

Notes on RALSTON FIRE Infrared Flight
09/10/06 Approximately 19:00
Flight by plane N702 Piper
Ralston Fire:
There is a phase shift error that is causing the background imagery and all shapes to not match up correctly with the IR imagery. This is causing problems with accurately locating heat sources. The heat perimeter continues to grow to the east between the middle and north forks. There is also areas of growth between the rubicon and the middle fork.
