# FIRE WEATHER FORECAST

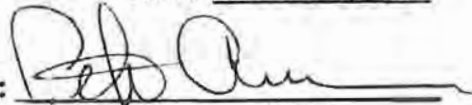

NAME: BASIN INCIDENT

FORECAST #5

UNIT: CA-SNF-000731

SHIFT: WEDNESDAY, JULY 3, 2024

SIGNED:

Pete Curran - IMET

TIME / DATE ISSUED: 1700hrs Tues 7/2/24

## WEATHER DISCUSSION:

A dangerous long-duration heat wave is underway with temperatures running several degrees above average and extending through the holiday weekend. Expect 3-5 degrees of warming each day thru at least thru Friday with warm overnight lows compounding cumulative heat stress. RH minimums will lower into the teens to bring an extended period of high fire danger coupled with high heat exposure. A diurnal wind pattern will maintain mostly light southwesterly winds each day thru the period with down canyon northeasterly winds at night. Strong high pressure aloft may contribute to a more stubborn inversion closer to the weekend, further reducing visibilities in the mornings.

**\*\*EXCESSIVE HEAT WARNING THRU 7/10/24\*\***

**WEDNESDAY:** Smokey under the inversion breaking mid-afternoon, then sunny, hot and dry.

**MAXIMUM TEMPERATURE (deg F):**  
90-100 degrees (upper/lower elevations)

**MINIMUM RELATIVE HUMIDITY:**  
20-28%

## **20 FOOT WINDS:**

Terrain-driven slope winds ENE 6-12mph early, then west 6-9mph with gusts to 15 mph

**Chance of Wetting Rain:** 0

**INVERSION:** Increasing subsidence inversion trapping smoke & haze over lower elevations.

**WEDNESDAY NIGHT:** Warming overnight lows. Mostly clear early, then smokey after 2am.

**MINIMUM TEMPERATURE (deg F):**  
70-74 (upper/lower elevations)

**MAXIMUM RELATIVE HUMIDITY:**  
42-48%

## **20 FOOT WINDS:**

Terrain driven downslope winds 6-12mph. Ridgetops NE 18mph

**Chance of Wetting Rain:** 0

**Moonlight Illumination:** 14% (waning crescent)

**INVERSION:** Increasing subsidence inversion with areas of smoke & haze over lower elevations.

## **THURSDAY 4<sup>th</sup> OF JULY OUTLOOK:**

Dangerous heat and low RH. T: 94-104 RH Min: 15-20% Wind: West 6-9 G14

**Night:** 67-73 degrees, 42-48%, down slope 6-12mph, Ridge NE 18mph.  
**Inversion:** Increasing subsidence inversion trapping smoke & haze over lower elevations.  
**Moonlight Illumination:** 14% (waning crescent)

### GENERAL

A Fuels and Fire Behavior Advisory has been issued for California grass and herbaceous-dominated ecosystems due to above-average fuel loading. Rapid fire spread is possible because of the cured grass fuel loading around the fire perimeter.

The fuels in the current fire area consist mainly of grass with mixed oak and brush contributing to the fire's progress. The grass crop is particularly dense due to two good winters, making it more resistant to control efforts as retardant and water cannot penetrate to the ground. It's important to note that the fire may still spread through the dense grass even if it appears to be controlled. The surrounding areas transition into brush and timber with large amounts of dead and downed fuel, especially to the north near Dinky Creek. As the fire reaches these live fuels, it is expected to slow down as they will not support the higher rates of spread seen so far. The indices for live fuel and heavier fuels are not as severe as the average for this year. Therefore, the aspect and fuels will be the best indicators for predicting the rate of spread (ROS) that will be observed.

### Specific areas of concern:

**Division A** - Fire in Division A is expected to keep moving west at the lower area of the DIV and northwest towards Sycamore Springs in the upper portions. It's crucial to consistently work on establishing and reinforcing containment lines and taking measures to prevent embers from crossing the line to maintain control over the fire.

**Division D** - Fire in Division D is expected to continue moving northward along Dinky Creek due to the influence of daily winds. The swirling winds around the bends of the creek may carry smoke and embers across to the east side, where the fuel is highly susceptible to fire due to the continuous heavy grass fuel load. If this happens, the fire could spread rapidly. It is necessary to make continual efforts to strengthen containment lines and take measures to prevent embers from crossing the line to keep the fire under control.

**Division M** - This division is in good shape, and any slop-over onto the north aspect will be more challenging to control. However, it should not spread as quickly in the heavier fuel types.

**Division U&Z** - The fire's progression has been successfully halted, but the nearby grassy areas are highly susceptible to spotting from rolling or general west winds.

**Night** - Downhill or down-canyon spread is expected during the night, and the fire is anticipated to remain active well into the early morning. The most significant impact from winds is expected in Divisions A and D.

**Air Operations:** Smoke will adversely affect operations early in the day.

### SAFETY

Not a day to drop your guard. Unexpected flare-ups are possible. Flare-ups will occur within unburned fuels.

## SAFETY MESSAGE

### Ask yourself “What Can Go Wrong”

- Identify the critical elements of your plan and ask “what if” a loss of one of these elements occurs.
- Identify the weak link in the plan. Where do you expect a problem?
- Develop a plan to deal with the problem(s) before they occur.
- Communicate the plan to all your personnel.
- Validate the new plan to ensure it matches the current situation.

Anticipate challenges so you can *respond*, rather than *react*.
