#### **INCIDENT OBJECTIVES (ICS 202)**

SUN

#### 3. Objective(s):

#### STRATEGIC FRAMEWORK

Confine, contain, or control all fires utilizing a full suppression strategy. Values at risk include human safety, private timberlands, communities, cultural resources, critical infrastructure, and associated improvements. Apply tactics that offer the highest probability of success.

#### LEADERS INTENT

Provide the highest level of customer service to all involved with or impacted. Ensure transparent, timely and accurate communication at all levels of the incident and strengthen relationships with cooperators. All incident assigned personnel should be prepared to take appropriate actions regarding:

- · Personal safety and the safety of others, including driving slowly and defensively.
- Manage fatigue by taking breaks and maintaining work/rest cycles.
- Minimize risk and limit exposure to infectious disease by implementing Center of Disease Control, California Department of Public Health, and agency guidelines.
- Professional behavior, and timely/effective communication.

#### MANAGEMENT OBJECTIVES

- Prior to engagement, stop and discuss strategies and tactics to ensure sound risk management principles are in place to provide for firefighter and public safety.
- Implement fire suppression activities in accordance with Incident Resource Advisors.
- Minimize impacts to communities, cultural resources, natural resources including old growth redwoods, critical power, communication and other infrastructure, private property inholdings, Tribal Lands, Timber Lands, TESC Species, and watersheds.

#### CONTROL OBJECTIVES

Keep Fires within the Six Rivers National Forest:

- · Within remote National Forest areas to protect heritage, cultural, natural resources.
- Away from private lands, Hoopa, Orleans, and Hwy 96 to protect the communities along the Klamath River corridor and private lands.

Keep Fires within the Redwood National Park:

As small as possible and within park lands to protect old growth redwoods, private timber land and cultural values.

#### 4. Operational Period Command Emphasis:

- 1. Manage risk to firefighters by ensuring hazards are identified, assessed, and where possible mitigated. Be prepared to accept residual risk when values threatened warrant it and the probability of achieving objectives is high.
- 2. Utilize strategies and tactics that commit responders only to operations where and when they can be successful, and under conditions where important values at risk are protected with the least exposure necessary.
- 3. Contain and control portions of the fire that are a threat to identified values to be protected.
- 4. Mop-up to the extent necessary to prevent escape of the fire and additional spread or damage to other values within the perimeter.
- Implement practices that reduce the potential for spread of infectious disease, such as distributed operations, adhering to CDC guidelines and other actions that improve the health environment for firefighters and support personnel.

#### General Situational Awareness:

- 1. Maintain a safe working distance when working in close proximity to heavy equipment.
- 2. Identify new escape routes and safety zones as needed, especially when implementing strategic firing operations.
- 3. Be aware of, and mitigate, mission creep.

WEATHER SUMMARY: \*REFER TO SPECIFIC IMET WEATHER FORECASTS\*

Sky: Mostly sunny

Maximum Temperatures: Highs 80's – low 90s in lower elevations 70s higher elevations, 60s Lost Minimum Humidity: 20% – 30% lower elevations, 30% - 40% higher elevations, 55% - 65% Lost Winds (20'): Ridgetops – SW/WSW 4-8 gusting 15-20, Lost NW/WNW 3-8 gusting 10-12

**FUELS:** Fuels are primarily conifer with litter and brush understory. The are multiple previous fire scars in the area. Fire scars over 5-8 years old will have a higher fuel load. Fuel loads in fire scars 8-10 years old will have a significant dead and down component and more continuous brush that will increase spread rates and flame lengths.

#### **OUTPUTS**

#### **FIRE BEHAVIOR**

#### **GENERAL:**

With only minor changes in the weather, fuels will continue to dry especially on south, southwest and west aspects. Fire behavior will be smoldering and creeping in the morning with surface fire spread by afternoon where current heat exists. May see spotting from rollout as well as isolated torching.

Maximum Surface Rate of Spread: Timber/Brush/Heavy Down/Dead: 8 Chains per

8 Chains per hour (head fire)

2 Chains per hour (backing fire) 6 Feet (head fire)

Maximum Surface Flame Length: T

Timber/Brush Heavy Down/Dead:

3 Feet (backing fire)

Crown Fire Potential: Isolated torching. Crown runs not expected.

Spotting Distance: 0-0.2 mi Probability of Ignition: 20-30%

Rollouts: Watch for locations where rollout is set up for and uphill run

#### SPECIFIC:

**Branch V:** No fire growth expected due to limited heat sources near the fire line. Interior heat expected to continue to produce smoke.

**Branch X:** Most areas of the branch are expected to remain minimally active with slow spread rates. Expect smoldering and creeping activity with minimal spread. Slow backing growth to the east/northeast on the eastern part of the Pearch in Butler Creek is expected to continue. Minimal growth expected on Interior islands and fingers.

**Branch XX:** The fires will continue to spread slowly where heat is showing on uncontained line. lower relative humidity recoveries quicken drying and allow for a longer burn period. As fuels dry out the possibility of surface head fire spread with short range spotting and isolated torching increases.

**Branch XL:** Fire activity expected to be minimal with good overnight relative humidity recoveries and higher forecasted relative humidities.

#### **AIR OPERATIONS**

As smoke production increases visibilities will decrease.

#### SAFETY

Don't be lulled into a false sense of security due to moderated fire behavior. Maintain good lookouts.

Share these points with the public as you have an opportunity.

- The weather is warming and drying. The public can expect to see more smoke, mainly from consumption of fuels inside the fire perimeters.
- The rains have created a changed fire environment. Modeling experts predict a low likelihood of significant fire growth for the rest of the season.
- We are entering a window where conditions are optimal for removing excess fuels from the landscape using carefully managed fire. Agency administrators and fire managers are considering possible options for the days ahead.
- Structure protection equipment (hoses, sprinklers, etc.) will remain in place for now. They will be removed when all threat is gone, probably several days from now.
- Fire management decisions are a collaborative effort involving US Forest Service, National Park Service, California State Parks, Karuk, Yurok, and Hoopa tribal authorities, and many other cooperators working together.

**WE WANT YOUR PHOTOS** - Email them to <u>2023.lightningcomplex@firenet.gov</u> or drop off at PIO trailer. **WE HAVE LOST & FOUND** – Drop off or pick up at the Information trailer.

# Guidance for Prevention and Management of Infectious Disease During Wildland Fire Operations

## **Key Recommendations**

- Monitor for signs and symptoms of infectious illness: fever, nausea, vomiting, diarrhea, abdominal pain, cough, runny nose, and red, itchy or painful draining eve.
- Limit face-to-face contact with others by implementing dispersed fire operations:
  - Smaller spike camps
  - Remote positions and radio or video briefings
  - No contact options by the food unit
  - Module as One approach to insulate as one unit
- · Routine sanitary and personal hygiene
- Regularly clean surfaces
- Mitigate smoke exposure for firefighters when tactics can be adjusted.
- Evaluate smoke impacts for spike camps and ICPs.
- Prioritize health and wellness: ensure fire personnel are well rested and practice appropriate sleep hygiene when possible; have access to healthy foods, and resources, activities, and practices that provide for positive mental health.
