We will see one last period of breezy north winds late this afternoon through the evening. A brief period of low clouds may impact the Ranch Helibase early this morning but should clear very quickly. Otherwise conditions become warmer and drier today with moderate ridgetop humidity recovery tonight.

**WEATHER FORECAST For Today:**

**WEATHER:** Clear. Possible early morning low clouds northern valleys.

<b>FIRE BEHAVIOR</b>					
<b>GENERAL</b>					
<b><u>LOCAL THRESHOLDS – WATCH OUTS</u></b>					
Combinations of any of these threshold factors can greatly increase fire behavior:					
<b>Thresholds:</b>		20' wind Over 7mph	RH Less Than 17%	Temperatures Over 98°	10hr fuel Less than 6%
<b>Forecasted</b>	<b>Ridges</b>	<b>10-12mph</b>	<b>18-25%</b>	<b>70°</b>	<b>6-9%</b>
	<b>Valleys</b>	<b>4-8mph</b>	<b>12-15%</b>	<b>82°</b>	<b>5-6%</b>
Coastal Sage Scrub fuel, primarily chamise and button brush, have seasonally low live fuel moisture for this time of year. Fire continues to burn in areas burned by both the 1999 Kirk and 2008 Basin Fires, and further south in fuels burned only once by the 2008 Basin fire. Snags, skeleton brush and heavy downed fuel are abundant.					
<b>Probability of ignition</b> : Day: Shaded 50% Unshaded 70%					
Night: 40%					
<b>SPECIFIC</b>					
<b><u>BRANCH III, IV</u></b>					
Temperatures will start cool with high humidity. This will drop and by late morning we should fire behavior start to increase. Winds will remain above the critical threshold on the ridgetops, but should be light in the valleys keeping any fire to creeping and smoldering. Large fire growth is not expected unless slope, fuels and winds align. In these conditions, short upslope runs may be possible. 1hr and 10hr fuels will recover by late morning and be receptive to carry fire.					
Tonight should see a rapid decrease in fire behavior by sunset. Fire will creep and smolder through the night with an occasional flare up. Fire spread will only occur in continuous fuels and where wind and terrain align.					
<b>AIR OPERATIONS</b>					
VFR conditions expected through the operational period.					
<b>SAFETY</b>					
Watch Out Situation 14 is emphasized today: <b>Weather becoming hotter and drier.</b> High pressure means warmer and drier conditions for the next several days. The potential for active fire behavior will continue.

<b>FIRE BEHAVIOR</b>																			
<p>Coastal Sage shrub fuel moisture, primarily chamise and button brush are running below seasonal averages. Abundant dead fuels remain from the 1999 Kirk and 2008 Basin fires. Many drainage bottoms did not burn during these previous fires and contain deep duff under timber and brush.</p> <p>10-hour fuels slowly recovering reaching values yesterday of 7% on the Cost Ridge, however values of less than 6% are considered critical.</p> <p><b>Probability of Ignition:</b> Day: 50-60%, Night: 30-40%</p>																			
<b>SPECIFIC</b>																			
<b>Branch VII:</b> Higgins Creek drainage will be sheltered by terrain from the general NNE winds, the ridge and upper slopes will feel the general winds. The drainage will see the lighter terrain driven upslope winds. Fire potential will be limited to short (to the ridge) slope driven runs in the afternoon and early evening.																			
<b>AIR OPERATIONS:</b> No known impacts to aviation.																			
<b>SAFETY:</b> Keep current with your weather and reevaluate as the conditions change and as you move about. Really focus on changes in wind direction and speed as well as fuel and slope alignment. Where will you go if things go bad?																			

Doing nothing is hard; you never know when you're finished.

# Soberanes Fire – Safety Message

INCIDENT #CA-BEU-003422

DATE: 9-23/24-16 TIME: 0700-0700 Day/Night

## Smoke Hazards

The pollutants in smoke can impair your judgement, and cause fatigue, headaches, breathing problems and heart disease. Consider that smoke impacts during the mop up and control phase can be especially high.

- When you can, step out of the direct path of smoke to limit your extended exposure.
- Rotate crews out of smoky areas for breaks, especially during mop-up and holding operations.
- Take tactical pause to prevent fatigue, irritation, and diminished capacity.
- Listen to your body- burning eyes, tight chest, headaches, or difficulty breathing are signs that you need to get out of the smoke.

## A Message From the Chief of the Forest Service

- Everyone, every day, returns home safely.
- Safety is not just a consideration in how we do our work; it is the essence of how we make decisions.
- We assess, analyze, communicate, and share risk before, during, and after incidents.
- We do not accept unnecessary risk or transfer it to our partners or future generations.
- Before, during, and after every fire, we enhance relationships.
- We create a respectful work environment for everyone involved in the fire.
- We learn from every experience and use that knowledge to improve.

## Driving

- Drive defensively! Expect the unexpected around every curve.
- **Where operationally feasible, rest drivers one hour before returning to camp.**
- Always fasten seat belts **before** the vehicle is set into motion.
- When driving, keep speed at or **below** the posted speed limit.
- **Stay as far to the right of the road as is safely possible.**
- **Stay away from soft shoulders on the downhill side of roads.**
- Allow opposing heavy vehicle traffic to **pass slowly on the uphill side** of narrow access roads, after ensuring there is adequate room.
- Watch out for debris and wildlife in the roadway.
- **Increase following distance between vehicles in dusty or smoky areas.**
- **Use a spotter** when backing or turning around your vehicle.

## Beware of Soft Shoulders

- Many incident roads have **soft shoulders** on the downhill side.
- Wheels may sink into these areas causing the driver to **lose control** of the vehicle.
- **Stay well away** from the downhill side of all roads.
- Allow opposing heavy vehicle traffic to **pass slowly on the uphill side** of narrow access roads, after ensuring there is adequate room.
- Increase following distance to **maintain visibility.**
- **Use a spotter** when backing or turning around your vehicle. Do a walk around if a spotter is not available.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the KX and IX reversed.

### On-Shift Time

On-shift time includes a combination of actual work, ordered standby, and compensable travel. On-shift time has a specific start and ending time and is recorded as clock hours. Each resource is responsible for ensuring they are meeting their 2/1 Work Rest Ratio and/or getting approval in advance from their supervisor and completing a Work Rest/Mitigation form to be approved by IC if working excessive hours. Submit the finalized document to Finance.

## Archaeological and Historical Sites Fireline Guidance for the SOBERANES Incident

One of the values we protect on our National Forest is Heritage Resources, this includes the preservation of Historic sites, Archaeological sites, and sites with traditional or sacred values.

Known archaeological sites are flagged for avoidance with blue flagging tape and yellow and black stripe flagging tape together. Do not compromise safety for the protection and preservation of archaeological and historic sites. When feasible and prudent:

1. ***Be on the lookout for prehistoric and historic sites.*** Prehistoric archaeological sites include boulders and bedrock with mortars and cupules, holes and grinding surfaces, temporary camps containing scatters of stone flakes, and deposits of dark brown to blackish soil with shell fragments (midden) occurring in layers or mounds on flat surfaces near sources of water, along coastal areas and wetlands, along ridges and saddles, and other areas suitable for camping. Historic sites include old wooden cabins, barns, corrals and other buildings, rock foundations and historic artifact scatters. These kinds of resources are often found in the same kinds of environmental settings as prehistoric camp sites.
2. Some archaeological and historical sites have not been flagged yet. If you observe artifacts, features, or sites, attempt to avoid dozing or driving through and/or parking on these sites, if feasible, especially with heavy equipment. Some sites can be protected through avoidance, or by carefully removing flammable materials adjacent to sensitive features, or by wrapping with protective fireproof fabric.
3. If you can't avoid sites, minimize disturbance as much as feasible, only clearing the surface to as minimal a depth and width as necessary.
4. Leave all artifacts in place. Some artifacts may have been intentionally placed for religious or ceremonial reasons.
5. When a site is discovered, flag it for visibility and report its location to a Division Supervisor. ***If feasible, plot locations of discovered resources on a map, and take a gps reading and photograph.*** Leave the information with an archaeologist (in the READ tent) so that sites can be relocated and protected during both the suppression and fire suppression repair phases of the Incident.
6. ***If you encounter a burial or human remains, cease work in the area immediately*** and contact the USFS Archaeologist. State law requires that the Archaeologist contact the Coroner, who will determine if the remains are part of a crime scene.
