#### **INCIDENT OBJECTIVES (ICS 202)**

1. Incident Name:	2. Operational Period:			
SRF LIGHTNING COMPLEX	Date/Time From:		Date/Time To:	
	09/07/2023 0700	THU	09/08/2023 0700	FRI

#### 3. Objective(s):

#### STRATEGIC FRAMEWORK

Confine, contain, or control all fires utilizing a full suppression strategy. Values at risk include human safety, private timberlands, communities, cultural, critical infrastructure, and associated improvements. Apply tactics that offer the highest probability of success.

#### LEADERS INTENT

Provide the highest level of customer service to all involved with or impacted. Ensure transparent, timely and accurate communication at all levels of the incident and strengthen relationships with cooperators. All incident assigned personnel should be prepared to take appropriate actions regarding:

- Personal safety and the safety of others, including driving slowly and defensively.
- Manage fatigue by taking breaks and maintaining work/rest cycles.
- Minimize risk and limit exposure to infectious disease by implementing Center of Disease Control, California Department of Public Health, and agency guidelines.
- Professional behavior, and timely/effective communication.

#### MANAGEMENT OBJECTIVES

- Prior to engagement, stop and discuss strategies and tactics to ensure sound risk management principles are in place to provide for firefighter and public safety.
- Implement fire suppression activities in accordance with Incident Resource Advisors.
- Minimize impacts to communities, cultural resources, natural resources including old growth redwoods, critical power, communication and other infrastructure, private property inholdings, Tribal Lands, Timber Lands, TESC Species, and watersheds.

#### CONTROL OBJECTIVES

Keep Fires within the Six Rivers National Forest:

- · Within remote National Forest areas to protect heritage, cultural, natural resources.
- Away from private lands, Hoopa, Orleans, and Hwy 96 to protect the communities along the Klamath River corridor and private lands.

Keep Fires within the Redwood National Park:

As small as possible and within park lands to protect old growth redwoods, private timber land and cultural values.

#### 4. Operational Period Command Emphasis:

- Manage risk to firefighters by ensuring hazards are identified, assessed, and where possible mitigated. Be prepared to accept residual risk when values threatened warrant it and the probability of achieving objectives is high.
- 2. Utilize strategies and tactics that commit responders only to operations where and when they can be successful, and under conditions where important values at risk are protected with the least exposure necessary.
- 3. Contain and control portions of the fire that are a threat to identified values to be protected.
- 4. Mop-up to the extent necessary to prevent escape of the fire and additional spread or damage to other values within the perimeter.
- Implement practices that reduce the potential for spread of infectious disease, such as distributed operations, adhering to CDC guidelines and other actions that improve the health environment for firefighters and support personnel.

#### General Situational Awareness:

- 1. Complete a good size up of your work area to mitigate hazards. 2. Be prepared for changing weather conditions.
- 3. Minimize firefighter exposure to falling tree hazards.
- 4. Know who you are working for.

### 2023 SRF Lightning Complex (Branches XX, X & V) Weather Forecast

FORECAST NO: 21

FORECAST FOR: Thu, Sep 7th Day/Night Shift

FORECAST ISSUED: Sep 6th 2023, 2000 PDT

NAME OF FIRE: 2023 SRF Lightning Complex

SIGNED: /s/ Ryan Walbrun - IMET

**WEATHER DISCUSSION:** No significant weather changes forecast today. Humidity values will start out drier for elevations above 3000 feet including the Blue Creek 2, Copper and Marlow fires in Branch XX. This drier air will continue to dry the fine fuels out and allow for better consumption for heavier fuels. General winds from the Southwest will remain light overall with some ridge top gusts to around 20 mph. Daytime highs near 90 degrees along Highway 96 with lower 70s for elevations above 3500 feet. Humidity values will lower to around 25% during peak afternoon heating, especially southerly exposed aspects in brushy fuel types. Humidity values only lowering to around 40% under thicker canopy in north shading aspects or creek bottoms.

#### For Lost Fire and Branch XL weather, please see next page

**<u>FORECAST FOR TODAY:</u>** Some patchy morning clouds/fog otherwise mostly sunny. Light winds and low humidity.

Branch XX Fires: Forecast Elevation 4000 feet. Branch V & X Fires:

**Extended Forecast:** Seasonal weather pattern continues into the weekend. Daytime highs mid 70s ridges to around 90 valley bottoms. Afternoon humidity values 25-35% with full nighttime recovery in the valleys and moderate recovery 40-60% mid and upper slopes. Winds will be light and terrain driven with general light and from the West, strongest afternoon and early evening hours. Long range trends suggest dry weather continues at least through the middle of the month and beyond.

### 2023 SRF Lost Fire Spot Weather Forecast

FORECAST NO: 18

NAME OF FIRE: 2023 SRF Lightning Complex SIGNED: /s/ Ryan Walbrun – IMET

FORECAST FOR: Thu, Sep 7th Day/Night Shift FORECAST ISSUED: Sep 6th 2023, 1900 PDT

------

<u>Discussion:</u> Increasing onshore flow should lead to a few degrees of cooling today with slightly higher humidity as marine clouds may linger through midday over the Lost Fire. However, overall changes are minor with no significant change to the fire environment. Should low clouds linger, don't depend on Air Operations when doing your risk assessment. Marine clouds will spread onto the lower slopes overnight with full humidity recovery. Overnight lows in the lower 50s.

For Branches XX, X, & V fire weather, please see previous page

**FUELS:** Primary fuels are conifer with litter and brush understory. The area has multiple burn scars adjacent to the fires with light fuels. Fire scars over 5-8 years old have a higher fuel load. Fire scars beyond 8-10 years old generally have a significant dead and down component with higher and more continuous brush that will support substantially higher rates of spread and intensity under dry conditions.

#### **Outputs**

#### General:

We are now several days out from the precipitation and the continuing higher temps and lower humidity throughout the day with lower recovery last night will mean that fuels are at a point where they can carry fire in the dryer areas. However, average to above average live fuel moisture in the timber and brush will remain. In general fire danger indices remain below average for this time of year will be slow to rebound to previous conditions before the rain even over last weekend.

#### FIRE BEHAVIOR:

Warmer and dryer air will start the drying process but the amount of daily solar radiation on the fuels will matter as well. All these factors will have a substantial effect on the fuels and the resulting potential for burning or fire spread.

Most of the fires in the complex show scattered heat that is distributed throughout the interior of the fire, but hotspots still exist along the perimeter of them as well. As solar radiation increases and warmer temperatures move into the area fuels will dry sufficiently enough that an increase in fire activity and that fire spread is possible in the dryer areas such as South slopes, brush fields and open stands. Under current conditions, higher wind speeds will be necessary for any substantial fire spread. Active fire spread will be very dependent on alignment of slope, fuel type, aspect and wind speed/direction. Due to the numerous fires in complex terrain located throughout the incident, site specific conditions will dictate fire spread potential.
