft shoulders. Allow heavy vehicles to pass on the uphill side. Use spotters when backing or turning around. • Keep your speed down in all areas. Drive at or below posted speed limits. • Use warning lights when working on roads or traveling in smoke. • Use chock blocks and turn wheels into hills. • Be alert for wildlife. Dusk to Dawn poses the greatest potential for accidents.
ALL	HAZARD / DANGER TREES	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p.22.) • Limit the number of personnel around snags and their exposure time. • Fallers must be qualified for the trees being felled. • Be alert around hazard trees during wind events, even green trees. • The hazard zone extends a minimum of 2½ tree lengths. • Avoid parking vehicles or taking breaks under or near hazard trees
ALL	INDIRECT LINE CONSTRUCTION	<ul style="list-style-type: none"> • Establish and maintain LCES. • Utilize favorable locations when constructing control features, i.e., lighter fuels, natural or existing barriers, and ridgelines. • Watch out as there is unburned fuel between you and the fire.
ALL	WEATHER	<ul style="list-style-type: none"> • Maintain continuous Situational Awareness based on the fire environment, observed fire behavior, hazards, and incident objectives. • Take weather throughout the shift to get timely and accurate information. • Is what we predicted what you are observing? • Request spot weather forecasts if you notice a notable change in the weather. • Communicate any changes in weather with your crew and adjacent resources
ALL	FIRE BEHAVIOR	<ul style="list-style-type: none"> • Are you seeing what we have predicted? • Conduct thorough assessments before starting work. • Ensure LCES is in place. • Plan & communicate your exit strategy with your crew and adjacent resources. • Provide additional briefing for new resources and maintain communications
ALL	AIR OPERATIONS	<ul style="list-style-type: none"> • Follow "Aviation Watch-Out Situations" on page 46, IRPG. • Do not plan on air resources for tactical support or medical transportation. • Refer to page 58, IRPG, for directing bucket drops. • Ensure positive communication with air resources
ALL	MOP-UP	<ul style="list-style-type: none"> • Balance the risk of exposure to hazards against the mop-up objective • Evaluate areas for hazard trees and locate stump holes for avoidance. • Monitor fatigue; shorten shifts to increase rest where appropriate. • Review and follow "Look Up, Look Down, Look Around" procedures. • Evaluate mop-up distances against what is safe and necessary.
ALL	HEAVY EQUIPMENT OPERATIONS	<ul style="list-style-type: none"> • Ensure communications are established with operators. • Use hand signals if other communications are unavailable. • Maintain a 50'-100' exclusion area around equipment. • Use road guards as needed to control traffic.
ALL	NIGHT OPERATIONS	<ul style="list-style-type: none"> • Have a purpose for where you drive and what you do. • Use caution where you park or stage, especially in steep timbered areas. • Use available time for briefings on roads, terrain, and potential rolling material, especially if the resources are new to the area. • Use glow sticks to mark hazards, and ensure personnel have headlamps.
ALL	STRATEGIC/TACTICAL FIRING	<ul style="list-style-type: none"> • Follow the chain of command when undertaking burning operations. • Ensure aerial/ground ignition plans have been well briefed, including LCES and drought-related fire behavior considerations. • Wear and use appropriate PPE. • Initiate burning after ensuring the plan is authorized and understood by all.

HUMAN RESOURCE MESSAGE

Communication is a two-way street. When communication becomes a one-way, it becomes a traffic jam and turns into an issue. Some examples are:

- Someone irritating you and getting on your nerves, but you don't say anything until it boils over and causes a crash.
- A misunderstanding of what someone was trying to communicate to you, but you didn't take the time to clarify what was said and just stewed about it.
- It can be like the telephone game. It starts with specific information and by the time it gets to the end it's very different than what was first communicated.
- You have an expectation an individual should have known about a situation when you didn't communicate about it at all. We're not clairvoyant

Whatever it is, clear the communication lines in a respectful manner and make it a smooth safe flowing two way street

“The single biggest problem in communication is the illusion that it has taken place”....by George Bernard Shaw

Feel free to call/text or come by the HRSP yurt if you have questions, concerns, or just want to chat.

Smith River Complex Incident: Resource Advisor Message

IMPORTANT: Yellow/White Striped flagging 'Equipment Exclusion' indicates resource **AVOIDANCE** areas.

Port Orford Cedar root disease

Some local drainages are infected with a root disease that spreads via mud and water. To prevent spreading this disease to uninfected areas, all water tenders and engines will apply bleach to their tanks in a 1:1000 ratio (using bleach with 6.0 % Sodium hypochlorite).

*Designated Draft Site Location by Division (setup with Bleach and fish screen)

- DP85 (Coon Creek) - Div YY
- Steven's Bridge & Hurdygurdy Bridge - Div VV, SS

Fish Screens: Coho Salmon Critical Habitat

Most rivers and streams in this area are considered critical habitat for Threatened Coho salmon. Please ensure that Mark 3 and Engine/Tender suction hoses have the appropriate screen attached. Talk to a READ if you think you need a screen!

WEED WASH:

The area in and around the Smith River Complex, are home to many sensitive species. Infestations of highly invasive plant species are one of the largest threats to sensitive species populations here. Spread via vehicles and foot traffic as well as re-activation via fire is of high concern. To help protect these sensitive places, do not park in and try to avoid areas flagged areas. **Make sure to visit the WEED WASH at either Gasquet Base Camp OR Elk Valley ICP for demob and additionally if needed, as directed by the READs.** Located on Elk Valley Rd Camp.
