3. Objective(s):

STRATEGIC FRAMEWORK

Confine, contain, or control all fires utilizing a full suppression strategy. Values at risk include human safety, private timberlands, communities, cultural, critical infrastructure, and associated improvements. Apply tactics that offer the highest probability of success.

LEADERS INTENT

Provide the highest level of customer service to all involved with or impacted. Ensure transparent, timely and accurate communication at all levels of the incident and strengthen relationships with cooperators. All incident assigned personnel should be prepared to take appropriate actions regarding:

- Personal safety and the safety of others, including driving slowly and defensively.
- Manage fatigue by taking breaks and maintaining work/rest cycles.
- Minimize risk and limit exposure to infectious disease by implementing Center of Disease Control, California Department of Public Health, and agency guidelines.
- Professional behavior, and timely/effective communication.

MANAGEMENT OBJECTIVES

- Prior to engagement, stop and discuss strategies and tactics to ensure sound risk management principles are in place to provide for firefighter and public safety.
- Implement fire suppression activities in accordance with Incident Resource Advisors.
- Minimize impacts to communities, cultural resources, natural resources including old growth redwoods, critical power, communication and other infrastructure, private property inholdings, Tribal Lands, Timber Lands, TESC Species, and watersheds.

CONTROL OBJECTIVES

Keep Fires within the Six Rivers National Forest:

- Within remote National Forest areas to protect heritage, cultural, natural resources.
- Away from private lands, Hoopa, Orleans, and Hwy 96 to protect the communities along the Klamath River corridor and private lands.

Keep Fires within the Redwood National Park:

• As small as possible and within park lands to protect old growth redwoods, private timber land and cultural values.

4. Operational Period Command Emphasis:

- 1. Manage risk to firefighters by ensuring hazards are identified, assessed, and where possible mitigated. Be prepared to accept residual risk when values threatened warrant it and the probability of achieving objectives is high.
- 2. Utilize strategies and tactics that commit responders only to operations where and when they can be successful, and under conditions where important values at risk are protected with the least exposure necessary.
- 3. Contain and control portions of the fire that are a threat to identified values to be protected.
- 4. Mop-up to the extent necessary to prevent escape of the fire and additional spread or damage to other values within the perimeter.
- Implement practices that reduce the potential for spread of infectious disease, such as distributed operations, adhering to CDC guidelines and other actions that improve the health environment for firefighters and support personnel.

General Situational Awareness:

- 1. Complete a good size up of your work area to mitigate hazards. 2. Be prepared for changing weather conditions.
- Minimize firefighter exposure to falling tree hazards.
- 4. Know who you are working for.

2023 SRF Lightning Complex (Branches XX, X & V) Weather Forecast

FORECAST NO: 22

FORECAST FOR: Fri, Sep 8th Day/Night Shift

FORECAST ISSUED: Sep 7th 2023, 2000 PDT

NAME OF FIRE: 2023 SRF Lightning Complex

SIGNED: /s/ Ryan Walbrun - IMET

WEATHER DISCUSSION: Another warm and dry day with little overall change in the weather pattern compared to the last few days. Skies should be mostly sunny with solar radiation continuing to dry the fuels, especially southerly aspects in brushy fuels. High temperatures will range from 90 in the river bottoms to lower 70s in smoke shaded areas around the Blue Creek #2 fire. Winds in the valleys and lower slopes will be diurnally driven with southwest canyon winds along the Pearch Fire and Highway 96. General wind flow for the Blue Creek #2 and Copper Fires will continue to be from the Southwest which will push smoke to the northeast towards the Happy Camp Complex. Humidity values will lower to around 25% during peak afternoon heating, especially southerly exposed aspects in brushy fuel types. Humidity values only lowering to around 40% under thicker canopy in north shading aspects or creek bottoms. Good humidity recovery lower slopes tonight with 40-60% upper ridges of Branch XX.

For Lost Fire and Branch XL weather, please see next page

FORECAST FOR TODAY: Some patchy morning clouds/fog otherwise mostly sunny. Light winds and low humidity.

FUELS: Primary fuels are conifer with litter and brush understory. The area has multiple burn scars adjacent to the fires with light fuels. Fire scars over 5-8 years old have a higher fuel load. Fire scars beyond 8-10 years old generally have a significant dead and down component with higher and more continuous brush that will support substantially higher rates of spread and intensity under dry conditions.

Outputs

General:

Clear skies and open canopies will be a key factor in potential fire spread over the next few days as the other weather conditions are fairly consistent. The continued warmer and dryer air will continue the drying process and aspect and slope will also effect fire spread. Overall, live fuel moisture in the timber and brush is about average or above for this time of year, resulting in slower fire spread compared to past years. In general fire danger indices remain below average for this time of year will be slow to rebound to previous conditions before the rain even over last weekend.

FIRE BEHAVIOR:

Branch X—Conditions will be conducive to limited fire spread today but are not a lot of heat sources near the fire perimeter as a result of the precipitation that has occurred over the last couple of weeks. Uphill spread is possible due to rollout under these conditions. Wind and dry slopes will be in alignment today.

Branch V- Minimal or no fire spread anticipated with limited heat sources near the fire perimeter.

Branch XX—Fire spread is possible again today but north facing slopes still maintain enough moisture to check up fire spread in that directions. In general, South facing slopes will be dry this afternoon and can support fire spread. Winds will be in alignment with dryer slopes today and as a result wind direction and small changes in aspect and wind direction will be a key factor in fire spread.

Branch XL /Lost fir--The continued good overnight recovery and high humidity during the day will keep fire behavior at a minimum for today.

Share these points with the public as you have an opportunity.

- The weather is warming and drying. The public can expect to see more smoke, mainly from consumption of fuels inside the fire perimeters.
- The rains have created a changed fire environment. Modeling experts predict a low likelihood of significant fire growth for the rest of the season.
- We are entering a window where conditions are optimal for removing excess fuels from the landscape using carefully managed fire. Agency administrators and fire managers are considering possible options for the days ahead.
- Structure protection equipment (hoses, sprinklers, etc.) will remain in place for now. They will be removed when all threat is gone, probably several days from now.
- Fire management decisions are a collaborative effort involving US Forest Service, National Park Service, California State Parks, Karuk, Yurok, and Hoopa tribal authorities, and many other cooperators working together.

WE WANT YOUR PHOTOS - Email them to 2023.lightningcomplex@firenet.gov or drop off at PIO trailer.

SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

***Operational Safety Standdown focus on IWI ***

- > MEDICAL INCIDENT WITHIN AN INCIDENT Review the Medical Plan (ICS 206WF) and Medical Incident Report (MIR or 8 Line) in the IAP and insure everyone understands how to initiate and run a medical emergency. Start by contacting Lightning Communications ICP on the Command Frequency and follow the Medical Incident Report. Your actions may be what save a life. I ask that you run a scenario in your division breakouts to make sure all are familiar with the plan. Do you know where your medical resources are and do the medical resources know where you are?
- ➤ HEAVY EQUIPMENT Heads up, heavy equipment is on the move and continuing operations on several Divisions on the complex. Ensure that all personnel are aware of safe working distances required for the equipment operating in their area. There are numerous control lines where masticators are operating the wood chucks that can be generated are especially hazardous. Maintain separation between equipment and firefighters.
- > FIRING OPERATIONS Ensure all firing and holding resources are provided a good briefing prior to starting operations. All resources should know where their safety zone is, the escape route, and trigger to use them.
- ➤ DRIVING AND SPEED Expect driving hazards around every curve and over every hill. Assume other drivers are distracted and may not be watching out for you. Drive at or below posted speeds. Keep your lights on, drive to the right side of your lane to provide an extra buffer when passing on coming vehicles. Use pullouts if people are tailgating, don't drive faster to create extra space.

If your assignment does not have purpose and meaning and does not support meeting the objectives, you should re-assess.
