 Hot and drier conditions than average will continue today, though highs will drop very slightly from recent days to just below 100. RH will also rise slightly closer to the upper teens. An approaching upper-level disturbance will enhance surface instability and winds. Gentle southerly winds in the morning will give way to enhanced west winds in the afternoon gusting up to 24 mph along exposed ridges. Conditions will continue to very slowly cool on Sunday though less mixing will help both slightly reduce RH again while also weakening west winds.

FIRE BEHAVIOR

GENERAL: Fuels consist of grass oak woodland with intermixed pockets of pine and chaparral. Fire behavior is primarily backing and flanking fire with the occasional uphill run as fire changes aspect changes and availability of fuel presents itself. Isolated pockets of heat remain within the fire perimeter consuming larger dead and down fuels.

FUEL MODEL	RATE OF SPREAD FT/MIN	FLAME LENGTH FT	SPOTTING DISTANCE	PROBABILITY OF IGNITION
Grass	50	15	0.1 mi	93%
Grass/Shrub	25	6	0.1 mi	93%
Brush	20	9	0.1 mi	93%

SPECIFIC:

BRANCH III: Steep terrain provides an environment where rolling material can ignite readily available fuels below. Be alert as light flashy fuels are receptive and can burn with greatest intensity and rate of spread when aligned with slope and wind.

BRANCH IX: Areas where the understory has been consumed and the canopy remains provide reburn potential as the canopy has been cured by ground fire. Large dead and down fuels retain heat and will continue to smolder.

CONTINGENCY: Elevated PIG coupled with receptive fuels provide potential for unplanned ignitions. Be alert of your work area and plan appropriately.

Forecast is valid for areas within 5 miles of fire perimeter

AIR OPERATIONS: **Sunset:** 19:19 **Sunrise:** 06:38
 Mixing height 8,000' AGL in the afternoon.

SAFETY

- Ensure escape routes are established and evaluated as rugged terrain can make use difficult.
- Establish LCES as winds are predicted to increase and change direction through the shift.
- Maintain situational awareness when working in areas where ground fuels have been consumed but canopy remains cured.

Fuels and Fire Behavior Advisory

California Wide

September 3, 2024 – September 16, 2024

Subject: Herbaceous fuel loads are above to well above average across most of California's grass-dominated systems, including typically arid deserts and valleys that often do not support fire growth.

Discussion: Precipitation and temperature alignments throughout the winter and spring of 2024 have resulted in an above average load of herbaceous fuels across many grass-dominated systems throughout California. The above normal grass and herbaceous load creates a continuous fuel bed, allowing for rapid spread of fires when these fuels are cured. The continuous nature of the herbaceous fuel bed is enhanced by remnant thatch resulting from herbaceous growth during the abnormally wet late summer and fall of 2023 and multiple consecutive years of above average herbaceous growth.

The combination of heavy herbaceous fuels with seasonably available dead woody and live fuels results in a highly flammable fire environment where rapid fire growth has been observed and is expected to continue for initial attack fires.

Difference from normal conditions:

Herbaceous fuel loadings in the California Coast Ranges, Sierra Foothills, and areas east of the Sierra Crest range from 120% to as much as 198% of normal. These fuels are fully cured at all elevations and across all PSAs in California where herbaceous fuels dominate the fire environment.

Concerns to Firefighters and the Public:

- Continuous and above normal fuel loading lowers the wind speed threshold needed to initiate rapid spread of fires during initial attack. Under what are typically low to moderate wind speeds, rates of spread and flame lengths are likely to exceed direct attack capabilities.
- Areas that typically resist fire spread, such as grazed areas and arid / semi-arid high valleys and deserts, may not slow fire growth or reduce fire behavior as expected.
- Heavy and continuous cured herbaceous fuels are highly available and may serve as catalysts for rapid fire spread in brush and timber fuel types.

Mitigation Measures:

- Modify tactics to account for expected rapid rates of spread and long-range spotting potential.
- Brief all resources on these conditions, especially out-of-area resources unfamiliar with local conditions.
- Consider augmentation of initial attack resources.
- Fire behavior prediction simulations using fuel models GR1 and GR2 are likely to underpredict spread; modification to GR4 or GR7 may be needed to accurately model fire spread in herbaceous fuels.

Area of Concern: Areas where herbaceous fuels dominate the fire environment across all PSAs and at all elevations in California.

Issued By: Predictive Services Units of Northern California and Southern California, in coordination with Cal Fire and Cal OES Fire and Rescue Division.

SAFETY MESSAGE

Complacency: “A feeling of quiet pleasure or security, often while unaware of some potential danger or defect.”

Don't become complacent in your work assignments. The fuel model allows fire behavior to increase rapidly, and a small incident can become a major incident in the blink of an eye.

Situational Awareness to identify, process, and comprehend the critical elements of information about what is happening to the team with regards to the mission. More simply, it's knowing what is going on around you.

HYDRATION

- ✓ Have enough cold water available for the entire shift.
- ✓ You are responsible for your daily hydration habits.
- ✓ Drink a minimum of one quart of water each hour.
- ✓ Remember that nutrition will keep your body healthy.
- ✓ Avoid carbonated and caffeinated beverages.
- ✓ Talk to your crew about Heat Illness prevention measures.
- ✓ Evaluate the work pace based on the day's assignments.

Ash Pit Awareness

- Observe the remnants of the vegetation model.
- Look for depressions in the ground.
- Be aware of potential for stump holes where trees may have burned.
- White ash may be an indicator of an ash pit.
- Ensure that PPE is worn and properly fitted.
- Utilize hoselines and hand tools to thoroughly extinguish hot spots that may threaten control lines.

INCIDENT RISK ANALYSIS

BR/DV	HAZARDOUS ACTIONS – CONDITIONS	MITIGATIONS – WARNINGS – REMEDIES	
ALL	HEAT & DEHYDRATION	<ul style="list-style-type: none"> • Drink water before, during and after shifts. Up to 1 ½ gallons per shift. • Review heat related emergencies (IRPG Pg. 110). • When over 95 degrees, break for a minimum of 10 minutes every two hours. • Seek shade during breaks. In areas of limited shade, utilize vehicles and A/C. • Be alert for signs of heat stress in yourself and others; use the buddy system. 	
ALL	TRAFFIC HAZARDS AND DRIVING	<ul style="list-style-type: none"> • Take extra precautions when entering or exiting the roadways. • Maintain high visibility when in the operational area and use warning lights when working on roads or traveling in smoke. • Many roads are narrow and mid-slope, with soft shoulders. Allow heavy vehicles to pass on the uphill side. Use spotters when backing or turning around. • Keep your speed down in all areas. Drive at or below posted speed limits. • Use chock blocks and turn wheels into hills. 	
ALL	STEEP TERRAIN & ROLLING DEBRIS	<ul style="list-style-type: none"> • Maintain 8'-10' spacing when working & walking. • Be mindful of footing and loose debris. Do not work above any personnel. • Evaluate the necessity to send personnel into areas with limited access. • Review and validate emergency plans in steep, remote areas. 	
ALL	FIRE BEHAVIOR	<ul style="list-style-type: none"> • Monitor weather conditions and forecasts. Make sure all personnel receive a briefing. • Critically low fuel moistures will contribute to rapid fire growth and rates of spread. • Expect spotting in receptive fuel beds adjacent to active burning. • Expect erratic, shifting winds in and around drainages. • Identify escape routes, temporary refuge areas and safety zones. 	
ALL	VALLEY FEVER	<ul style="list-style-type: none"> • Firefighting activities can generate dust in the air making the fungal spores airborne. • Limit personnel in dusty areas when possible. Consider use of N-95's. • When servicing equipment, stay upwind and use N-95 mask. • Consider wetting soil prior to disturbance, including LZ's, DP's, and dirt roads. • Stay uphill and upwind of soil disturbing activities such as heavy equipment use. • Remove dusty PPE and clothing after shift and launder frequently. Do not store it in vehicle cabs or sleeping areas. Monitor for Valley Fever conditions for 1-3 weeks. 	
K/H	STRATEGIC/TACTICAL FIRING	<ul style="list-style-type: none"> • Monitor weather conditions and forecasts. Make sure all personnel receive a briefing. • Follow the chain of command when undertaking burning operations. • Ensure that the aerial/ground ignition plans have been well briefed, including LCES and drought-related fire behavior considerations. • Wear and use appropriate PPE. • Initiate burning after ensuring the plan is authorized and understood by all. 	
ALL	HEAVY EQUIPMENT OPERATIONS/ SUPPRESSION REPAIR	<ul style="list-style-type: none"> • Ensure communications are established with operators. • Use hand signals if other communications are unavailable. • Maintain a 50'-100' exclusion area around equipment. • Use road guards as needed to control traffic. • Stay out of the dust. 	
A	SERPENTINE SOILS	<ul style="list-style-type: none"> • Avoid areas of serpentine soils that contain naturally occurring asbestos. • Be aware of asbestos exclusion zones identified on maps. • Ensure everyone gets a safety briefing. 	
H/K/O/R	LINE CONSTRUCTION	<ul style="list-style-type: none"> • Brief all personnel on Valley Fever hazards and prevention methods. • Consider use of existing trails and roads for fire control to avoid dust disturbance activities. • Ensure LCES are in place prior to engagement. Ensure safety zones are adequate. • Use the Downhill Fireline Construction checklist (IRPG pg. 7) 	
ALL	AIRCRAFT OPERATIONS	<ul style="list-style-type: none"> • Monitor Air-to-Ground frequencies, they are your eyes in the sky. • Use Air-to-Ground frequency to communicate with aircraft. • Use clear, concise statements when directing aircraft; CLEAR THE LINE! • Do not rely on aircraft: visibility & priorities can change quickly. 	
ALL	NIGHT OPERATIONS	<ul style="list-style-type: none"> • Maintain high visibility in the work area and wear vest while in roadway. • Use glow sticks to mark hazards. • Ensure personnel have a personal light (headlamp). • Watch for signs of fatigue. • Take breaks away from areas of known hazards. 	
ALL	MOP-UP AND PATROL	<ul style="list-style-type: none"> • Balance the risk of exposure to hazards against the mop-up objective. • Evaluate areas for hazard trees and locate stump holes for avoidance. • Review and follow "Look Up, Look Down, Look Around" procedures. • Evaluate mop-up distances against what is safe and necessary.
