GENERAL

A Fuels and Fire Behavior Advisory has been issued for California grass and herbaceous-dominated ecosystems due to above-average fuel loading.

The fire area contains grass, mixed oak, and brush, with grass being the main contributor to the fire spread. The grass is especially dense due to two good winters, making it hard to control as retardant and water cannot penetrate to the ground. It's important to note that the fire may still spread through the dense grass even if it appears controlled. If the fire spots across Dinkey Creek and onto the west aspect within the grass component, it could rapidly spread and transition into areas with a large amount of heavy fuels.

Specific areas of concern:

Division A - The fire's spread has been successfully contained within established lines. However, we must be mindful of unburned fuel patches within the containment lines. As surface and live fuels become more susceptible to ignition, there's always a potential threat of spotting that could impact the containment lines.

Division D - The containment line in this area is effectively holding due to the application of retardant, aerial resources and boots on the ground. It is important to note that the swirling winds around the bend of the creek may potentially transport smoke and embers to the east side, where there is a high fire risk due to the continuous grass fuel load.

Division M - This division is in good shape, however there are areas of unburnt fuel within the perimeter that could produce enough ember cast causing spotting concerns if enough wind impacts these areas.

Division U&Z- This division is looking very well. Roll-out could still cause some issues on the east end but that threat is diminishing as the heavier fuels consume.

Night - Downhill or down-canyon wind is expected during the night. The most significant impact from winds is expected in Divisions A and D, however, no significant spread is expected.

Air Operations: No anticipated limitations.

SAFETY MESSAGE

Mop Up is Hazardous Work!

- Injury and accidents are common during the mop up phase.
- Gather situational awareness in your work area and communicate it.
- Reduce risk by identifying and mitigating hazards.
- Stay focused on task, don't let the routine nature of the assignment allow your mind to wander resulting in a loss of situational awareness.
- Take frequent breaks, stay hydrated, and manage fatigue.

Keep Up On Your Personal Health

Maintaining peak performance requires that you take good care of your body.

Get the appropriate amount of rest, utilize sleep trailers if able to reduce cumulative fatigue as best as possible.

Proper Nutrition and hydration are critical to managing fatigue, take advantage of the available electrolytes provided.

INCIDENT ACTION PLAN SAFETY ANALYSIS (ICS 215A)

1. Incident Name:		2. Operational Period:		Date From:	7/7/24	Date To:	7/8/24
BASIN INCIDENT				Time From:	0700	Time To:	0700
Incident Area		Hazard/Risks		Mitigations			
ALL		Heat Related Fatigue & Overexertion		Remain hydrated, seek shade and take breaks to reduce exertion when and where possible.			
ALL		Driving Hazards		Driving and potential for collision with other vehicles (civilian or fire apparatus), pedestrians, wildlife or obstructions in roadway.			
ALL		Snags		Identify potentially fire weakened trees and flag as hazardous. Coordinate with DIVS to have qualified fallers cut down hazard trees. Avoid hazard trees, particularly during high wind. Mitigate snag hazard before inserting personnel for line construction.			
ALL		Rolling Material		Be alert for roll out of burning debris that can cause fire below you. Utilize lookouts. Do not have personnel working below you while digging line.			
ALL		Aircraft use: Fixed wing and helicopters		Coordinate helicopter use with air attack and helicopter manager. Ensure that personnel are clear of drop zone. Adhere to aviation procedures and refer to IRPG.			
ALL		Heavy Equipment Operations		Maintain awareness when working near operating heavy equipment, remain within view and communications of the operator(s).			
ALL		Medical - Lengthy patient evacuation/transport times		Plan to utilize air medical transport when transportation by ground could be extended. Stage ambulances in areas where extraction times will be extended.			
ALL		Entrapment - Spot Fire Suppression, Compromised Egress		Ensure LCES, Adhere to Fire Orders, Mitigate Watch Out Situations. Be aware of limited turn arounds for vehicles and narrow roads. Establish communications with ground crews.			
ALL		Slips/Trips/Falls		Watch footing and trip hazards. Maintain spacing while hiking and proceed slowly on steep slopes.			
ALL		Human Factors - Night Ops: Visibility, Fatigue		Once established, be aware Spike Camps may have minimal lighting at night, potential for wildlife interactions increased, and greater distances to medical treatment facilities.			
ALL		Burns - Ash Pit/Stump Holes		Ensure all appropriate PPE is worn, be alert hazards within the burn while moping up.
