OUTPUTS

FIRE BEHAVIOR

GENERAL:

- Fuels within the ENTIRE burn area are drought stressed
- Watch for increased interior burning or hot materials near the control lines when the wind shifts to NW around 1400
- Very heavy fuel loading of oak litter and brush
- Fire growth is not expected unless embers escape containment lines and land in a receptive fuel bed

SPECIFIC:

All Divisions: Spot fires outside established containment lines or new starts...

Flame Lengths- Head fire up to 13 ft. in Grass, Up to 18 ft. in Brush, Up to 5 ft. in Oak Litter

Rate of Spread- Head fire up to 93 ft/min in Grass, Up to 58 ft/min in Brush, Up to 8 ft/min in Oak Litter

Spotting Distances- Up to 0.1 miles in Grass, Up to 0.25 miles in Brush/Oak Litter

Probability of Ignition- 80% at the peak of the burn period

AIR OPERATIONS:

Watch for snags and rolling materials if working around helicopter drops.

Sunrise: 0655 Sunset: 1905

SAFETY

Watch for hot materials rolling across containment lines while mopping up on steep slopes, especially with a receptive fuel beneath you.

If the fire escapes containment lines, do not go through the green to try and extinguish it. Fire can grow rapidly with the exceptionally dry fuels.

Don't become complacent! Identify your safety zones and escape routes.

SAFETY and HEALTH MESSAGE

We Are ALL Safety Officers !!!

INCIDENT: Tassajara CA-BEU-004217

DATE: September 22, 2015 TIME: 0700-0700

Major Hazards and Risks: Complacency, Fatigue,
Driving Hazards

Driving: Increase your following distance and drive with your headlights on.

Complacency: ALL PPE must be worn, including shrouds, when working on the fire line. Mop up requires your situational awareness even without active fire. Unburnt fuels can reignite suddenly and turn against you.

Fatigue: Manage yourself and those around you for excessive fatigue; many have driven long distances or been redeployed from other incidents. Use the buddy system and take breaks as needed. As fatigue increase, injuries tend to increase also.

Eat and drink fluids on a regular basis to maintain an appropriate energy level for any expected work assignment. Remember, you are the only one that knows your limitations.

Hazard trees: Survey your work areas for hazard trees, flag and restrict access, use only qualified personnel for tree felling. Review and follow Hazard Tree Safety, pg. 22-23 in your IRPG.

Aircraft: Monitor Air to Ground – at all times. Helco and Air Attack are your eyes in the sky!!

Fire Behavior: Fuels are severely drought stricken and are receptive to fire spread. Situation that shouts watch out: temperatures above 85 degrees, relative humidity under 25%!!!

Review your ICS 206 and follow the Line Emergency procedures.

Lookouts, Communication, Escape routes, Safety zones

Heat Illness Prevention:

- Drink plenty of fluids:
 - Water and Gatorade
- Avoid drinking energy drinks
- Rest when you can
- Find shade when you can
- Eat nutritious food regularly

Tailgate Safety

- **Accountability:** everyone checks in and everyone checks out. Supervisors know where their crews are at all times
- **Communication:** everyone knows the com- plan
- **Briefing:** everyone knows the game plan, everyone knows the contingency plan
- **Safety gear:** everyone has the appropriate safety gear and in good working condition

CAL FIRE INCIDENT MANAGEMENT TEAM WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

Fireline personnel- (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline.

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

Aviation Operations-

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214, Water Usage Reports) and develop a plan to replace water.

Public/Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.

Management and Supervision-

- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.
