# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 24A	TYPE OF FIRE: Wildfire
FIRE NAME: SQF Lightning – Trout and Long	OPERATIONAL PERIOD: August 8, 2024
DATE ISSUED: August 7, 2024	TIME ISSUED: 1900 hours.

## WEATHER SUMMARY

**\*\* See Fire Weather Forecast for details \*\***

- Partly cloudy, cooler. Cumulus build-ups across the area.
- Max temps: 72-82°.
- Min RH: 19-27%.
- Slope/Valleys: Terrain driven 4-9 mph, becoming west/southwest 6-13/G17 mph after 1500.
- Ridges/Exposed: South/southeast 5-10 mph, becoming west/southwest 9-16/G22 mph after 1500.

## FIRE BEHAVIOR

### GENERAL:

*Fire behavior.* Conditions remain conducive for active fire behavior in any areas where slope, wind and solar heating align. Any unlined areas will continue to spread, areas with a grass component will produce more rapid rates of spread. Areas that have moved into timber understory will experience reduced spread rates but will produce higher intensity fire.

*Fuels are approaching critically dry levels.* Live fuel moistures, 1000 hr. and other dead fuels are at critical levels. Fuels include grass, grass with shrubs, shrubs, and timber with litter and understory. The timber litter and down and dead fuels are the major driver of spread, areas with little grass require high winds for rapid rates of spread.

*Topography.* The fires are burning in *steep, rugged terrain* characterized by deep v-notch drainages, prominent ridges, and meadows. The Trout and Long are burning in So. Fork Kern River tributaries. Elevation ranges on these two fires are between 7000-9500', and slopes range from 10-100%. All three fires have all aspects represented.

### SPECIFIC FIRE BEHAVIOR:

**Trout:** The threat of short-range spotting will remain but may be mitigated with the gradual cooling and somewhat higher humidity as the days progress. Heavy surface and ground fuels will continue to generate heat driving that possibility.

**DIV AA:** The fire approaching the indirect handline is expected to continue to spread, especially in the southern portion of the division. The fuels are relatively continuous in this division and will offer more resistance to control. Modeling indicates that you could experience moderate rates of spread under high winds.

**DIV DD:** The remaining area of concern is from around H-32 to the west, where the remaining heat is concentrated. Fuels in the majority of this division are much more discontinuous in most of this division so organized spread is not expected if spotting occurs. The 1000 hr. fuels and the timber litter are the fuels that are receptive to spotting and will promote further spotting as they ignite standing trees.

**Long:** No problems are anticipated.

### AIR OPERATIONS

No limitations are anticipated.

### SAFETY

The progression of the fire is working out well under relatively static conditions. Keep a heads up for changing conditions that may influence the rate of spread.

# **SAFETY MESSAGE**

## **SAFETY IS OUR FIRST PRIORITY**

*Fire fighter safety comes first on every fire, every time*

### **SAFETY THOUGHT FOR TODAY**

The longer you wait to make a decision,  
the fewer options you will have!

### **MAJOR HAZARDS AND RISKS TO THINK ABOUT TODAY AND TONIGHT:**

## **WHO'S WHO IN THE ZOO**

Two types of wildlife found in the Sequoia National Forest: Black Bears and Mountain Lions

### **Prevent Human – Wildlife Conflicts**

**BEAR SAFETY:** Maintaining a clean camp and a clean fire line will help mitigate keeping bears at bay. No food in tents or near sleeping areas. If possible travel in pairs so you have someone slower than you along!

Good job, you are reading the safety message!

**MOUNTAIN LION SAFETY:** If You Encounter a Mountain Lion

- Stay alert on trails.
- Never approach a mountain lion. Give them an escape route.
- DO NOT RUN. Stay calm. Do not turn your back.
- Face the animal, make loud noise and try to look bigger.
