**3. Objective(s):**

**Management Objectives**

- Prior to engagement, stop and discuss strategies and tactics to ensure sound risk management principles are in place to provide for firefighter and public safety.
- Implement fire suppression activities in accordance with Incident Resource Advisors.
- Minimize impacts to communities, cultural resources, natural resources including critical power, communications and other infrastructure, private property inholdings, Tribal Lands, timberlands, T.E.S. Species, and watersheds.
- Effectively manage costs by selecting and implementing strategies based on values at risk.

**Control Objectives**

- MOSQUITO & MARLOW  
Keep the fires within the Six Rivers National Forest.  
Keep the fires within remote National Forest areas to protect heritage, cultural and natural resources.
- PEARCH  
Maintain fire within its current perimeter.

**General Situational Awareness:**

Steep and rugged terrain, active area for fire history and drought stressed trees.

In the COVID-19 environment, high density populations or large groups are particularly at risk. To help protect yourself, your family, and to ensure all employees return home safely, make sure to practice social distancing.

Enhanced hygiene (especially handwashing), PPE & monitoring practices help limit the infection rate of first responders.

Humidity values will be similar to Monday holding in the 40s and 50s over mid-slopes and ridges. By early afternoon, north-northeast winds will begin to increase over the ridges and exposed areas. Gusty winds along these areas will continue through the overnight hours into Wednesday morning before gradually diminishing Wednesday afternoon and evening. Temps on Wednesday will jump another 8 to 10 degrees as compared to Tuesday.

### FIRE BEHAVIOR

#### GENERAL:

- Overall, expect a decrease in fire behavior in most areas around the fire from consumption of available fuels in the interior or from extinguishment. Be persistent in your efforts, there is still pockets of residual heat near the lines, either in heavy pockets of fuels or hidden in stump holes.
- Monitor afternoon winds in your area. Areas of the fire have been affected differently by forecasted winds on the incident. Just like fire behavior, get to know the different responses that affect the fire/heat in your piece of the dirt. Wind being a primary driver of fire growth and behavior, it is important to understand what kind of fire behavior to expect as conditions change.

#### SPECIFIC:

**Branch X:** Minimal fire activity throughout fire area. Monitor for fire/heat creeping through duff near control features, and effect of winds in the afternoon on known pockets of heat in heavier fuels for potential threats to the line. Heat holdovers in stump holes or standing trees can retain heat for a longtime without showing much smoke.

**Branch XX:** Minimal fire activity throughout fire area. Monitor areas on division that are holding heat where fuels such as duff, heavy dead/down woody material, stumps and in trees such as timbered areas. Duff creep near holding features like rock outcrops are known for providing a wick or stringer of duff that tracks along the edge of the rock.

#### AIR OPERATIONS:

Little if any impacts to air operations from smoke. Mostly cloudy early becoming partly cloudy by afternoon.  
Sunrise: 7:13am, Sunset: 6:53pm, Daylength: 11 hours, 40 minutes, 10 seconds (-2:41min)

#### SAFETY:

Common denominator of tragic fires ~ Innocent in appearance before unexpected shifts in wind direction and/or speed results in flare-ups or extreme fire behavior. In some cases, tragedies occur in the mop-up stage.

# ***SAFETY MESSAGE***

*Fire fighter safety comes first on every fire, every time*

**Quote of the Day: Safety ends in Y but it begins with YOU !**

## **Operational Considerations**

### **Vehicle Safety**

- Continue using good practices, seat belts, headlights
- Reduce speeds with poor visibility – fog, smoke, rain
- Reduce speeds with poor road conditions
- Always use a spotter when backing up a vehicle
- Don't become complacent when travelling to work location or returning to camp
  - Weather and fire conditions have caused rock slides throughout the operation
  - Always maintain situational awareness
  - Request proper resources to assist with road hazards

## **Health Considerations**

### **Good Hygiene**

- Continue proper hand washing
  - Especially before eating meals and after using restroom
- Avoid consuming foods that require refrigeration that have been out for a lengthy amount of time
- Temperatures will be increasing in next few days, ensure proper hydration
- Ensure you're getting proper rest

## **Other Safety Considerations**

### **Situational Awareness / Medical Resources**

- Be familiar where your EMS resources are posted for your operational period.
- Locations vary each operational period, factor in response time to get to you.

### **Medical Incident Report / EIGHT Line**

- Review form on the back of the IAP
- Ensure you understand the information that is needed during an IWI incident.

**Safety Officers:**

**Team Safety Officers:** Doug McKelvey SOF, Matthew Lipson SOF, Kenneth Glazer SOF(T)

# Human Resource Message

## “Personal Boundaries.”

Personal boundaries are developed through our attitudes, beliefs, and thoughts as well as from family, religion and society. Do you know your personal boundaries? Do you need personal space? What is your comfort level in describing your boundaries to others?

Some guidelines to follow:

- (1) respect each other's requests for personal space,
- (2) listen closely to each other's needs, and
- (3) know when to communicate your own needs to others.

One of these  
is a square  
and one is not.  
which one  
is the square?

If you are having trouble telling which one of the figures is the square, it might be time for a visit to the Human Resource Specialist.
