#### **FIRE BEHAVIOR**

#### **GENERAL:**

- Trend continues with decreasing fuel moisture content (%) in dead 1/10/100hr fuels, such as grasses, pine needles, and timber litter; lower day- and night-time relative humidities (Rh) values. There is corresponding increase in the primary fire danger indices during this same period with energy release component (ERC) and burning index (BI) climbing towards critical threshold values associated with increased fire behavior.
- Some areas will see an increase in smoke(s) and other indicators of increased fire activity, such as an increase in creeping and smoldering near areas where fire activity was may have not been visibly present before. Monitor control lines and features that may be threatened in the future by this increase in activity over the next week.

#### SPECIFIC:

Branch X: Minimal fire activity most of Branch. Majority of isolated heat identified in IR mapping from 10/1 will be interior in DIV Y. Monitor for any heat or smokes near control lines. Residual heat will begin showing where fuels are available. Be careful when working around any hotspots, monitor for fire spread and re-burn potential and your safety.

Branch XX: Minimal fire activity throughout fire area. Monitor for any fire activity in areas where alignment of fuels, solar heating (sunlight), south aspects, and exposure to wind (accelerates drying). When traversing the fire perimeter visually assess areas where fire activity may threaten the line as conditions become more favorable to increased fire activity and spread.

#### AIR OPERATIONS:

Clear skies.

Sunrise: 7:12am, Sunset: 6:54pm, Daylength: 11 hours, 42 minutes, 51 seconds (-2:41min)

#### SAFETY:

The fact that fire behavior subsiding doesn't mean the hazards are reduced. Many fire weakened trees are left with the fire perimeter. Be aware and ensure work areas are cleared of snags prior to engaging.

# SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

#### SRF Lightning Specific Safety:

- On highway 96, Slate Creek Road, the "G-O" Road, Salmon River Road and on other roads, always be aware of traffic and unfocused drivers.
- Its hunting season, be on the lookout for hunters on and off the roadway. Drivers may be impaired and/or distracted.

#### CREATING A LEARNING CULTURE IN WILDLAND FIRE-

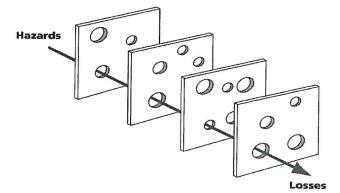

Consider these important points:

- A safety culture is dependent upon being a learning culture.
- A learning culture is dependent upon a culture of reporting.
- A culture of reporting is dependent upon trust, that is, firefighters willing to share openly because of the certain knowledge that leadership will respond in the best interest of the greater wildland fire community.

#### **Situation Awareness**

- Speak up if you see something that looks wrong!
- Get a good briefing prior to beginning your task!
- Ask if you don't understand!

Don't let the holes line up!

Do what you have to do to break the error chain!

#### Murphy's Fire Behavior Rules

- Winds will remain constant...until your burnout is lit
- Upon reaching the far side of the fire...all radios and batteries will cease to work
- A 3:1 gas/diesel mix burns hotter than a 3:1 diesel/gas mix...so does the person carrying the drip torch
- You are always short one lunch
- Leak-proof bags will...self-priming pumps wont
- Burning on the wrong side of the line will prolong the time of containment

Key Messages to share if you talk with the public:

- Firefighters have been working for days to build "boxes" of direct and indirect control lines around several of the fires in the Complex. Some of this work continues.
- The Incident Management Team, agencies, and tribal leaders have cooperatively developed a plan for using strategic firing operations within these boxes to meet incident objectives by fully containing the fires. Fire suppression in the present day can and does influence outcomes of future fires; by leveraging current fuels and weather conditions we can achieve both containment on these fires as well as improve the probability of success of protecting values for the next fire.
- Conditions continue to be optimal for implementing the strategic firing plan.
- Implementing the plan will be slow and methodical over multiple days. We will monitor effectiveness and make adjustments as needed.
- The public will see smoke as the plan is implemented, but this is expected and does not mean there is an increased threat to homes or other values at risk.

WE WANT YOUR PHOTOS — Email them to  $\underline{2023.lightningcomplex@firenet.gov}$  or drop them off at the PIO trailer.

WE HAVE A LOST AND FOUND - Drop off or pick-up at the PIO trailer.

MAIL DELIVERY - All mail delivery services are at ICP in Orleans and available for pick-up at the PIO trailer. For all mail, please include the incident name and your Resource Order Number.
