Oasis Fire Safety Message

Fire Behavior

Surface winds are influenced by several variables. Too often we hear a crew state that everything was going as planned and then the wind shifted. Expect localized wind shifts in the lower canyon areas and plan accordingly.

Expect erratic fire behavior

It is our inability to predict it that surprises us. Fuels, topography, higher temperatures and lower humidities... take the time to observe fire behavior and make the correlation with the weather.

We are all students of fire behavior

Wildland firefighting is very dynamic. Regardless of how many years of experience you have, there is always more to learn. Over confidence and complacency have been contributing factors in several near misses and fatalities.

Recognize early and act to prevent...
