FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 46	TYPE OF FIRE: Wildfire
FIRE NAME: Smith River Complex – South	OPERATIONAL PERIOD: October 4 (0700 – 1900)
DATE ISSUED: October 3, 2023	TIME ISSUED: 1800

INPUTS

WEATHER SUMMARY:

Breezy northeasterly winds will continue through the afternoon hours. Strongest winds will be on the exposed ridgetops. The offshore flow will continue and result in warmer and drier conditions through Friday.

FUELS SUMMARY:

Due to below normal precipitation last winter, live fuel moisture levels did not fully recover this spring, making the shrubs readily available for consumption at the onset of the complex on August 15th. Over the last month most of the fire area has received over 4" of rainfall causing significant spikes in both live and dead fuel moistures. There should be minimal available fuel to burn which would cause concerns across the fire area.

OUTPUTS

FIRE BEHAVIOR**GENERAL:**

With the increases in fuel moistures and overall moderated weather conditions, Energy Release Components are hovering around 25%, levels typically not seen until the end of October. The next several days of warmer and drier conditions are expected to cause fire danger indices to increase but will only reach seasonal levels before being impacted by another widespread precipitation event early next week. Fire behavior will be isolated to the smoldering of the larger dead and down surface fuels and stump holes.

Fire Danger Indices – 2022 IRPG Page 39Energy Release Component (ERC): 25thOctober Average ERC Percentile: 45th

Maximum Spotting Distance: 0.25 miles

Peak Burn Period (1200 – 1600) - Probability of Ignition (PIG): 32% (unshaded)**SPECIFIC:**

Branch V: The western portion of the complex is showing minimal heat anywhere near the perimeters. There will likely be miscellaneous smokes that pop-up with the forecasted warmer, drier, and breezier conditions the next several operational periods. Assess the signs of heat for potential threat to the line and ease of access and act accordingly.

Branch XX: The National Infrared Operations flight is still noting a fair amount of interior heat along the eastern portion of the Kelly fire. The only heat detected within 500-feet of any perimeter is on the southeast portion of the Hurdy Gurdy near the South Siskiyou Fork in Div. K.

AIR OPERATIONS:

Sunrise 0649, Last Light 1941 (Daylength: losing 2 min, 45 sec each day)

Although breezy in the afternoon, minimal visibility issues and overall good flying conditions are expected for the operational period.

SAFETY

The slopes are steep, trees and rocks are large, and rolling material is common. Pay attention where you are driving, parking, working, and taking breaks.

Smith River Complex South– Safety Message

INCIDENT #CA-SRF-000968

DATE: 10/04/2023 TIME: 0700-0700

Rapid Extraction Module Support (REMS)

- Its purpose is to provide the incident with a safety measure to extract personnel on the fireline with illnesses or injuries unable to walk out on their own.
- 4-member team trained in advanced technical rope rescue for over-the-side rescues.
- Equipped with wheeled stokes to transport personnel to a ground or air transport.
- Some teams are equipped with Advance Life Support (ALS) equipment. Inquire with Division.
- Its origins come from having a form of rescue entity in the event air resources would not be able to access or fly because of weather, smoke, inversion layer, or the risk was too high.

Camp Hygiene

- Hygiene refers to the practices that help maintain good health and prevent the spread of diseases. It involves keeping oneself and one's surroundings clean and free from germs. Good hygiene is essential for maintaining both physical and mental health. Practicing good hygiene can help prevent the spread of infectious diseases, such as the common cold and flu. It can also help prevent skin infections, food poisoning, and other illnesses caused by germs.
- Good hygiene practices include washing hands regularly, taking a bath or shower daily, brushing teeth twice a day, wearing clean clothes, and keeping one's surroundings clean.

Call home and initiate social connections. • Monitor resources and engage in healthy activities. • Focus on positivity and engage in self-care.
ALL	HEAVY EQUIPMENT OPERATIONS	<ul style="list-style-type: none"> • Ensure communications are established with operators. • Use hand signals if other communications are unavailable. • Maintain a 50'-100' exclusion area around equipment. • Use road guards as needed to control traffic.
ALL	INJURY & MEDICAL EMERGENCY	<ul style="list-style-type: none"> • Pre-Plan for medical emergencies, see IRPG, pg. 2. • Use EMPF'S and EMTF's on Division for initial care. • Follow medical protocol as outlined. Review ICS 206, MIR and IRPG Pgs 118-120 • Identify approved adequate extrication points and reassess, as needed. • Consider air extraction, if available.
ALL	MOP-UP	<ul style="list-style-type: none"> • Balance the risk of exposure to hazards against the mop-up objective. • Evaluate areas for hazard trees and locate stump holes for avoidance. • Monitor fatigue; shorten shifts to increase rest where appropriate. • Review and follow "Look Up, Look Down, Look Around" procedures. • Evaluate mop-up distances against what is safe and necessary.

Smith River Complex Incident: Resource Advisor Message

IMPORTANT: Yellow/White Striped flagging 'Equipment Exclusion' indicates resource AVOIDANCE areas.

Cultural and Heritage Resources:

The area you are working in is rich in cultural and heritage resources which may be encountered while fighting fire or during suppression repair. Avoid disturbing cultural or heritage resource if encountered.

- GPS its location and take a photo, do not remove or collect anything. Work with your division to notify a READ for recommendations on how to proceed.
- Some cultural resources present hazardous conditions, such as mining shafts. Be attentive to these potential hazards when working around known mining areas or in rocky areas.
- Known resources may be flagged ahead in work areas.
- Finding of cultural resources should not be reported over the radio.
- Coordinate with READs on all dozer operations to minimize impacts to cultural and heritage sites. Limit dozer operations to pre-existing dozer lines and limit widths to the extent possible.

Port Orford Cedar root disease

Some local drainages are infected with a root disease that spreads via mud and water and kills Port Orford cedar trees. To prevent spreading this disease to uninfected areas, all water tenders and engines will apply bleach to their tanks (1:1000 ratio). **Designated Draft Site Location by Division (setup with Bleach and fish screen)**

- Panther Flat Day Use - Gasquet Structure Grp, Div A
- DP 10 (Gasquet Ranger District) - ALL Divs
- DP85 (Coon Creek) - Div YY

WEED WASH:

The area in and around the Smith River Complex, are home to many sensitive species. Infestations of highly invasive plant species are one of the largest threats to sensitive species populations here. Spread via vehicles and foot traffic as well as re-activation via fire is of high concern. To help protect these sensitive places, do not park in and try to avoid areas flagged areas. **Make sure to visit the WEED WASH 1 mile east Gasquet Base Camp on south side pullout State Highway 199.**

HAZARD TREE ABATEMENT GUIDELINES

17N05 and 17N08 Road Systems

Treatment Extent Includes Items 1-3

- 1) Cutting trees within 1.5 tree lengths above the road and 0.5 dominant tree height (roughly 80') below the road.
- 2) Only cutting **completely** dead trees. Trees with a **single green needle** shall stay unless impeding operations (ie. completely dead trees beyond trees with few green needles).
- 3) Felling of all trees less than 18" dbh, trees over 18" dbh may be cut if within striking distance of areas of moderate use. This includes areas of moderate and high personnel residence time such as landings, campgrounds, and bathrooms. Coordinate with Timber Resource Advisors on moderate use determination.

Key Operational Side Bars

- Ground equipment will be limited to slopes of 35% or less.
- Coordinate with Resource Advisors for equipment exclusion zone and site-specific treatments.
- No equipment is allowed within Riparian Reserves (Equipment Exclusion Zones) - 320 feet slope distance of perennial and 160 feet intermittent stream channels. Retain trees in Riparian Reserves, unless excessive fuels loading.
- Within Equipment Exclusion Zones, with coordination with resource advisors, material may be removed from these areas if full suspension can be achieved in order to prevent excess fuels loading.
- Whole tree yard and skid to greatest extent practicable.
- Minimize Landing Sizes
- ≥ 1 ft. stump height

Rules and Guidelines:

- **Always buck for the longest preferred length. Preferred Lengths are 16'6", 33' and 41.**
- Logs not capable of being bucked to a preferred length shall be bucked to the next longest length in two-foot (2') multiples.
- Minimum scaling diameter is 6" DIB. Minimum log length is 10'. Maximum log length is 41' for tree less than 36" dbh.
- All trees 36" dbh or higher felled and retained onsite, unless excessive fuels loading

Unless otherwise specified during operations, each piece less than or equal to 20 feet will have a trim allowance of 6 inches. All logs 22-40 feet will have a 12-inch trim allowance.

Slash

- (1) **Chipping** is the preferred method – chip depth should not exceed 6 inches.
- (2) **Machine piles** – this is second preferred method of slash disposal. **No soil in piles.** Follow site specific of pile size and placement. Cover piles with **black 6ml plastic** over a **minimum of 75% of the pile.**
- (3) **Stack hardwood boles separately.** Keep stacks < 10 ft. in height.
- (4) Slash must be spread to a depth of not more than six (6) inches.

Flagging colors

- o **Red:** Private Property boundary
- o **Yellow:** Boundary of Little Jones Timber Sale
- o **Orange:** Landing
- o **White and yellow striped "EQUIPMENT EXCLUSION":** Avoidance area (Exceptions: work with Resource Advisors for special circumstances)
- Minimize walking equipment across chip sealed or asphalt surface. Rubber mats or tires are required when crossing.
- Keep road surface and ditches free and clear of debris.
- Protect all structural improvements

Human Resource Message

Navigate

Our ability to navigate through difficult situations has a lot to do with our ability to shift our perspectives. When we get locked into a particular viewpoint, an obstacle can appear overwhelming. Sometimes, we just need to step back and look at the situation from different angles. In doing so, we often can find ways to easily navigate around an obstacle that once appeared insurmountable. Some call this going with the flow.

Challenge your trainees...

...Let them take charge; let them fall, but don't let them hit the ground.

The lower they fall, the more challenges they face, the higher they will fly.
