General Control Objectives for the Incident (include alternatives) MANAGEMENT OBJECTIVES <ul style="list-style-type: none"> The primary objective is to provide for firefighter and public safety throughout all incident operations. Without compromising safety, minimize suppression impacts to private property, riparian areas, South Fork Trinity River, and Late Successional Reserves (LSR). Adhere to the 2:1 work rest cycle. Address suppression cost accountability by keeping fire expenditures commensurate with public and private values at risk. Maintain clear and prompt information exchange with Forest, local communities and cooperators. Assume Initial Attack responsibilities within the Temporary Flight Restriction (TFR). FIRE BEHAVIOR FORECAST NO. 3

NAME OF FIRE: WALLOW
LOCATION: SHASTA-TRINITY NF
TIME AND DATE
FORECAST ISSUED 09:30 8/31/07

PREDICTION FOR: NIGHT SHIFT
SHIFT DATE: 8/31-09/01/07

PREPARED BY: Gene Rogers
GENE ROGERS, FIRE BEHAVIOR ANALYST

WEATHER SUMMARY:

See attached Spot Weather Forecast from Eureka Fire Weather Office

FIRE BEHAVIOR

GENERAL:

Low fine fuel moisture (5%) has contributed to fire spread and spotting. Again, only fair overnight humidity recovery is expected. The fire will remain active through the night where fuels allow spread. All dead fuel size classes will burn and consume. Expect backing fire spread and upslope movement in draws. Winds will be more calm than last night.

SPECIFIC:

One hour fuels will recover to about 8% at best, thus the fire will be active all night. Local fuel samples in manzanita leaves were 80%, thus the foliage of brush can contribute to fire spread.

Fuel Model 2 (grass) will exhibit 3 - 8 chains per hour with 2-3 foot flame lengths on slopes up to 40 percent. Pockets of brush, fuel model 6 are capable of exhibiting upslope runs of up to 17 chains per hour with flame lengths over 4 feet. Fuel model 10 (forest litter with heavy dead/down) will exhibit up to 2-5 chains per hour with 3-4 foot flame lengths on slopes up to 40 percent. Some single and group torching may occur. Short-range spotting will be possible through the shift. Fire behavior will be fuel and slope influenced.

AIR OPERATIONS:

Good visibility and flight conditions until dark.

SAFETY:

Many snags are in the fire area, watch for embers and falling limbs and chunks. Fire has weakened snags and live trees, beware of them falling.

- ***Driving***
 - Hunters / Public are on the roads
 - Be cognizant around every corner and turn
 - Dirt Roads are narrow
 - Higher speeds do not allow for proper reaction time to stop or allow for safe passage

- ***Snags***
 - Trees and limbs
 - Insure they are identified, marked and mitigated

- ***Poison Oak***
 - Identify and locate in your area
 - Avoid if possible
 - If exposed, utilize appropriate medical care if available
 - Notify Medical as soon as possible
