2023 SRF Lost Fire Spot Weather Forecast

Name Of Incident: Lost Fire - 2023 SRF Complex

Unit: Div XL

Prediction For: Tuesday, Aug 22, 2023

Time/Date Issued: Monday, 8/21/2023

Location: Lost Fire

Signed: Rebecca Muessle - Incident Meteorologist

Discussion: Marine stratus in the morning slowly shifts westward through the day. Patchy fog possible in the morning and late at night. Northeastern drainage winds in the morning will become northwesterly through the day. Through E-W aligned terrain, gusts up to 12 mph. Along the ridgetops gusts to 17 mph. Return to the northeast and drainage winds overnight. No precipitation expected. Overnight will see minimal change in conditions as the lowlands in the valleys will see high humidity. The inversion is fairly weak until after 2200 when it rebuilds to 800 ft. Thermal belt 500-1000 ft.

OUTLOOK FOR WEDNESDAY:

Thinning clouds through the day with a thermal trough forming along the coast. Onshore winds will prevail through much of the day with less of an offshore land breeze overnight. Will see the traditional diurnal effects with breezy winds in the afternoon. The inversion will form in the early morning up to 1300 ft, then weaken after 1200. Smoke will settle. Temperatures will be warmer than previous days due to less dense marine stratus. Temperatures in the valleys will be mild in the 70s, while above 1500 ft, temperatures will be in the low 80s. With stratus rebuilding, temperature drops will be stifled.

FUELS SUMMARY: Dense mixed conifer, old-growth timber, heavy dead/down, mixed ground fuels.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

The majority of all of the fires in the complex are presently in a backing alignment. Primary fire spread will be active backing surface fire. Roll out will also contribute to fire spread. Rapid upslope runs are possible when fire reaches drainage bottoms and reverses slope. Spotting from torching trees will be short range less than 100 feet. With the large amount of snags expect some single tree torching. The cloud cover and smoke will moderate fire behavior. However, if the smoke and clouds clear, expect a dramatic increase in fire behavior. With the steep multiple intersecting drainages, active fire has a high probability of generating fire whirls.

If any resources are dispatched to assist with IA expect minimal rates of spread with mainly surface fire and some torching in the denser tree stands.

SPECIFIC:

Lone Pine: No forward fire progression is expected, fire behavior will be smoldering and creeping. Containment lines will continued to be challenged from rollout and falling snags.

Pearch Fire: Expect active backing and flanking fire spread. Keep a heads up for fire spread or rollout that could lead to slope reversals. Fire established on an aligned slope will have rapid rates of spread and the potential for short crown runs. All other fires to the north including

Mosquito Fire: Minimal forward progression expected for the next 24 hours.

Redwood Fires: Lost Fire: Expect backing fire with minimal flame lengths. Some single and group tree torching is probable with short range spotting. Keep a heads up for fire movement south across Lost Man Creek which will lead to a slope reversal up Holter Ridge. 100-1000hr fuels are what's carrying the fire. Devil and Glen Fires: Continued smoldering with no new forward fire movement expected.

Night Shift: With the RH recovery minimal forward fire progression is expected on any of the fires.

AIR OPERATIONS: With the smoke and cloud cover opportunities for air support are minimal.

SAFETY

- Make sure Lookouts are posted in places where they can see potential spotting.
- Fire weakened timber poses a threat to personnel working in timber areas.
- Unburned fuel between you and the fire.

SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

Major Hazards and Risks:

Working with Aircraft: Don't base your plan on the availability of aircraft for success. Do not let an overwhelming sense of urgency pressure you (or the pilot) into working in unsafe conditions. Clear all areas of personnel prior to any drops and avoid direct overflights.

Driving Soft Roads: Visibility is compromised by dust, especially in the morning hours and sunset, so slow down. Some roads on the incident are deteriorating condition, so make sure you have an alternative road. If your vehicle gets stuck have a plan before you start to get pulled out. Stay clear of cables and chains in case there is a failure on equipment extrication.

Environmental Hazards – Be watchful for Bears, Rattlesnakes, Bees, and other insects that bite or sting. Don't leave food out, haul out your trash daily. Look before you step or place hands on the ground. Identify who on your crew is allergic to Bees and ensure medication is available.

Hazardous Tree Indicators

It's important to identify the hazardous trees in your work area before engaging.

- Strong winds
- Night Operations
- Steep Slopes
- Disease or bug-kill timber
- Trees and duff have been burning for an extended period
- High-risk tree species
- Numerous down trees
- Old fire scar
- Dead or broken tops and limbs overhead
- Accumulation of downed limbs
- Leaning or hung-up trees
- Look up, Look Down, Look Around

After identifying the hazard trees: look for hazard control measures to mitigate your risks. IRPG pgs. 20 & 21

ROLLING MATERIAL

Be prepared for snags, rocks and other fire weakened material to fall or roll downhill.

Watch for snags and trees that have been burning for days, as they have weakened and have the greatest opportunity to fall.

Post lookouts as needed and assure LCES is place before engaging.

Look for indications such as down trees, and rocks slides in fire area. No native vegetation to hold rolling rocks,

Avoid night operations in high-risk areas if possible.

Have an escape plan.

Team Safety Officers: Linda Ferguson, Annamaria Echeverria, John Nickey, Doug McKelvey, Matt Lipson

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.
