Specifics:

Branch V:
Division RR: Minimal fire behavior, interior smoldering.
Division SS/VV: Minimal fire behavior, interior smoldering.

Branch XX:
Division LL: Minimal fire behavior, interior smoldering.
Division MM/PP: Minimal fire behavior, interior smoldering on PP. No fire behavior expected on MM.
Division YY: Minimal fire behavior, interior smoldering.

Initial Attack and Emergency Response: Be aware of secondary fire effects such as fire weakened trees, unstable root systems, soft shoulders, and falling rocks in steep canyons.

Air Ops/Smoke Dispersion

Fog will limit visibility early in the morning, but conditions should clear by late morning and no limits in the pm.

Safety Message

Smoldering fire behavior still carries several hazards – ash pits, stump holes, steam burns, and crud in the eyes. Ensure safe practices are followed when providing suppression repair and mopping up. Recent rains may have made snags and trees “top heavy” with moisture, and loosened rocks that may fall and roll.

Watch for fire weakened root systems. Trees with weak root systems can fall with very little wind. As smoke lifts look around your work area again; as overhead hazards may have gone unnoticed over the past week because of the limited visibility and haze. Areas of deep ash may be concealed with darker material.

Look up, look down, look around.

INCIDENT #CA-SRF-000968

DATE: 09/28/23 TIME: 0700-1900 Day Shift

KNOW YOUR OBJECTIVE:

- **TASK.....**What is to be done.....Strategy and tactics
- **PURPOSE.....**Why it is to be done.....Big picture...who, what, when, where, why, etc...
- **END STATE...How it should look when I'm done....Quantify your expectations....Leaders Intent**

Motivate firefighters with a “can do safety” attitude.

Leadership
Toolbox

- Prepare Your Subordinates
- Know Your Subordinates
- Set the Example

PPE/LCES /Hazard Trees/Weather/Driving /Fire Behavior

- Do you have the right PPE for the task and using it correctly?
- Is your LCES in place?
- Fire behavior: is the fire doing what was predicted?
- Is the weather changing? Dry – Wet?
- Driver safety cushion in place, Given the conditions of the road?

Some possible mitigation could include:

- Inspect PPE daily. Review JHA if in doubt about appropriate PPE. PPE must become second nature because failing to compromises safety.
- Validate:
 - Lookout is still in the best location for the assignment.
 - Communications are still good, or do I need to do a radio check?
 - Escape route is still valid, or do I need to reestablish a new escape route?
 - Can I survive in my current safety zone given the current weather conditions or should I reestablish another safety zone?
- See attached Hazard Tree sheet.
- At 1400, take a 10-minute break and re-access your current situation against objectives. How has the environment changed and how does that effect your work? Have you made a plan for that changing condition.
- Continue to take spot weather for updated local weather conditions. Share observations with the ITMET your input will help validate and update the forecast and fire behavior.
- Will your speed allow you to slow down or stop if you encounter another vehicle or animal around the next curve?

Risk Management for Hazard Trees

Hazard trees both dead (snags) and green trees are one of the highest risks found in forests on the Smith River Complex. Observe & share hazard tree intel with your crew and others on the fireline.

Ask yourself: How serious is the hazard & what is the probability that it will occur?

Environment:

- Steep slopes
- Burned area
- Changing forest health conditions – Diseased/bug-kill areas
- Number and height of hazard trees
- Potential for trees to domino into each other.
- Gusty winds from storm cells
- Water/ retardant drops or copter rotor wash
- Night operations

Tree Indicators:

- Trees burning for any period of time
- High risk tree species (rot and shallow roots)
- Numerous downed trees
- Dead, broken, or burning tops and limbs
- Absence of needles, bark, or limbs – SNAGS!
- Leaning or hung-up

Hazard Control and Mitigation:

- Utilize qualified sawyers & Falling Bosses
- Establish a secure felling area, minimum of 2 ½ times tree height
- Post a lookout to keep personnel clear of the felling area
- Initiate road closure & traffic control if necessary
- Plan a quick & safe escape route if Plan A does not work
- All eyes on the tree being felled and trees in the falling layout
- Stay clear of the felling area until “All Clear” called by the sawyer
- Flag, sign & map “No Work Zones” in high risk areas
- Keep clear of water/retardant drops near trees/snags
- Reposition to a safe area in response to high wind forecast

MAINTAIN SITUATIONAL AWARENESS – LOOK UP AND LIVE!

Smith River Complex Incident: Resource Advisor Message

IMPORTANT: Yellow/White Striped flagging 'Equipment Exclusion' indicates resource AVOIDANCE areas.

Cultural and Heritage Resources:

The area you are working in is rich in cultural and heritage resources which may be encountered while fighting fire or during suppression repair. Avoid disturbing cultural or heritage resource if encountered.

- GPS its location and take a photo, do not remove or collect anything. Work with your division to notify a READ for recommendations on how to proceed.
- Some cultural resources present hazardous conditions, such as mining shafts. Be attentive to these potential hazards when working around known mining areas or in rocky areas.
- Known resources may be flagged ahead in work areas.
- Finding of cultural resources should not be reported over the radio.
- Coordinate with READs on all dozer operations to minimize impacts to cultural and heritage sites. Limit dozer operations to pre-existing dozer lines and limit widths to the extent possible.

Port Orford Cedar root disease

Some local drainages are infected with a root disease that spreads via mud and water and kills Port Orford cedar trees. To prevent spreading this disease to uninfected areas, all water tenders and engines will apply bleach to their tanks (1:1000 ratio). **Designated Draft Site Location by Division (setup with Bleach and fish screen)**

- Panther Flat Day Use - Gasquet Structure Grp, Div A
- DP 10 (Gasquet Ranger District) - ALL Divs
- DP85 (Coon Creek) - Div YY

WEED WASH:

The area in and around the Smith River Complex, are home to many sensitive species. Infestations of highly invasive plant species are one of the largest threats to sensitive species populations here. Spread via vehicles and foot traffic as well as re-activation via fire is of high concern. To help protect these sensitive places, do not park in and try to avoid areas flagged areas. **Make sure to visit the WEED WASH 1 mile east Gasquet Base Camp on south side pullout State Highway 199.**

Human Resource Message

C o m m u n i c a t i o n

Communication is a two way street. When communication becomes a one way, it becomes a traffic jam and turns into an issue.

Some examples are:

- ❖ Someone irritating you and getting on your nerves, but you don't say anything until it boils over and causes a crash.
- ❖ A misunderstanding of what someone was trying to communicate to you, but you didn't take the time to clarify what was said and just stewed about it.
- ❖ It can be like the telephone game. It starts with specific information and by the time it gets to the end it very different than what was first communicated.

Whatever it is, clear the communication lines in a respectful manner and make it a smooth safe flowing two way street!

“The single biggest problem in communication is the illusion that it has taken place”....by George Bernard Shaw

The Human Resources Specialists are here on assignment to help you and your teams manage the operational stress keeping your crews safe, positive, and productive increasing your situational awareness.
