

Notes on BAKE/OVEN FIRE Infrared Flight  
09/09/06 Approximately 21:06  
Flight by plane 144Z CESSNA

Bar Complex, Bake/Oven Fire:  
The biggest problem with interpreting this IR data was that most of the heat is along the eastern section of this fire from north to south and it would have been nice to have a scan strip that would have had this front centered in the scanner view so that there is less likelihood of distortions. Since two paths basically displayed this section on each edge, distortions exist which made it difficult to pinpoint heat growth. I tried to be conservative due to this so, there may be more heat growth out there than is shown on the coverage.

**LEGEND**

- Intense Heat
- Fire Perimeter

0 0.25 0.5 1 Miles
