WEATHER SUMMARY

WARM AND DRY CONDITIONS THROUGH THE WEEKEND

Lower elevations: Temperatures in the high 80s and minimum RH values in the mid- to low 20s. Upper elevations: Temperatures in the mid-70s and minimum RH values in the high 20s to high 30s.

Winds will be variable in direction, generally north/northeast at the beginning of the forecast period, becoming southwest by Sunday night. Expect diurnal wind speeds of approximately 3-5 mph, with gusts up to 10 mph. Overnight humidity recovery will remain below 50% and no rainfall is expected.

See spot weather forecast in IAP for additional details.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Fire danger indices (ERC, BI, SC) at the Alcalde RAWS are near their historic minimum values for the period of record after a several-day window of cooler temperatures and increased humidity. Fine fuels will respond quickly to the warming trend, however, and larger size classes remain seasonally dry and available. Expect active burning if fire becomes established outside control features.

Probability of ignition under peak burning conditions (south facing slopes, lower elevations, midafternoon) will be **60-80%** for the duration of the forecast period.

SPECIFIC:

Heavy fuels interior may continue to hold heat and produce isolated smoke, especially following shifts in wind direction, but no movement beyond control features is anticipated. Cured annual fuels outside the fire perimeter present the potential for equipment-caused ignitions during suppression repair activities. Areas where wind and slope align will support upslope runs in the brush.

REASSESSMENT CRITERIA:

Significant changes to weather or observed fire behavior. Date of interest beyond the September 15th expiration date of this forecast. Location of interest greater than five miles outside the Salt Fire area. Contact the local NWS office to request spot weather forecasts for any new incidents.

SAFETY

- Cured fine fuels outside the line are very receptive. Be prepared to react to new ignitions.
- Extended burnout times of heavy fuels can bring down fire-weakened trees and branches. Look UP before committing to a work or break area, and communicate hazards to others!

SAFETY MESSAGE

Drive Defensively!

Monitor Speed, Pedestrian Traffic, and Fatigue!

- **Demobilization:** Always perform a "Golden Circle" before driving. Check for and secure all loose items (i.e., tools, hose, packs). Always wear seat belts. Ensure personnel have adequate nutrition and hydration for the trip.
- **Driving Fatigue:** Monitor all drivers for fatigue. Switch drivers regularly if possible. Include routine rest stops to recharge in your driving plan.
- Valley Fever: Limit dust exposure. Utilize recirculation for A/C. For more information, please scan QR codes that are in base camp.
- L.C.E.S: Post Lookouts, ensure Communications and everyone is aware of Escape Routes and Safety Zones.
- Heavy Equipment: Establish radio and visual contact before engaging. Avoid working below operating equipment. Remain visible during operations.
- **Situational Awareness:** Continue to observe your specific environment and evaluate any changes that can affect your mission and safety. Know what is going on around you.

Steep Terrain / Rolling Debris

- Watch your footing while hiking in steep terrain.
- Be aware of loose rolling debris and rockfall.
- Do not work above other personnel.
- Watch spacing between firefighters.
 Maintain 8-10 feet.
- Evaluate the necessity to send personnel into areas with limited access.
- Maintain situational awareness.
