# 2023 SRF Lost Fire Spot Weather Forecast

**NAME OF FIRE:** 2023 SRF Lightning Complex  
**FORECAST FOR:** Wed, Aug 23th Day/Night Shift  
**FORECAST ISSUED:** Aug 22, 2023, 1900 PDT

**SIGNED:** /s/ Rebecca Muesle - IMET

**Discussion:** General onshore flow through the next 48 hours. High pressure builds over the region today which will cause the inversion at the surface to intensify. The inversion will persist at 700 ft through much of the day causing little mixing of clouds and smoke. Patchy morning fog in the valley bottoms where humidity nears 100%. Above the inversion (1500 ft) expecting much more mixing which will improve smoke concentrations. Morning northeasterly drainage winds will become northwesterly and upslope in the afternoon. Low pressure nears the coastline on Thursday which will cause a change in the overall weather.

**For Branch X & V fire weather, please see previous page**

<b>Valleys:</b> Drainage 2-5 mph	<b>Valleys/Slopes:</b> W 4-8 mph becoming NE 2-5 mph
	<b>Ridges:</b> W 8-12 mph becoming NE 4-7 mph

## **OUTLOOK FOR THURSDAY:**

Pattern shift as a series of low pressure systems will move throughout the Pacific. We will see stronger onshore flow and winds, especially in the afternoon. These winds will cause a bit more mixing allowing for the lower levels of the atmosphere to clear out in regards to skies and smoke. Fog is less likely. An inversion will once again set up in the late afternoon as warmer air moves in at 1500 ft and cooler air settles near the surface. High temperatures in the valleys will be unchanging from the past few days with highs in the 60s-70s. Above the inversion temperatures will be in the 80s. Smoke will still temper highs for the days. Humidity will also lower to near 35% above 700 ft, and near 45% in the valley. Overnight recoveries will be high except along the ridge tops that are exposed to winds. Winds will be elevated between 1700-0200. Could see gusts as high as 25 mph. Confidence is low at this time. In the afternoon there is a 10% chance of showers and thunderstorms.

# FIRE BEHAVIOR FORECAST

## INPUTS

### WEATHER SUMMARY:

\*\*\*Warmer and Dryer\*\*\*

Temps: Inland Day 79-86 Night 52-67 Redwood Day 69-83 Night 52-62  
RH: Inland Day 27-35% Night 87-98% Redwood Day 38-47% Night 75-96%  
Winds: Day Inland NE 8-11mph gusts to 20mph. Redwood NW 8-10 gusts to 18mph.  
Night Inland NE 4-6mph Redwood NE 4-7mph.

**FUELS SUMMARY:** Dense mixed conifer, old-growth timber, heavy dead/down, mixed ground fuels.

## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL:

Today is a transition day. Conditions are becoming warmer and dryer and there will be less shading from clouds and smoke. Expect, to see more active fire behavior, this includes multiple and group tree torching with short crown runs on aligned slopes. Primary fire spread will be active backing surface fire. Roll out will also contribute to fire spread. Rapid upslope runs are possible when fire reaches drainage bottoms and reverses slope. Spotting from torching trees will increase in range to 400 feet. With the large amount of snags, surface fire will be resistant to control. With the steep multiple intersecting drainages, active fire has a high probability of generating fire whirls.  
Probability of ignition 70%

If any resources are dispatched to assist with IA expect minimal rates of spread with mainly surface fire and some torching in the denser tree stands.

#### SPECIFIC:

**Lone Pine:** No forward fire progression is expected fire behavior will be smoldering and creeping. Containment lines will continue to be challenged from rollout and falling snags.

**Pearch Fire:** Expect active backing and flanking fire spread. Keep a heads up for fire spread or rollout that could lead to slope reversals. Fire established on an aligned slope will have rapid rates of spread and the potential for short crown runs. All other fires to the north including Hancock and Let er Buck expect active surface fire with slow rates of spread. With the heavy dead down component fire will be resistant to control.

**Mosquito Fire:** Expect active surface fire with single and group tree torching. With the fire located on an exposed ridge, keep a heads up for spot fires from the torching trees.

**Redwood Fires:** Lost Fire: Expect backing fire with minimal flame lengths. Some single and group tree torching is probable with short range spotting. Keep a heads up for fire movement south across Lost Man Creek which will lead to a slope reversal up Holter Ridge. 100-1000hr fuels are what's carrying the fire. Devil and Glen Fires: Continued smoldering with no new forward fire movement expected.

**Night Shift:** With the RH recovery minimal forward fire progression is expected on any of the fires.

**AIR OPERATIONS:** Clear conditions over the fires however, fog at the coast has the possibility of preventing the launch of aircraft.

## SAFETY

- Make sure Lookouts are posted in places where they can see potential spotting.
- Fire weakened timber poses a threat to personnel working in timber areas.

# SRF Lightning Complex- Safety Message

INCIDENT: SRF Lighting Complex

Date: 08/23/23-08/24/23 0700-0700

## Major Hazards, Risks, Mitigation Reminders:

- **Complacency, Be aware of:** Human Factors, Attitudes, Leaders Intent, Communication
- **Driving:** Slow and Cautious with Lights On. Watch out for Traffic & Wildlife
- **Snags and Weakened Trees:** Maintain Situational Awareness

- **Leadership:** Know who your leadership is, know where you are supposed to be, know your assignment, and who you report to. Ensure your radios have the appropriate frequencies. Give and receive understandable and comprehensive briefings. Confirm that information is received, acknowledged, and understood. Establish and maintain continuous information flow. Take your time through transitions, serious accidents can occur at any time. Know what your roles and responsibilities are. Be prepared to respond to an IWI.
- **Medivac Procedures:** *Take time to review the Medical Plan, ICS 206, know exactly how to proceed before an injury occurs. Know where the closest landing zone is and where the line EMTs are located.*
- **Driving:** Be aware of local traffic. Drive defensively. Hillside stabilization is weakened due to fire damage and steep slopes. Be heads-up while driving. Be mindful that the hillsides are unstable. Do not get distracted. Communicate traffic problems and hazards. Civilian traffic on highways tend to travel at high speeds. Continue to slow down, be courteous and drive cautiously. Be mindful of pedestrians and wildlife on the roads.
- **Snags and Weakened Trees:** Hazard Tree Safety, LCES is a must. Establish a NWZ (no work zone) if necessary. Make sure you communicate all hazards. If you see something – say something. Maintain Situational Awareness... Please Remember: Look Up, Look Down, Look Around
- **Heavy Equipment:** Keep a safe distance. Make sure the heavy equipment operator knows your location. Watch for rolling material, falling, and moving of trees, branches, logs, and rocks. Ensure the operators and folks working with the heavy equipment are trained and know the hazards. Don't approach moving equipment until you are sure the operator is aware of your presence.

## Practice Leadership in Safety

- **Situational Awareness:** Communications, Weather, Local Factors, Assess Hazards, Communicate Hazards.
- **Maintain Your Health:** Personal Safety, Safety of Others, Manage Fatigue, Minimize Risk Get Quality Rest, Get Good Nutrition & Hydration.

# SRF Lightning Complex Safety Team Risk Management for Hazard Trees

August, 2023

Hazard trees, both dead (snags) and green trees, are one of the highest risks found in forests on the SRF Lightning Complex. Observe & share hazard tree intel with your crew and others on the Fireline.

**Ask yourself: How serious is the hazard & what is the probability that it will occur?**

## Environment:

- Gusty winds from storm cells
- Water/ retardant drops or copter rotor wash
- Night operations
- Steep slopes
- Changing forest health conditions – Diseased/bug-kill areas
- Number and height of hazard trees
- Potential for trees to domino into each other.

## Tree Indicators:

- Trees burning for any period of time
- High risk tree species (rot and shallow roots)
- Numerous downed trees
- Dead, broken, or burning tops and limbs
- Absence of needles, bark, or limbs – SNAGS!
- Leaning or hung-up

## Hazard Control and Mitigation:

- Utilize qualified sawyers & Falling Bosses
- Establish a secure felling area, minimum of 2 ½ times tree height
- Post a lookout to keep personnel clear of the felling area
- Initiate road closure & traffic control if necessary
- Plan a quick & safe escape route if Plan A does not work
- All eyes on the tree being felled and trees in the falling layout
- Stay clear of the felling area until “All Clear” called by the sawyer
- Flag, sign & map “No Work Zones” in high-risk areas.
- Keep clear of water/retardant drops near trees/snags
- Reposition to a safe area in response to high wind forecast

**MAINTAIN SITUATIONAL AWARENESS – LOOK UP AND LIVE!**
