#### FIRE BEHAVIOR

#### GENERAL:

- · Forecast precipitation will significantly moisten dead fuels, especially smaller-diameter fuels.
- · Some limited fire spread may occur prior to the onset of precipitation.
- Precipitation and high humidity will generally limit, and likely prevent, perimeter growth today.

#### SPECIFIC:

Branch X: Minimal fire activity is anticipated throughout fire area. Heavy fuels may continue to smolder through waves of precipitation. Expect debris rollout to continue on steeper slopes, including toward Hwy 96.

**Branch XX:** Minimal fire activity is expected throughout the fire area. Heat will likely hold over through precipitation waves in heavier fuels, particularly those that ignited most recently in Divisions O and R. Isolated smoke from smoldering fuels will remain visible in portions of the branch.

#### AIR OPERATIONS:

Air operations are likely to be limited by low clouds.

Sunrise: 7:19 am, Sunset: 6:43 pm, Day length: 11 hours, 24 minutes, 6 seconds (-2:39 min)

#### SAFETY:

Wet ash can be surprisingly slippery. Watch your footing while working in burned areas today.

## SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

TEAM SAFETY OFFICERS: John Nickey SOF1 and Rich Harnden SOFC Major Hazards and Risks:

- Hazardous Road Conditions: The roads today will be even more hazardous than usual due to the rain. Evaluate the road before you travel on it because yesterday's condition may not be the same as todays. Watch for the public traffic on wet roads that will increase the danger on all paved highways. Expect to encounter another vehicle around every turn. Keep to the right and stay alert.
- Personal Health: The lower nighttime temperatures will add stress to your already fatigued body. Remember to stay as warm as dry as possible. Even with lower temperatures, hydration remains important as your body's performance and resilience will decline when you become dehydrated.
- ❖ Team Transition: You will start to see new fire personnel shadowing the current team in place. Leadership has stayed the same today, make sure good communication is exchanged with incoming team and new resources.
- Suppression Repair: If you are working near heavy equipment, stay at least 100 feet in front and 50 feet behind equipment. In timber, distances should be increased to 2.5 times the canopy height. Never approach equipment until you have eye contact with the operator. Make sure you have good radio communication with equipment operators and are on the correct channel.

#### **HUMAN RESOURCE MESSAGE**

I've Learned....

I've learned....

That just one person saying to me, "You've made my day!"

MAKES MY DAY.

I've learned....

That no matter how serious your life requires you to be, everyone needs a friend to act goofy with.

I've learned....

That it's those small daily happenings that make life so spectacular.

I've learned....

That under everyone's hard shell is someone who wants to be appreciated and loved.

I've learned....

That to ignore the facts does not change the facts.

I've learned....

That everyone you meet deserves to be greeted with a smile.

I've learned....

That one should keep their words both soft and tender, because tomorrow they may have to eat them.

I've learned....

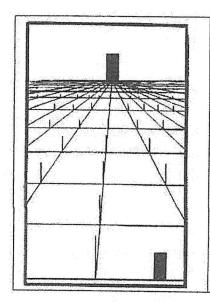

That a smile is an inexpensive way to improve your looks.

I've learned....

That I can't choose how I feel, but I can choose what I can do about it.

I've learned....

That it is best to give advice in only two circumstances; when it is requested and when it is a life threatening situation.

Which rectangle is bigger?

I've learned...that when it comes to optical illusions, the answer is always the simplest one.

They are the same size.

Human Resource Specialist: Karen Hartman

Keep up the good work!
