

Notes on Pigeon FIRE Infrared Flight
09/08/06 Approximately 21:06
Flight by plane 144Z CESSNA
Bar Complex, Pigeon Fire:
There is one section of my interpretation in the northernmost heat growth area of this fire that I was particularly unsure of based on the imagery. IR imagery shows heat growth in this section and then an additional patch of heat above the northern heat front. This heat patch appeared to be irregular and might be an anomaly in the scanner. I did digitize a line around it just in case.
