Fire Behavior Forecast #37

Incident: Smith River Cx North CA-SRF-000968	TYPE OF FIRE: Wildfire
DATE/TIME ISSUED: September 25, 2023 1900	OPERATIONAL PERIOD: Sept. 26, 2023 0700-1800
FBAN: Scott MacDonald (541)-993-3444	Signed: <i>Wm. Scott MacDonald</i>

Weather Summary - See Incident Weather Forecast:

Fuels

Shrub: Shrubs and brush 1 to 3 feet high with a very low load of grass intermixed with sparse conifer. Manzanita brush and other live fuels are moderately available for consumption with independent fire. These fuels will be more reactive to higher wind speeds and show greater rates-of-spread in exposed areas (ridges)

Timber litter and shrub: Primary carrier of the fire is understory brush with timber and leaf litter. Expect moderate spread rates in sheltered areas. Canopy closure shelters fuels from wind, making fire spread to be slow with low to moderate winds.

Grass/light fuels: Primary carrier of the fire is open grass areas with light shrub and mixed timber at lower elevations (valley bottoms in IA response area). Grasses are fully cured with seasonal drying, and will be reactive to higher winds

Fire Behavior: Minimal (very low) Max. spot distance: minimal Wild Rivers ERC%: 56 th percentile BI%: 61 st percentile POI = 5 to 15 percent	Fuel/Type Model	Maximum Rate of Spread	Maximum Flame Length
	Shrub	0 - 1 Ch./hr.	0 - 1 ft.
	Timber litter shrub	1 - 2 Ch./Hr.	1 - 2 ft.
	Grass (lower elevations)	0 - 3 Ch./hr.	0 - 1 ft.

Expected Fire Behavior is Based on the Warmest, Driest, Windiest Conditions Forecasted assuming wind/slope/fuels are aligned

General/Potential: Continued cloud cover as system passes over fire area, adding extra shading on fire area (75%+); Lower temps and high min. RH will continue to keep fire behavior potential minimal (very low); Southerly winds on ridges/exposed areas continue, but at diminished speeds. POI very low with increased shading, lower temps, and higher RH. As precipitation continues, fire behavior will be in the minimal fire behavior (very low) category. Torching not likely.

Div. E/F: If an IA fire occurs expect very low (if any) fire behavior affected by wind, slope and heavy timber/fuel loadings. Overall fire behavior will be **minimal** (very low) as fuel moistures reach moisture of extinction.

Suppression Repair / Div. G/H (includes Utility Group area): Fire activity will be minimal (very low) in green islands of fuel as precipitation occurs and continues with showers; Smoldering, creeping, very limited backing, and heavy fuels continue consuming in heavily sheltered/Protected areas. Fire behavior will be in the **minimal** (very low) category, as fuel moistures increase or reach moisture of extinction.

Div. I/K: Minimal smoldering and creeping likely to occur in unburned islands of fuel; fire behavior is **minimal** (very low) as fuels reach moisture of extinction.

IA Response: Limited potential for **very low** fire behavior in light flashy fuels in valley bottoms/toes of the slopes due to high wind. Fine fuels, such as cured grass, tend to react to wind speed quickly, even as RH increases are occurring until moisture of extinction is reached (above 16% find dead fuel moisture).

Air Operations:

Continuing clouds may limit air operations due to visibility distances and gusty winds – plan accordingly, if air is the only option for responding to a medical emergency

Safety:

Watch your footing (large slick fuels, hot stump holes, etc.) and overhead hazards (Snags, burned out green trees, human infrastructure, etc.). Go slow to go fast.

HEALTH AND SAFETY MESSAGE

Incident: Smith River Complex	Date: 9/26/2023	Operations: Day Shift
<p><u>Major Hazards and Risks:</u></p> <p>Hazards Trees, Driving, Inclement Weather, Rolling Materials, Complacency, Local Traffic</p>		
<p><u>Complacency</u></p> <ul style="list-style-type: none"> • Complacency – One of the standard fire orders stresses the importance of staying alert. Complacency and staying alert are not compatible. The hazards haven't gone away so we need to stay focused on them. It only takes a second of complacency for an accident to occur. 		
<p><u>Driving</u></p> <ul style="list-style-type: none"> • Obey Speed Limits and always drive cautiously • Be alert for other traffic and roadway hazards • Slow down, keep right, and expect someone around every blind corner • Be responsible while driving, always keep your situation awareness up 		
<p><u>Risk Management</u></p> <p>This process assists in ensuring that critical factors and risks of the fireline work environment are considered during decision-making. Good risk management utilizes a six-step process:</p> <p>Risk Management Cycle</p> <pre> graph TD SA[Situation Awareness] --> AS[Assessment] AS --> RC[Risk Control] RC --> D[Deploy] D --> I[Implement] I --> E[Evaluate] E --> SA </pre>
