FIRE BEHAVIOR

GENERAL:

- Overall, expect a decrease in fire behavior in most areas around the fire from consumption of available fuels in the interior or from extinguishment. Be persistent in your efforts, there is still pockets of residual heat near the lines, either in heavy pockets of fuels or hidden in stump holes.
- Monitor afternoon winds in your area. Areas of the fire have been affected differently by forecasted winds
 on the incident. Just like fire behavior, get to know the different responses that affect the fire/heat in your
 piece of the dirt. Wind being a primary driver of fire growth and behavior, it is important to understand
 what kind of fire behavior to expect as conditions change.

SPECIFIC:

Branch X: Minimal fire activity throughout fire area. Monitor for fire/heat creeping through duff near control features, and effect of winds in the afternoon on known pockets of heat in heavier fuels for potential threats to the line. Heat holdovers in stump holes or standing trees can retain heat for a longtime without showing much smoke.

Branch XX: Minimal fire activity throughout fire area. Monitor areas on division that are holding heat where fuels such as duff, heavy dead/down woody material, stumps and in trees such as timbered areas. Duff creep near holding features like rock outcrops are known for providing a wick or stringer of duff that tracks along the edge of the rock.

AIR OPERATIONS:

Little if any impacts to air operations from smoke. Mostly cloudy early becoming partly cloudy by afternoon. Sunrise: 7:13am, Sunset: 6:53pm, Daylength: 11 hours, 40 minutes, 10 seconds (-2:41min)

SAFETY:

Common denominator of tragic fires ~ Innocent in appearance before unexpected shifts in wind direction and/or speed results in flare-ups or extreme fire behavior. In some cases, tragedies occur in the mop-up stage.

SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

Quote of the Day: Safety ends in Y but it begins with YOU!

Operational Considerations

Vehicle Safety

- Continue using good practices, seat belts, headlights
- Reduce speeds with poor visibility fog, smoke, rain
- · Reduce speeds with poor road conditions
- Always use a spotter when backing up a vehicle
- Don't become complacent when travelling to work location or returning to camp
 - o Weather and fire conditions have caused rock slides throughout the operation
 - o Always maintain situational awareness
 - o Request proper resources to assist with road hazards

Health Considerations

Good Hygiene

- Continue proper hand washing
 - o Especially before eating meals and after using restroom
- Avoid consuming foods that require refrigeration that have been out for a lengthy amount of time
- Temperatures will be increasing in next few days, ensure proper hydration
- Ensure you're getting proper rest

Other Safety Considerations

Situational Awareness / Medical Resources

- Be familiar where your EMS resources are posted for your operational period.
- Locations vary each operational period, factor in response time to get to you.

Medical Incident Report / EIGHT Line

- Review form on the back of the IAP
- Ensure you understand the information that is needed during an IWI incident.

Human Resource Message

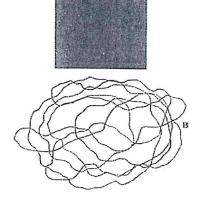

"Personal Boundaries."

Personal boundaries are developed through our attitudes, beliefs, and thoughts as well as from family, religion and society. Do you know your personal boundaries? Do you need personal space? What is your comfort level in describing your boundaries to others?

Some guidelines to follow:

- (1) respect each other's requests for personal space,
- (2) listen closely to each other's needs, and
- (3) know when to communicate your own needs to others.

One of these is a square and one is not. which one is the square?

If you are having trouble telling which one of the figures is the square, it might be time for a visit to the Human Resource Specialist.
